RETROSPECT AND PROSPECT.

BY THE EDITOR

ALMOST unmeasured prosperity smoothed economic frowns from coast to coast last year, because opportunities existed, were recognized and embraced. This has been the case for so many years, with comparatively few and relatively unimportant breaks, that prosperity is becoming the theme of national platitudes. The wheel of Canadian development revolved rapidly during nineteen hundred and twelve. The more conservative, especially in older countries, commenced to question the solidity of the situation. That was a natural attitude. Nation building such as this country is tackling is not happening in many parts of the globe at one time. In past days, the peopling of Canada was an almost unobserved incident. Towns took a quarter of a century to grow. The people necessary to make it complete took a quarter of a century to arrive. To-day towns arise on the Western prairies, in Northern Ontario's timber, on British Columbia's rich soil, in the fertile maritime provinces, in a few weeks. That is because an average of one thousand people are entering Canada daily to claim a career, a home, citizenship, and their share of prosperity. It involves strenuous work to provide for nearly 400,000 new Canadians who come to us by land and sea every year.

The thoughtful onlooker has said he is not concerned about the distant future, but more as to immediate prospects. He cites our large borrowings abroad as one of the causes of uneasiness. That is because his hand has gone into pockets many times. He wants confidence in Canadian dividends to continue. The attitude is reasonable, but fears would probably be allayed were he to spend six months among us, examining the strength and the little weaknesses of the Dominion's development.

Wealth of One Year

He would find that in one year the factories turned out products valued at $1,164,775,532, that mineral wealth valued at $102,291,868 was raised, that the fisheries yielded $29,965,433, that from the forests were taken $166,000,000, and that the field crops returned $565,711,600, altogether a value for a twelve months' period of $2,028,744,433. He would discover that the crops from the Atlantic to the Pacific in four recent years had brought $2,038,000,000. Glancing at his ledger, he would see that the total borrowings from Great Britain have been approximately $2,060,000,000. So that our factory output and yield from natural resources in one year is equal to Canadian borrowings from the British investor to date. The value of field crops for four years would bring practically the same result.

Misgivings apparent last year as to the likely stability of the near future, were probably aroused by the wild speculation throughout the country in real estate, especially in suburban subdivisions. Undoubtedly large sums of money were buried in their earth. Realization of profits in numerous cases may remain a glib phrase for many years. Wherever is good fortune there also will fraud enter. Profits are made in Canadian real estate, if only for the reason that Canada is in the making, that new communities are growing each day, requiring land for their homes and farms and gardens, that necessities and luxuries, to which they have been accustomed in other lands must be provided. Real estate in Canada is one of the best investments, when purchased with open eyes, with proper advice and at the right price. That fact has led to highly speculative lot and land offerings, purchased in the electrical atmosphere created by salesmen, with closed eyes, without good counsel, and at ridiculous prices. But after all, that is a matter between vendor and purchaser. Its extent will hurt the country to some degree, but whatever adverse effects it may have, will be more than counterbalanced by incoming capital, railroad construction, the immigration stream, the increasing demands of the home market and the consequent employmeut of labor in divers industries.

Must Continue to Borrow

We must continue to borrow big sums of money for many years to come if we are to proceed with the settlement of the best arable lands in the world and of a young country with excellent prospects. So long as extravagance does not oust commonsense and conservatism, so long will interest be paid on borrowed capital and so long will the investor place his money. The real estate speculation is merely a natural instinct having its fling. Gambling there will always be. If it is not in real estate it will be in oil stocks, mining shares and other media, which give the gambler a run for his money, unlimited and uncertain excitement. That little failing is not peculiar to Canada.

Instead of being at the end of an active period of development, the Dominion is at the beginning of another era of growth. Among the signs are the results of the past year and the indications which extend well into the present year: Despite one of the most unfavorable climatic seasons, the Western provinces have produced at least 185,000,000 bushels of wheat, 224,000,000 bushels of oats, 49,000,000 bushels of barley, and 13,000,000 bushels of flax. That will realize over $200,000,000. Government statisticians tell us that of wheat, oats, barley, rye, flax, mixed grains and other field crops, Canada last year, when the final figures are received, will be found to have produced 909,390,500 bushels.

How Crop Acreage Grows

Year by year the acreage under cultivation increases rapidly. The increase in Manitoba wheat area in the latest ten years for which final official figures are available, 1901 to 1911, was 968,000 acres, or 48 per cent.; in Saskatchewan, 4,235,000 acres, or 903 per cent.; in Alberta, 1,582,000 acres, or 4,647 per cent.; and in the total wheat area of the Western provinces 6,784 acres, or 269 per cent. The gain in the production in Manitoba since the same date has been 10,000,000 bushels, or 20 per cent.; in Saskatchewan, 86,000,000 bushels, or 781 per cent.; in Alberta, 35,286,000 bushels, or 4,117 per cent.; in the total Western production, 117,000,000 bushels, or 185 per cent. These are remarkable increases. If the increase in the Western wheat area in the past ten years has been 269 per cent. and the gain in production 185 per cent., what will be the wheat area and production at the end of the next decade? My recent estimate gave a wheat crop in 1920 in Western Canada of 513,000,000 bushels grown on 34,321,000 acres. This was after allowing for greater attention to mixed farming, for increased railroad mileage, and other governing factors. The estimate has been considered as conservative.

Within the next ten years a fairly large amount of grain should be raised also in Northern Ontario and the newer parts of provinces other than in the West. For this, labor rather than capital is required. The gasoline tractor is helping to make new records of increased acreage, but the man who is content to take up comparatively few acres, is satisfied with a small outfit, remains on the farm with his family throughout the year, is a far more valuable settler than he who mines wheat with gasoline engines part of the year and migrates south for the winter.

Substantial Prop to Prosperity

The railroad construction contemplated during the coming twelve months will mean the expenditure of large sums of money and the employment of considerable labor. For many years the activity of the leading Canadian railway companies must act as a substantial prop to prosperity. Orders for new equipment of one road alone last year had a value of $48,000,000. The Canadian Pacific, the Grand Trunk, the Canadian Northern and the Grand Trunk Pacific ordered during 1912 over 700 locomotives and more than 43,000 freight cars. Their demands also for steel rails involved heavy tonnage. Locomotive plants, car foundries, rail mills, had full employment and enough to keep them going far into the current year.

The work of actual construction would have proceeded much more rapidly had labor been easier to obtain. Indeed, the completion of the two new transcontinental lines, the Canadian Northern and the Grand Trunk Pacific, can scarcely be achieved by the end of 1914 unless more sinew is available for track-laying.

The stream of immigration, therefore, can hardly be too heavy during the next few years. No signs exist of a decrease in that direction. Harvesting and railroad work are two enterprises which employ thousands of hands. Last year, the agricultural districts in almost every province sent up a continuous wail regarding lack of labor. Some farmers sold their lands because it was not obtainable. Others had to allow quantities of fruit and vegetables to rot because men were not there to pick and dig, despite offers of excellent wages.

Factor of the Immigrant

During the past immigration season, April to October, more than 300,000 newcomers were entered on the roll of Canadian citizenship. Their arrival mitigated the labor problem to that extent. Men who sought work got it. They brought with them, besides the power of labor, an appreciable amount of new capital. This came in the shape of actual cash and settlers' effects. A moderate estimate of the amount brought into Canada in this way by immigrants during the eleven years ended 1911 is $636,000,000.

More important than that, is the fact that each year our immigration enlarges the value and purchasing power of the home markets. We cannot introduce 300,000 new people to Canada without introducing also their demands for homes, furniture, food, necessities generally, and luxuries not a few. The effect on general conditions is obvious.

British and foreign capital continued its investments, although Canadian borrowings in London, through public flotations, were less than those of several preceding years. High credit was maintained. Market conditions checked the number of issues, as did also the rising price of money. Many Canadian borrowers, especially provincial governments and municipalities, issued short-term securities to tide them over what was thought to be a temporary market trouble. They will probably find that on account of a world-wide demand for funds, more for money will have to be paid. A Western city was one of the first to recognize that position, its issue being made in November at a 5 per cent. rate and at half a point under par. Many short-term loans expiring at various times this year probably will not be renewed. The sale of the long-term securities which have remained in strong boxes and bank vaults, awaiting a market turn, will most likely be effected and the higher rate of interest paid.

Capital by Private Channels.

British capital has come to Canada in large quantities in other than by way of public flotations. Large sums have been invested by English capitalists in farm lands, inside city and town property and in mortgages. United States money has persisted in its policy of establishing branch factories in Canada. The business men and financiers of the republic have shown an appreciation keener than others', of the opportunities existing in the Dominion. Various interests have worked hand-in-hand to obtain business. One man, for instance, has purchased municipal bonds for the installation of plant, and has seen to it that the order for the plant itself went in a friendly direction. A close understanding, although it may be unwritten, is apparent between industrial and financial men with eyes on Canada's possibilities. Dutch capital continued to be invested in Western mortgage loans and many other countries placed their quota in investments of various kinds.

Of the Trade Balance

A notable improvement occurred in the trade position during the past fiscal year. The total trade, including coin and bullion, amounted to $874,637,794, as compared with $769,443,905 in the previous year. Of the former sum, $315,317,250 represented exports and $559,320,544 imports. Our imports last year were $87,073,004, or 18.4 per cent greater than in 1911, when they were $472,247,540. Exports were $18,120,885, or 6 per cent. larger than in 1911, when they were $297,196,365. In 1911 our exports were approximately $4,000,000, or 1.3 per cent. smaller than those of 1910. In 1912, our exports were about $18,000,000, or 6 per cent., greater than those of 1911.

That makes a more pleasing trade balance. Among our imports last year were $26,000,000 of coin and bullion. Under imports also are entered large amounts of settlers' effects, agricultural implements, etc., which, while making trade balance figures look unfavorable, are not actually creating debt. Canada continues to trade with more than seventy countries. Complaint was heard during the year because Canadian manufacturers and others did not seek more business offering in foreign markets. The reply is the increasing demand of the home market.

Industry and Finance

Manufacturers generally enjoyed an excellent year. In numerous cases, plant extensions, new factories and warehouses were necessary to cope with the larger volume of business. This was reflected strikingly in the financial markets. A large number of stock and bond issues were made to raise funds for increased industrial activity. More than 4,000 new companies were incorporated. While many of these remain in the charter stage, a considerable number of charters were utilized in order to commence business immediately.

Capital and enterprise did not lessen their labor in raising minerals, the output of which last year was in excess of $100,000,000. The fisheries and the forests also yielded a large share of wealth, and, to a lesser degree, animal products.

For the first time last year, the total deposits in the chartered banks of Canada exceeded $1,000,000,000. This new record was set in May, when the amount totalled $1,002,247,561. Since then that item has remained above $1,000,000,000. The deposits withdrawable after notice, usually understood to be the savings of the people, added to those of the government, post-office and special savings banks, the building society, loan and trust companies give a total of $772,128,097 savings. With a population of, say, 7,400,000, the deposits per capita are $104. That is a creditable average for every man, woman and child in the Dominion.

Patronage of Good Securities

Despite the national tendency towards extravagance in certain channels—a condition usually accompanying prosperity—such a large amount of savings indicates that extravagance has thrift as a running mate. This is indicated in several ways, as, for example, the greater patronage of life insurance, and of good investments generally. The life insurance companies will show in their final figures of 1912 the largest business on record.

Another pleasing sign was the general disposition to ignore foolishly speculative and unworthy offerings. The Canadian investor, who is slowly becoming more of a power in his own country, eschewed worthless mining, oil, southern land and other stocks with which he was baited. This situation was created probably because of bitter lessons learned in the past and because so many excellent securities were offering in the legitimate market. As in other countries, the investor in Canada needs a higher rate of interest than 3 per cent. to meet the increased cost of living, which bobbed up in expected and unexpected places throughout the year. Small bond denominations were popular, and a successful effort was made by financial houses to appeal to investors with limited savings.

As to the Future

At the beginning of the new year we may look back upon many gratifying and substantial features of development. They are discounted only by comparatively few unfavorable features. Chief among these are the heavy fire losses, which again amounted to more than $20,000,000 last year. Another problem which the nation must face immediately is the question of rural depopulation. That, in an agricultural country especially, is a serious matter. These and other phases of Canada's nation building are discussed by various contributors in the following pages. Altogether, after making due allowance for the few adverse factors which necessarily enter in the work of peopling and developing a new country, we are safe in saying that Canada once again had a year of satisfactory development and prosperity Equally good are the innumerable signs which indicate that similar pleasing roads will be traversed during nineteen hundred and thirteen.

◆

CANADA IN THE INTERNATIONAL ARENA

Trading with More Than Seventy Countries and Drawing Capital From Many Lands, The Dominion is Attracting the Favorable Attention of Big Nations.

GRADUALLY the Dominion is elbowing its way well into the figures of international commerce and finance. With a total trade during the fiscal year of 1912 of $874,637,794, there was considerable business for importers and Canadian exporters. We purchased last year merchandise, coin and bullion valued at $559,320,544 and sold to the value of $315,317,250, and we traded with more than seventy countries. The purchasing power or the selling activities of Canada were felt in some shape or other on every continent.

Here is a broad classification of our trade, these figures excluding coin and bullion:—

Trade of Canada with	Imports.	Exports.	Total trade.
British Empire	$137,884,696	$170,155,221	$308,039,917
Foreign countries	409,497,886	145,162,029	554,659,915

The foreign country enjoying the greatest amount of trade with Canada is, as is generally known, the United States, although several other nations have a fair share, as the following figures illustrate:—

Trade of Canada with	Imports.	Exports.	Total trade.
United States	$356,358,179	$120,534,993	$476,893,172
Germany	11,090,005	3,814,914	14,904,919
France	11,744,664	2,123,705	13,868,369
Belgium	3,682,718	3,732,222	7,414,940
Japan	2,515,035	487,568	3,002,603

Canadian securities have been absorbed by British and foreign investors, publicly and privately, at the rate of more than $300,000,000 a year. Great Britain has backed Canada's development to date by more than $1,000,000,000. The United States has taken an interest in our industrial enterprises to the tune of nearly $500,000,000. France has patronized our manufacturing, railroad and other securities to the extent of $80,000,000. Germany has bought Western lands and coal. Holland and Belgium are now particularly interested in mortgages in the prairie provinces. A Turkish bank holds a block of $3,000,000 of Canadian railroad and government bonds. Thus is the Dominion being developed by its citizens, who speak many tongues, and by capital which flows freely from those countries which have money to lend for legitimate enterprises.

The appended figures give an idea of the investment interest in Canada of countries other than Great Britain and the United States. A careful estimate of the writer shows that foreign investors have placed approximately the following amounts in the Dominion:—

Country.	Amount.
France	$80,000,000
Belgium	12,000,000
Germany	33,000,000
Holland	18,000,000
Russia	1,500,000
Turkey	3,000,000
Total	$147,500,000

At this stage, therefore, when Canada is bulking large in the eye of Great Britain and foreign lands, the following articles by representatives of some of the countries interested in the upbuilding of our new country, will prove interesting. These stories have been prepared at the special request of *The Monetary Times*, and give a slight idea of the world-wide attention which the Dominion is attracting.

◆

GREAT BRITAIN

(By An ENGLISH BANKER)

[The following notes are contributed to *The Monetary Times* by a prominent English banker, and one who has kept himself informed regarding Canadian investments and development.—Editor *Monetary Times*.]

On the general question of the investment of British capital in Canada, the very large amounts raised on Canadian account from the English investor—though, no doubt, upon excellent security—will make it necessary for some time to come that Canadian requirements should be reduced as far as possible. At the same time it is not believed that London would be indifferent to the requirements of the provinces and of the leading cities if a more liberal view of interest rates were taken.

Capital Calls Are Many.

English capital is called for from many quarters, and is offered remunerative rates upon excellent security. Therefore, though very mindful of the closer connection with the Dominion, the English markets are not to be attracted upon the barest possible borrowing lines, and it would be wise if Canadian borrowers were to recognize that some liberality of view will be necessary for some time to come if new moneys are to be forthcoming from this side.

Higher Interest Return.

Apart from the special circumstances of the case, the world's monetary requirements, for all kinds of needs, has grown, and is growing, to such an extent that it is certain that a distinct rise of interest return is being established.

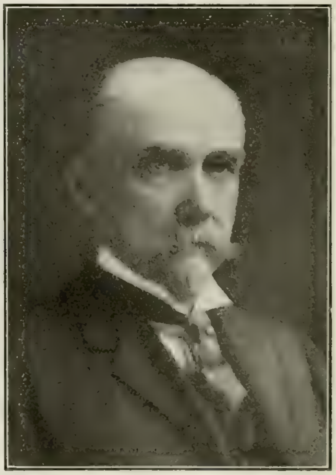
UNITED STATES

(By A. BARTON HEPBURN)

With rod and gun, during vacation periods, I have for many years made a study of the geography of all parts of the North American continent. Each province of the Dominion have I visited, and some of them many times. Last year I travelled from Montreal to Vancouver, during the heat of the political campaign which was then rapidly reaching its climax. The goal of my journey was Barkerville and the far north portion of British Columbia, where the waters divide, some of them seeking an outlet to the Arctic Ocean.

These journeys, though usually for the purpose of recreation, nevertheless give one a personal contact with and knowledge of the country and its industries which possess a practical value.

As a member of the Finance Committee of the New York Life Insurance Company, I have found my personal knowledge of the Dominion's affairs valuable on many occasions. The New York Life has investments in Canada at the present time—in bonds of your railroads, amounting in round numbers to $4,000,000; in municipal obligations of your large towns and cities, amounting in round numbers to $3,000,000; in real estate, in excess of $4,000,000. It is the policy of the company, as required by law, to invest in the Dominion of Canada the reserve against all of its Canadian risks. This avoids what otherwise might possibly be a criticism—that taking out a policy in a New York company by a Canadian, was in effect sending money out of Canada. The company, however, does not stop with simple re-



A. Barton Hepburn.

quirements of law, but has invested in excess of the reserve required.

I mention the above circumstances to show that Canadian investments and business conditions throughout Canada have been, and are, a subject of constant study and inquiry on my part.

Canada's Available Arable Land.

The area of the Dominion exceeds that of the United States, and, although climatic conditions prevent so great a diversity of products from the earth, and interfere to a considerable extent with the personal comfort and convenience of living, which go with a milder climate, nevertheless all of Canada's available arable land is bound to come into requisition all too soon, in furnishing homes for your growing population and the immigrants who seek to better their condition by making your country their own.

The greater advantages which go with a comparatively new and undeveloped country, Canada possesses in abundance. Forest and farm, mines and manufacturing, all the varied industries of our complex civilization, present inducements and opportunities which older countries no longer possess. Judicious investment in real estate must bring to the investor an "unearned increment" of large proportions. Farms not only support your own population, but are under requisition to supply the needs of the people across the Atlantic and the Pacific as well. The magnitude and variety of your mines are as yet little ascertained, because demand has not yet enforced their development. With the policy of protection, adopted by your people with the election of the present government, it is fair to assume that your manufacturing industries will receive a growth and enlargement resulting from your natural resources, plus all the advantages which a protective policy may be able to give.

Lord Beresford and Lord Desborough at Fort George.

Of a Remarkable Coincidence.

In March, 1911, Lord Desborough, president of the London Chamber of Commerce, gave me, president of the New York Chamber of Commerce, a luncheon at the Savoy Hotel. About seventy-five miles north of Ashcroft, on my British Columbia journey last fall, my motor car swung out from the main road to a precipice, in order to afford a view of valley and mountain, of wonderful beauty and grandeur.

I found three other cars just ahead of me, and recognized and greeted Lord Desborough as one of the party enjoying the view with Lord Beresford, whom I had met many times in New York, and the Duke of Sutherland, to whom I was introduced. Truly a remarkable coincidence, my second meeting with Lord Desborough. It is a far cry from the Savoy Hotel in London, to a log cabin roadhouse along the British Columbia express route, where we took our luncheon.

Seeking Canadian Investments.

These gentlemen were en route to Fort George, looking for real estate investments. This shows not only the confidence these important gentlemen had in the future of the Dominion, but it also shows, in the opinion of some, a disposition on the part of English landholders to reduce their holdings of real estate in England and Scotland and increase the same in the Dominion of Canada. Whether Lloyd George's scheme of taxation has anything to do with inducing the change of investments like the above, it remains that their judgment in seeking Canadian investments is eminently wise and justified by every consideration of business prudence.

The Dominion and the United States have not only parallel boundaries, but parallel interests, and kindred views and inspirations in life. Anglo-Saxon security obtains as to investments in both countries, and I look for more and more money of the United States to seek safety and profit in the various forms of investment which Canada affords.

FRANCE

(By "FLEUR DE LYS")

IT is difficult to estimate the exact amount of French capital invested in Canada, but it is rapidly approaching $100,000,000, if it has not already reached that sum. French investors hold industrial and railroad stocks and bonds. They have invested in a few municipal bonds, have purchased considerable areas of land, and have an interest in several mines. The greatest amount has been invested in loans on mortgages, and this is still one of the favorite channels in Canada for French funds.

In many directions, the cultivation of the French market by Canadian interests is being actively pursued. French-Canadian public men, who have lately been in Paris, have returned impressed with the evident desire of French capital to patronize Canada. It is realized that this disposition of French capital is of importance, not only on general grounds, but because it means the gradual rise of a second European market for Canadian securities. Within the past few years it has become obvious that London can scarcely absorb all the Canadian securities offered, so that a second market will be a help. Hence the marked cordiality with which French overtures are being received in Canada and the pains which are being taken to cultivate the Paris market.

Much French capital has come through private channels. What a great many people ignore is that a large number of Canadian securities have found their way to France, or are held in London and in Canadian trust companies for French holders. London underwriters find in France a large class of investors eager to take a substantial proportion of Canadian issues. This is not recorded in the statistics and no correct figure can be produced.

GERMANY

(By "INVESTOR")

THE trade of Germany with Canada has grown from $4,500,000 in 1893 to $14,961,000 in 1912. On account of the operation for seven years of the surtax on German imports into Canada, the trade declined from $13,000,000 in 1902 to $6,000,000 for a nine months' period in 1907. Since the removal of the surtax, the growth of trade has been rapid. Germany is hoping to obtain further tariff consideration from Canada than now enjoyed.

It usually happens that when German traders seek business, investors of the Fatherland seek investments. Naturally, there is a desire among the banks and financial institutions of Germany to retain capital for their own country rather than see it sent abroad.

It has been estimated by *The Monetary Times* at more than $30,000,000, and I agree that that is a reliable figure. At present there is not enough known in Germany of Canada to interest the banks to any considerable extent. The capital invested in the Dominion has usually financed the enterprises of men who have made a personal study of Canadian conditions and opportunities. That situation is likely to continue for some time.

HOLLAND

(By P. M. J. GILISSEN)

FOR several centuries, Great Britain and Holland have been the principal traders of Europe, and through their frequent contact with other countries, these two nations have been the pioneers as foreign investors in a great many distant countries. British foreign investments naturally have always been far more important, but, considering the size of Holland, there is probably no nation that has more money invested outside of Europe than the country of Queen Wilhelmina. In the first place, enormous amounts of capital are invested in the Dutch East Indies, and millions have sought investment in the United States during the last sixty years. Dutch capital went to China, Japan and South America, and Canada was not forgotten. Though at present the Dutch investments in Canada are not large, we find Holland again among the pioneer investors in the Dominion.

At the time the Canadian Pacific Railway was organized, it was difficult to find money to finance this project, but Holland was greatly interested, and of the second issue of shares, which was for $20,000,000, half was placed in Holland at 45. At that time, the leading financial paper in Holland issued a warning against investments in Canada, because it was a country where no man could live for six months in the year if he wanted to be outdoors for only half an hour! A prominent banker of the time, who took an active part in the introduction of the shares of the Canadian Pacific Railway, told me that he asked one of the leading papers to publish regularly the New York price of the shares, and that the reply was that the editor did not want to publish in his paper any quotations of stock that had no sound basis, and that it was only too well known that the Canadian Pacific Railway was an idle fancy, backed by some reckless financiers, whose only object was to get the money from the public!

Holland Sold, England and Germany Held.

We need scarcely say that the public who bought the shares at 45 were not so dull after all, and that they made a great deal of money on this first investment. They are probably sorry that they sold out too soon, for of a total of many million dollars bought at that time, little is left Holland, the Dutch holdings being only nominal now. Our neighbors, England and Germany, who kept on increasing their holdings, were wiser in that respect.

One might think that after this successful investment, Dutch money would have been poured into Canada. This, however, has not been the case, and it is a curious fact that for several years Holland has been indifferent towards Canadian investments. Even when other countries started to invest money on a large scale in Canadian mortgages, Holland remained behind, and it was not until the middle of 1910 that the first Dutch mortgage company started business. This company was so successful that the attention of Dutch investors was again called to Canada, and within a year, more than half a dozen new companies started business and as many others are being organized. All these companies make first mortgage loans on Western farms and city property, which yield an average of between 7 and 8 per cent. Against these mortgages they sell their 5 per cent. debentures to the investor in Holland. To date, the pioneer Dutch mortgage company has made loans in Canada amounting to 9,000,000 guilders, and the others combined have loaned between 15,000,000 and 20,000,000 guilders. (A guilder is about 40 American cents.)

Capital Turning to Canada.

If private capital is included, the total of the Holland capital invested in Canadian mortgages will probably amount to about 50,000,000 guilders. This sum is small compared with the enormous investments made by Great Britain and other European countries, but it all came to Canada during the last two or three years, and, as a great part of the public here is disgusted with the political agitations in the United States, it is likely that a large part of the money which formerly went to the United States, will be directed to the Dominion in future.

P. M. J. Gilissen.

Besides, Canada is well advertised here. The leading papers have entirely changed their ridiculous attitude of twenty or thirty years ago, and point repeatedly to the prosperity Canada is enjoying. It has been proved that something besides Polar bears can be raised in Canada! Many Holland mortgage companies are scarcely known in Canada, because these companies do not loan directly, but make loans through well-known Canadian trust companies. This system is liked by the Dutch investors, because they feel that the first years are most difficult, and that it is a great advantage to profit from the experience of such well-known companies. As most of the Dutch mortgage companies have their own offices in Winnipeg or some other Western city, it is not the intention to adhere to this system indefinitely, and as soon as they are sufficiently posted on the Canadian mortgage business, most of them will no doubt take the active management in their own hands.

Steel Shares Were Successful.

Besides farm and city mortgages, Dutch capital is now looking for other kinds of Canadian investments, but the companies in which Holland capital is interested are so diversified that it would be utterly impossible to name them all. The shares of the Dominion Iron and Steel Company, as one example, were successfully introduced on the Amsterdam market, and enjoy a fairly good market here. Between $1,000,000 and $1,500,000 are placed there.

As soon as Canadian industry develops, Holland will take the same interest it has taken in the United States industry in the past. The French saying, "L'appetit vient en mangeant," may certainly be used in connection with the Dutch investment market. Up till now, Canadian investments tasted well to the Dutch investor, and if the financial cooks take care that only the better dishes are served to the public, the appetite of Holland will certainly prove to be wonderful, especially as Canada is a country that can offer the Holland investor what he is looking for—a high yield and perfect safety.

AUSTRIA-HUNGARY

(By H. HANN von HANNENHEIM)

COMPARATIVELY little is known in Canada about Austria-Hungary, though in recent years many tourists from Canada have had the opportunity of enjoying the attractions offered by the magnificent sceneries of the country, the picturesque national costumes of the inhabitants, and by its splendid historical capitals and principal cities. The economical and commercial relations between the two countries are by far not so well developed as could be reasonably expected, and as would be desirable from the point of view of each of the two countries concerned. As to investments of capital from Austria or Hungary in Canada, scarcely anything has yet been done in this direction, the reason being that industrial development in many parts of Austria-Hungary has not been effected to the fullest limit, and any capital available is chiefly employed in promoting the home industries.

The import of manufactured goods to Canada averages the modest sum of somewhat over one million dollars annually, but would doubtlessly very much increase if Canadian importers could more fully realize the advantages offered by various lines of Austrian and Hungarian manufactures. Chinaware of every description, especially the more refined and artistically decorated kind, Bohemian cut glass and jewellery, beads, high-grade furniture, leather and fancy goods, various kinds of textiles and many other goods produced in that country could stand any competition, and if imported on a larger scale to Canada would give satisfaction to and certainly enjoy the patronage of consumers.

What Canada Can Sell.

On the other hand, not a few Canadian products could advantageously be exported to Austria-Hungary. The steady growth in the population of the monarchy during the last few years has brought the one-time considerable exportation of grains to a standstill; and probably before long Austria-Hungary will figure amongst the wheat importing countries, and thus afford a good market for Canadian wheat. Canned salmon, dried codfish, canned lobster, agricultural machinery, etc., could easily be sold on a large scale if imported direct into the country; equally so the products of Canadian mines, such, for instance, as asbestos and nickel. These are already well introduced in Austria-Hungary. Satisfactory development of commercial relations between the two countries is at present very much handicapped by the absence of a direct steamship line operating between the chief ports of the Adriatic and the Canadian Atlantic coast. Could this circumstance be remedied and Canadian concerns induced to examine more closely than hitherto the numerous advantages that would result from more intimate commercial relations, the outcome would doubtlessly be a surprising increase in the trade between the two countries.

As matters now stand, the most conspicuous feature in Canada's relations with Austria-Hungary is the importance of the immigration from the latter country. Few Canadians, indeed, realize to what a considerable extent these immigrants, though chiefly humble laborers, have contributed to the upbuilding of Canada's economic power. Many thousands of them, settled in the North-West, have become peaceful and industrious citizens of their new home country, and many thousands of others are spread over the whole Dominion, working on the new railway lines, in lumbering camps, mines and factories.

Immigration is Heavy.

In venturing an estimate of their number we must keep in mind that not only the direct immigrant from Europe, as shown by the statistics of the Dominion Immigration Office, have to be counted, but that also a good many of the immigrants from the United States are of Austrian or Hungarian origin. A fairly conservative estimate would allow us to put the number of all these Austrian and Hungarian citizens at present working and living in Canada at well over 300,000. Much has already been done by the Dominion and Provincial Governments to improve the conditions of the working class, to which most of these immigrants belong; and it is to be hoped that the efforts made with a view to bringing legislation upon the level corresponding to conditions in modern Europe will soon be successful.

DENMARK

By GEORGE E. DRUMMOND

AS the principal branches of industry of Denmark and Canada are the same, viz., dairy and agriculture, and they are competitors on the English market, great trade relations are consequently out of the question. In spite of this, the exchange of commodities, on which a trade can be established, has increased at a surprising rate during the last few years, as the following figures will show; and there is no reason why this satisfactory beginning should not be steadily increased to the mutual advantage of the two countries.

	Canada's export to Denmark.	Canada's import from Denmark.	Total turnover between the two countries.
1911	$443,035	$88,251	$531,286
1908	222,676	42,498	265,147
1901	55,902	11,367	67,269
1891	1,495	2,065	3,560

Imports from Denmark.

The principal items imported from Denmark are: rennet, cream separators, hides and skins, paper, seeds and porcelain, while the export to Denmark principally consists of: wheat flour, cereal goods, canned lobster and salmon, fruit, grease, agricultural implements, clover and other seeds.

The trade between Canada and the Danish West Indies has likewise grown considerably during the last few years.

	Canada imported from the D.W.I.	Canada exported to D.W.I.	Total turnover between Canada and D.W.I.
1911	$149,932	$16,966	$166,898
1908	870	36,578	37,448
1901	1,878	9,688	11,566

Sugar from West Indies.

Here the import consisted exclusively of sugar and molasses, while the export articles were fish, butter and ieese, breadstuffs and lumber. This turnover will, no oubt, be considerably increased if St. Thomas, D.W.I., made a port of call for the steamers of the new lines be established between Canadian ports and those of ritish West Indies and South America.

As a seafaring nation, the Danes have always held eir own, and it is no uncommon thing to see the anish flag fly in Montreal harbor. In 1908, for in- ance, it ranked as No. 3 in number of ocean-going ips, viz.: British 522, Norwegian 206, Danish 13,

George E. Drummond.

merican 2, French 1. In 1911 there arrived in Canada nder the Danish flag thirty ships with a registered tonage of 41,566, while thirty-three with 45,891 registered onnage departed under the Danish flag.

anish Immigration and Investment.

The Danish immigration is not as considerable as ie Canadian Government might wish it to be, owing the ideal circumstances under which the small Danish armer thrives at home, and the Danish Government aturally does not encourage emigration of what forms he backbone of the nation. The average number of Danish immigrants to Canada amount to 600 per year, o which may be added 250 from Iceland. Of these, the reater part are farmers, and settle principally in Alerta and Saskatchewan, while nearly all the Icelanders ettle in Manitoba, where they form a colony of 15,000. he Danes in Canada number about 20,000.

As to Danish investments in Canada, cases do now nd then come under my notice from which I judge hat quite a considerable amount for so small a country s invested in Canada. These are principally in British Columbia, Vancouver and surrounding country and in lberta, where goodly sums have been invested, prinipally in real estate and first mortgages.

ARGENTINA

(By CARLOS A. GALARCE)

CANADA and the Argentine Republic are two countries which, geographically speaking, are far removed from one another, yet in spite of the dis- ance which separates them maintained considerable ommercial relationship, which, although not increasng with the rapidity that could be desired, is steadily ugmenting year by year.

In speaking of these two countries, it should be emembered that both are young; both are in the first stage of their evolution; both are producing articles of prime necessity, articles which command an easy market and which are in ever increasing demand. As is the general case with new countries, these have their own special characteristics and both of them incline, as is natural, towards the satisfaction of their own immediate necessities, while leaving to the care of the outside world the sale of much that they produce. This may in some way explain the fact that Canada and Argentina do not effect their mutual exports and imports directly instead of carrying on their trade by some outside medium and thus causing an increase in the prices of the products placed upon both markets, without any increased advantage to either buyer or seller.

Might be Advantageous Interchange.

Perhaps it is not generally realized to how great an extent the apathy mutually shown by these two countries is keeping both from what might be an enormously advantageous interchange of commerce. I believe that this apathy really exists to an unfortunate degree and base this assertion upon what has been my personal experience since I have been in Canada. To give one example: About six or eight months ago, a firm of fruit exporters in Argentina wrote me asking for prices and conditions for buying apples. With the very efficient help of the department of trade and commerce, I obtained the addresses of the principal apple exporters in the country and the result of my thirty or thirty-five letters of enquiry was nil. Not one of these firms thought it worth their while even to reply on the subject of what might have been a very profitable commercial transaction and neither did they write directly to the firm interested in Argentina as suggested in my letter. When a little later, I observed that apple growers were publicly making complaint of the want of a market for their products, I began to see how great an opportunity Canada is allowing to slip in not dealing directly with foreign markets. I found myself in the unfortunate position of having to advise the Argentine firm to look for apples elsewhere. Do the exporters of Canada sufficiently appreciate the efforts of their department of trade and commerce as they should? is a question which has occurred at times to my mind.

Carlos A. Garlarce.

Through Medium of Third Party.

The exports from Canada to Argentina have reached the amount of three millions of dollars, making Argentina therefore, according to the report of the department of trade and commerce, (Part 1, 1911) the country which takes the next rank after the British Empire and the

United States in its buying from the Dominion. Of the $17,000,000 which Argentina spends upon lumber, only $2,540,000 are paid for that received directly from here, in spite of the fact that Canada is one of the greatest lumber producing countries. In the case of printing paper, the figures which appear in the reports show that Argentina has spent $1,416,000 on that article and that only $39,000 of that amount has been to the direct benefit of Canada. The reports of the large sums spent upon these same articles in the United States, lead to the conclusion that Argentina must be buying many Canadian products through the medium of a third party.

The imports from Argentina are not less than the exports to that country from Canada, and therefore, it will be seen that there is an equilibrium of commercial interchange between the two countries. The principal articles which Canada imports from Argentina are hides and wool, the first to the amount of $2,245,000 and of the second, some $60,000 approximately. These two articles are imported via the United States and therefore these and many other Argentine products do not appear in the statistics as such on account of their having been shipped to Canada from other parts than the Argentine home ports. In the case of meat, of which a great amount is imported and corn, which is well known to be bought by New York merchants from Argentine firms, and resold to Canadian buyers, it is notable that the price of these articles is increased almost 25 per cent.

Trade Now Amounts to Six Millions.

It is obvious that there is still much to be desired in the interchange of commerce with mutual benefit, between Canada and Argentina. However, in spite of this, the trade between the two countries, which ten years ago only represented a sum of $170,000, has increased little by little until in last year's report six millions of dollars was the amount to which it has now reached.

It is not for me to discuss in a short article whether or not this commerce between Canada and Argentina would be materially benefited by the establishment of a line of steamers directly communicating with the two countries, or whether such an enterprise will not be in the future the natural result of increased commercial relations between them, but I would desire to suggest that there should be a little more mutual understanding between the buyers and sellers of both countries and that everything possible should be done to eliminate the evils which arise from the commercial go-between who is depriving both countries of the profits which might be obtained by direct interchange of their products.

VENEZUELA ——

(By LEOPOLDO TERRERO)

THE importance of the trade between Canada and Venezuela does not depend on its actual worth, but on the fact of its existence under the adverse conditions now present. The most necessary measure for the improving of the trade is the obtention of facilities in transportation by a less roundabout way. The commercial communication of Canada and Venezuela is incomparably tortuous, and goods go through as many hands as conveyances.

That trade does exist, demonstrates the possibilities of a very substantial rapid development of business. Everything points to that conclusion—the diversity of productions, the comparatively short distance, the growth of Canada, and the unprecedented financial condition of Venezuela.

The administration of General J. V. Gomez has centred its efforts in the opening of new roads to commerce. The creation of a Consulate General in Canada is a part of this plan. Ten per cent. of the entire budget for the fiscal year 1912 is set aside for building macadamized roads through the country, and subsidies are paid to fluvial and coast steamship companies. Encouragement is given to railroads, and the payment has been decreed of an old debt of millions to an English railroad company.

L. Terrero.

The efforts for the fostering of the trade relations of Canada and Venezuela must lie with the governments of the two countries for the present. Manufacturers are always disposed to open new markets for their articles, but produce merchants are generally content with established business. Produce, like timber, wheat flour, paper, coffee, rubber, etc., will be the base of this trade.

JAPAN ——

(By H. ARITA)

IN its present stage, the trade between Canada and Japan cannot be said to be large, though that of 1911 amounted to above $3,000,000, showing an increase of 90 per cent., compared with that of ten years ago. The principal Canadian articles which are exported into Japan are wheat, flour, fish, metals, dairy products, wood and its manufactures, while the chief Japanese articles exported into Canada are green teas and silk goods. It is, however, noteworthy that even these are only a very small proportion of the total importation into both countries. The importation of Canadian wheat flour into Japan does not equal 4 per cent. of the Japanese total importation of that article, and her importation of Canadian dairy products equals only 2 per cent. It is the same with the Japanese exports. Japanese green teas and silk goods are respectively 50 per cent. and 7 per cent. of the total of those goods imported into Canada from all countries.

The following table of imports, showing the average value of importations during 1909, 1910 and 1911, will give an exact description of trade conditions between the two countries:—

To Canada.

	From Japan.	From other countries.
Green teas	$737,132	$1,441,842—50%
Silk goods	404,243	5,848,128— 7%

To Japan.

	From Canada.	From other countries.
Wheat flour	$40,334	$ 812,222—4%
Wheat	......	1,407,142 ...
Condensed milk	22,610	1,132,642—2%

Among many Canadian products, hair, feathers, down, tusks, horns, hides and skins, beef, dried and canned fruits, senega roots, mechanical pulps, animal fats, cedar woods, etc., may find a wide market in Japan.

As may be seen from the above there is much margin for the extension of a mutual market for the staple goods of each country between Canada and Japan.

"Britain of the Orient."

That "Japan is the Britain of the Orient," is a common expression among writers about the former country. This is true from the fact of Japan's resemblance in many points to Britain. This expression is used here in explanation of Canada's connection with Japan. Japan and Britain are similarly situated on both sides of Canada; one on the opposite side of the Pacific Ocean, the other on that of the Atlantic. Vancouver and Victoria, the seaports in the West, correspond to Montreal and Quebec, the thriving harbors in the East. As a natural consequence of the development of Western Canada, this geographical position of Japan may ultimately give her a standing in Canada, only inferior to that of Britain, her mother country. Japan will, therefore, become in the future, in a commercial sense, the Britain of the Orient, in her trade relations with Canada.

For these and many other reasons (among which are the completion of the three Canadian transcontinental railways, the development of Pacific shipments, etc.), we arrive at a very favorable conclusion as to the future of this mutual trade.

Expiration of Treaty.

In conclusion, it may not be out of place to add a few words regarding our treaty relations. The Anglo-Japanese Commercial Treaty, in which Canada participated in 1906, expired last year; and since then, to our great regret, Canada has not adhered to the new treaty. At present there exists only an arrangement, which guarantees the most favored treatment to each other's products. This present status is, of course, only a temporary one. But in any case, Canada's adhesion, as soon as possible, to the new Anglo-Japanese Treaty is most desirable for the future of the trade between the two countries.

NOVA SCOTIA

By Hon. G. H. Murray, Premier

HON. G. H. MURRAY.

NOVA SCOTIA has advanced steadily and substantially during the past year. Our industrial output is annually increasing in volume, and, while there is room for very large development in all our sources of wealth, we have good reason to felicitate ourselves upon the progress thus far made. There has been a strong and steady demand for our coal, our steel, our fish, our lumber and the products of our farms and orchards, and it is not too much to say that this province has now well entered upon an era of industrial expansion hitherto unknown in the Maritime Provinces.

The strength of Nova Scotia lies in the abundance and diversity of our resources. Providence has placed rich fruit lands, productive marshes and fertile valleys in close proximity to the coal and other mineral areas of Pictou, Cumberland and Cape Breton. Moreover, these fruitful lands are bordered by the greatest fishing waters in America, which are exploited by as hardy and successful fishermen as can be found in the world.

There is not a town or village in the province which does not hold some latent opportunity for enterprise. It is my aim to cultivate among my countrymen that faith in our province which will surely come from a more intimate knowledge of our great natural resources. I believe that Nova Scotia is amply endowed for the sustenance of at least two million people. What is needed more than aught else is a larger spirit of optimism that will encourage the introduction of new capital, the establishment of new industries and the infusion of new life.

G. H. Murray

PRINCE EDWARD ISLAND

By Hon. J. A. Mathieson, Premier

HON. J. A. MATHIESON

THE people of this province have special reason to look forward with hope and confidence in the coming year. The increase of subsidy recently allowed this province on account of its claims for non-fulfilment of the terms of union has placed it upon a sound financial basis. The agreement with Canada by which the Island is empowered to lease the areas around its coast for oyster cultivation promises to open the way to a rapid and great development of this most valuable fishery. The progress in agriculture is steady and strong.

The construction of the car ferry and standardizing of the railway gauge will link us up to the transportation system of the mainland, reduce the cost of carriage and give a great impetus to every industry.

Efforts will be made to provide greater accommodation for tourists, to whom this Island offers attractions unsurpassed elsewhere. For these and other reasons the prospects for 1913 are the brightest in our history.

J. A. Mathieson

NEW BRUNSWICK

By Hon. J. K. Flemming, Premier

HON. J. K. FLEMMINC.

THE past year has been one of general activity. The season has been abnormally wet, thus making it difficult for the farmers, both in seeding, caring for, and harvesting their crops. The same conditions have made it difficult for all outdoor work. Despite that, nineteen-twelve will certainly be a red-letter year in the history of New Brunswick. The development at the port of St. John, including the construction of a large and modern dry dock, as well as increasing enormously the shipping facilities of the port, the construction of the St. John Valley Railway, the construction of the Gibson and Minto Railway, the utilizing of natural gas for light, heat and power purposes, are all new, and belong to the year 1912.

Business conditions have been satisfactory. Real estate has been active at St. John, and there has been noticeable increase in values all over the province.

In regard to the outlook for 1913, it is of the brightest and most hopeful kind. Our people are optimistic as to the future. More people are coming to New Brunswick; quite a few are settling in the province; our agricultural and fruit lands are becoming better known; our industries are increasing and expanding.

I expect to see the next few years bring a wonderful transformation to this part of Eastern Canada.

J. K. Flemming

QUEBEC

By Sir Lomer Gouin, Premier

QUEBEC'S progress during 1912 has neither fallen short of the estimate which I ventured to make for *The Monetary Times* a year ago, nor has it disappointed either its friends and well-wishers, or those who are entrusted with the management of its provincial affairs. Its increase of population, as shown by the census of 1911, only made public since the printing of my last forecast, has been more than 25 per cent. during the last decade, or from 1,648,898 in 1901 to well over two millions in 1911. This increase has been almost entirely from within, and will undoubtedly continue. The great majority of the people of the province of Quebec marry young and are blessed with large families.

We are now looking for a larger augmentation of our population from without than we have had for many years past. The opening up of rich agricultural lands in the new and northern Quebec, traversed by the line of the Transcontinental Railway, particularly in the districts of Temiscaming and Abitibi, and the increased publicity given the claims of the Eastern Townships—the Garden of Eastern Canada—both by its own enterprising citizens and by the provincial government, have attracted wide attention abroad, and it is not unreasonable to expect, in consequence, a large increase of immigration, both from Europe and from the United States. This promised immigration will bring with it, no doubt, a considerable amount of that capital which is so essential to the development of our enormous provincial resources.

SIR LOMER GOUIN.

The experience of the West is likely to be repeated in the East. Former Canadians, and the descendants of former Canadians in the United States, desirous of bettering their conditions, have already, in many instances, left their temporary homes in the Eastern States to return to the province of Quebec. Several of them have brought back considerable savings with them. It is hoped that thousands of others, realizing the new era of prosperity which has opened for this province, will follow their example.

The annexation of Ungava, by which the province has doubled its former area, opens new doors for enterprise and development, and the coming year will witness important exploratory work by the government in the far north, to be most certainly followed by the northern advance of capital and industry.

Agricultural and mining development, liberally encouraged by the government's good road policy, are making, and must continue to make, unprecedented progress; education, whether elementary, superior or technical, was never so richly endowed by government before as it is now; the pulp output is about to be largely increased by the opening of enormous new mills at Jonquieres and elsewhere during 1913; Montreal, Quebec, St. Hyacinthe, Sherbrooke, Three Rivers, Chicoutimi and other manufacturing centres are making marvellous progress in production, population and wealth, and nothing but increasing activity, prosperity and happiness is in sight for the province of Quebec during the coming year.

Lomer Gouin

ONTARIO

By Sir James Whitney, Premier

THE outstanding feature of Ontario's progress during the past year was the acquisition of the great northern area now known as the District of Patricia. As this country is about 150,000 square miles in extent it adds more than 56 per cent. to the dimensions of the province. Our interests extend beyond the boundaries of the district right up to Port Nelson, to which we have secured access. The expedition which has been sent north to select the best route to Port Nelson has completed its work and obtained much information about the country generally. Of the possibilities of this district very little has hitherto been known. We have, however, just issued a report on the geological conditions, which suggest the presence of important mineral deposits. This report deals also with the nature of the soil and climate, which may ultimately prove of value for agricultural purposes in certain localities. Our information also points to the possibility of the timber becoming an important source of wealth, as well as to the presence of fish and game in great quantities, which will add to the attraction of the country. Thus, while we in Ontario are energetically developing the older parts of the province in all their manifold activities, as well as opening up the great Clay Belt, last year we broadened and extended the foundations for its future greatness for generations to come.

SIR JAMES WHITNEY.

J. P. Whitney

MANITOBA

By Sir Rodmond Roblin, Premier

SIR RODMOND ROBLIN.

THE year 1912 has been eventful for Manitoba. She will celebrate the new year with a pride begotten of provincial equality Her extended boundaries coupled with her increased financial strength, widens her horizon and multiplies both her opportunity and power for expansion and development. The increase of population, both rural and urban, is all that we can satisfactorily absorb. The volume of our trade shows phenomenal, yet healthy growth. Our bank clearances show Winnipeg to be second city in Canada. Agriculture was never so flourishing. Industrial enterprise is manifest on every hand. The appreciation of real estate is sound and healthy. New financial concerns, strong and well officered, are being organized to meet the ever-increasing demand. Over $25,000,000 of new buildings were erected last year in Winnipeg and suburbs.

We are naturally proud of all this, but, after all, the basic principle of our prosperity is agriculture. Winnipeg is the largest grain market in the world. A few years ago it was Chicago; a little later, it moved north 400 miles to Minneapolis. Two years ago, it again moved north 460 miles, to Winnipeg. It may make one more move of 450 miles to Hudson Bay, but Manitoba will still have the honor, as the ports are in our province. This probability reminds us that we are now a great maritime province, with untold possibilities along new lines of development. The conviction that Manitoba is destined to be one of the greatest provinces of the Dominion is emphasized by the fact that the Government of Canada is building a railway to Hudson Bay, every mile of which, including ports, are in her boundaries. This road will open new fields for Canadian energy and enterprise, as that north country abounds in iron, coal, gypsum, salt, petroleum, marble, mica, and even the precious metals themselves in less degree, while timber, fish and arable land are found in great quantities. To summarize, let me say our population is increasing, our trade expanding, our agricultural resources have developed, our transportation lines extended, our financial institutions multiplied, our status as province never so strong. In a word, the sun of prosperity shines on both sides of the street in Manitoba.

R. P. Roblin

SASKATCHEWAN

HON. WALTER SCOTT.

WHILE *The Monetary Times* has not received a message this year from the Hon. Walter Scott, premier of Saskatchewan, we are able to repeat here the inspiring words he gave our readers in the previous annual number, viz., that "Saskatchewan's growth is not being made at the expense of any other section of Canada, because the converse is the truth. Had Saskatchewan grown at slower rate, not alone would Canada have shown less growth, but eastern provinces would lack the growth caused by the enlarging business done by them with Saskatchewan. Having passed the initial and most difficult stages, we may reasonably count upon an accelerated future progress. Our reputation as the potential bread basket of the Empire is well established."

Walter Scott

ALBERTA

By Hon. Arthur L. Sifton, Premier

HON. A. L. SIFTON.

ALBERTA has closed a notably prosperous year. Over 600 miles of railway steel have been laid in the province within the past year, opening up new territory. The frontier has been pushed back beyond the rich prairie lands and mineral fields ot Peace River and Athabasca. The beginnings of industrial activity, so apparent in 1911, have materialized in a steady succession of establishments. The widespread country districts have yielded the greatest harvest on record.

It is, perhaps, a natural consequence that the inflow of population and capital to the cities has been unusually rapid and building activities proportionately extensive. The country has taken on a greater air of solidity, but loses none of its characteristic vigor in doing so.

Which augurs well for the future of Canada's sunniest province.

Arthur L Sifton

BRITISH COLUMBIA

By Sir Richard McBride, Premier

SIR RICHARD McBRIDE.

THE progress of British Columbia during 1912 has more than fulfilled the anticipations of twelve months ago; and for the coming year the record will be even greater, judged by all the indications from a business point of view. Ever-growing attention is attracted to this province from both this continent and from the old country, with the resulting increase in the flow of capital and influx of settlers. One great factor in the movement of progress is the enormous impetus in railway building, which will not only serve to develop the province, but will, by the time the Panama Canal is completed, give outlet for further transcontinental trade from the middle west of the Dominion to Pacific Coast ports.

By the last census, the population of the province showed an increase of 113 per cent. in the decade, and this growth is being greatly augmented, and will show a marked increase in the next year. Trade is exceedingly active, industrial prosperity is expanding rapidly, mining returns have a gratifying increase for the year, and the industry is in a healthy condition, while the development of lumbering, agriculture, the fisheries and the great natural wealth of the province generally augur well for 1913.

CANADA

By Hon. R. L. Borden, Premier

HON. R. L. BORDEN.

WE speak of the east and the west. In sentiment and in ideals there should be no Nova Scotia and no British Columbia, no Ontario and no Quebec, but instead, one Canada for all Canadians. The duty resting upon Canadians is seriously to proceed with the national work of developing the country's resources, the aim to manufacture for the people every article which is for the use and comfort of the Canadian people.

The people of Canada are not afraid to accept their just responsibility in the great task of the upbuilding of this great country; not to be considered an adjunct, but a greater part of a greater home. This country is prepared to take its just share of responsibility, but it must have some voice in determining the issue of peace.

The Canadian national spirit, which has been developed in the forty-five years of Confederation, is second to none in the British Empire, and certainly is not excelled by that of any other nation in the world. The old motherland, too, retains her virility, and is capable of taking as large a place in the world's affairs as ever in the past, and, in realizing that, the thought is emphasized that, however great our heritage may be, the heritage of the Empire is infinitely greater.—Mr. Borden in a Toronto speech.

RLBorden

WHO'S WHO IN THE ANNUAL NUMBER OF *THE MONETARY TIMES*

Some Brief Notes Regarding the Authors of Special Contributions to this Issue

Allum, T. C., Montreal.—Montreal representative of *The Monetary Times*; contributor to leading financial journals of Canada, Great Britain and United States.

Arita, H., Ottawa.—Vice-Consul in Canada for Japan; enthusiastic in the promotion of trade and other relations between Canada and Japan.

Barrett, Hon. John, Washington.—Director-General of the Pan American Union; a Panama Canal enthusiast; formerly United States Minister to Argentina, Panama and Colombia. The Pan American Union is an international organization and office maintained by the twenty-one American Republics, controlled by a Governing Board composed of the Secretary of State of the United States and the diplomatic representatives in Washington of the other American nations, administered by a Director-General and Assistant Director, and devoted to the development of commerce, friendship and peace among the American Republics.

Bennett, R. B., Vancouver.—Well-known newspaper man. Pacific Coast representative of *The Monetary Times*.

Blue, Dr. Archibald, Ottawa.—Chief officer of the Census Statistics Office of Canada; author of " The Growth of Canada in the Twentieth Century "; organized Bureau of Mines of Ontario, and was at its head for nine years; also organized Ontario Bureau of Industries; was formerly Deputy Minister of Agriculture, Ontario.

Boyle, A. E., Winnipeg.—Newspaper man; contributor to leading journals; expert on Western development.

Bradshaw, T., Toronto.—Partner of A. E. Ames and Company; formerly managing director Imperial Life Assurance Company; a clear and concise writer; has contributed many interesting life insurance articles to *The Monetary Times*.

Buchan, Ewing, Vancouver.—Manager of the Bank of Hamilton, Vancouver; well informed on British Columbia's general conditions.

Burgess, C. H., Toronto.—Of C. H. Burgess and Company, bond house; has contributed interesting bond price comparisons to several annual numbers of *The Monetary Times*.

Cantley, Thomas, New Glasgow, N.S.—General manager Nova Scotia Steel and Coal Company, whose service he entered in 1885; since 1909 vice-president of the company; councillor, Canadian Mining Institute; vice-president, Nova Scotia Mining Society.

Clews, Henry, New York.—Head of well-known investment firm, Henry Clews and Company; author of "Fifty Years in Wall Street" and other publications.

Coats, R. H., F.S.S., Ottawa.—Editor of Labor Gazette, Department of Labor, Ottawa; author of "Wholesale Prices" and other volumes on commodity prices; formerly a newspaper man; is a careful statistician, and can analyse results interestingly.

Coggswell, John, Calgary.—Associated with the Canadian Pacific Irrigation Colonization Company, Limited, Calgary; a Western enthusiast.

Colmer, J. G., C.M.G., London.—Partner of banking firm Coates, Son and Company; has written and lectured considerably on Canada; a councillor of Royal Colonial Institute.

Cramer, D. von, Vancouver.—Managing director, Vancouver Trust Company; enthusiastic in British Columbia's present and future; strong advocate of closer relations between Eastern and Western Canada.

Drummond, George E., Montreal.—Consul-General in Canada for Denmark; manufacturer and capitalist; authority on steel interests; director, Canada Cement Company, Canada Car Company, Liverpool, London and Globe Insurance Company, Montreal Trust and Deposit Company, the Molsons Bank, etc.

Dunning, Charles E., Regina.—Manager and secretary-treasurer of the Saskatchewan Co-operative Elevator Company, Limited. A keen business man, and largely responsible for the success attending his company's operations. Well posted on the Western farmers' needs.

Eckardt, H. M. P., Saranac Lake, N.Y., and Ridgeville, Ontario.—Formerly in Canadian banking service; prolific writer on banking and finance in leading journals of Canada, Great Britain and United States; frequent contributor to *The Monetary Times*; author of "Manual of Canadian Banking Practice" (published by *The Monetary Times*) and of "A Rational Banking System."

Englehart, J. L., Petrolea, Ontario.—Chairman of the Temiskaming and Northern Ontario Railway Commission; head of firm J. L. Englehart and Company; vice-president, Imperial Oil Company, Crown Savings and Loan Association, and London and Western Trust Company.

Evans, H. P., Toronto.—President, Union Life Assurance Company, formed by him in 1902; has been in life insurance business since 1892; director of several public companies.

File, L. K., B.A., F.I.A., F.A.S., Toronto.—Prominent Canadian actuary; associated with Canada Life Assurance Company for many years; has frequently addressed Insurance Institute of Toronto; periodical contributor to *The Monetary Times*.

Galarce, Carlos A., Ottawa.—Consul-General in Canada of the Argentine Republic.

Galbraith, T., Toronto.—Commercial editor, Toronto Mail and Empire; a concise and attractive writer on financial and commercial subjects.

Gault, John, Blair, Ontario.—For many years a Canadian banker; a reader of *The Monetary Times* since 1871.

Gibson, John J., Toronto.—General manager, Title and Trust Insurance Company; formerly engaged in legal practice.

Gilissen, P. M. T., Rotterdam, Holland.—Member of firms Arnold Gilissen, Rotterdam, and Gilissen and Company, Amsterdam.

Gourlay, R. S., Toronto.—President, Canadian Manufacturers' Association; past president, Toronto Board of Trade; member, Toronto Harbor Commission, member of manufacturing firm, Gourlay, Winter and Leeming.

Hannenheim, H. Hann von, Montreal.—Consul-General in Canada for Austria-Hungary.

Harris, N. W., Boston.—Of Messrs. N. W. Harris and Company;. well-known financial authority in the United States; has studied Canadian finance and has big interests in this country.

Haultain, H. E. T., Toronto.—A mining engineer of wide experience and a leader of his profession in Canada; Professor of Mining, University of Toronto; member of firm, Guess and Haultain.

Hearst, Hon. H. W., Toronto.—Minister of Lands, Mines and Forests, Ontario.

Hedley, James, Toronto.—Formerly editor of *The Monetary Times*, which position he held for thirty years until his retirement; one of the most interesting, best known and well-liked writers.

Hedley, R. R., Vancouver.—One of the foremost mining engineers in Canada, and especially well-informed on British Columbia's mineral resources.

Hepburn, A. Barton, New York.—Chairman of the board, Chase National Bank; one of the foremost bankers of the American continent.

Hind, Miss Ella Cora, Winnipeg.—Commercial editor, Manitoba Free Press since 1906; appointed secretary Manitoba Dairy Association, 1907; author of "Red River Jottings," and contributor to various periodicals on agricultural and commercial subjects. Was first Western Canada correspondent of *The Monetary Times*.

Hosmer, C. R., Montreal.—Capitalist; gained big experience partly with Grand Trunk Telegraph Company; manager, Canadian Pacific Railway telegraph system, 1886, from which he retired 1899; is now president, vice-president, and director of a large number of financial and business institutions.

James, F. J., Regina.—Member of firm, Nay and James, one of the leading bond houses in Western Canada.

King, T. W., Toronto.—A well-known, popular and versatile newspaper man. Has attended the sessions at Ottawa for many years.

Laidlaw, J. B., Toronto.—Canadian manager, Norwich Union Fire Insurance Society, Limited; prominent and active citizen of Toronto; one of the best posted fire underwriters in Canada.

Laing, G. S., C.A., Winnipeg.—Member of firm, Montague, Aldous and Laing, Winnipeg. Has unshaken faith in the future of Western Canada, and Winnipeg particularly.

Lawson, W. R., London.—One of the foremost financial writers of Great Britain, and known equally well on both sides of the Atlantic; author of "Canada and the Empire" and many other volumes; member, London Stock Exchange.

Lindback, A., Winnipeg.—Fire Commissioner for Manitoba; "the only fire marshal in Canada"; president, Fire Marshals' Association of North America.

Lye, Henry, Vancouver.—Well-known fire insurance adjuster; frequent contributor to *The Monetary Times.*

Macaulay, T. B., Montreal.—Managing director of the Sun Life Assurance Company; ex-president of the Actuarial Society of America.

Macneill, W. Cavendish, Toronto.—Member of firm, G. A. Stimson and Company, bond house.

McCaffey, E., Victoria.—Secretary, Vancouver Island Development League.

McGrath, Hon. P. T., M.L.C., St. John's, Newfoundland. —Well-known newspaper man and interesting writer; appointed to a seat in the Legislative Council of the colony, January, 1912; journalistic mouthpiece of the Morris Government, and has a large say in the shaping of its policy.

McMaster, J. K., Toronto.—Manager editorial and purchasing department, Canada Life Assurance Company; is unusually well informed on life insurance topics, and an interesting contributor to the insurance press.

Meikle, W. B., Toronto.—General manager, Western Assurance Company; a leading underwriter.

Miller, Andrew, Calgary.—Industrial commissioner, city of Calgary; an expert on Western industrial conditions; has helped considerably Calgary's commercial progress.

Morrisey, T. L., Montreal.—Resident manager in Canada for the Union Assurance Society of London, England; member of Montreal Board of Trade; president, Montreal Insurance Institute, 1904; an expert insurance man, and an interesting and forceful writer.

Mousir, E. P., Montreal.—Secretary, Canadian and West Indian League. Mr. Mousir will answer inquiries of readers of *The Monetary Times* as to trade and investment prospects of the British West Indies, and will furnish information of the steamship arrangements he has made to take Canadians to the West Indies this winter.

Myers, K., New Westminster.—Secretary, New Westminster Progressive Association.

Noxon, W. A., Toronto.—Member of bond house, Brent, Noxon and Company.

Orr, W. H., Toronto.—Associated with the Aetna Life Insurance Company, as manager and attorney, for nearly half a century; formerly publisher and editor; imported from Albany, N.Y., 1872, the first typewriter ever used in Canada.

Osler, Sir Edmund, M.P., Toronto.—One of Canada's leading financiers and legislators; a pioneer of railway development in Ontario; president, Dominion Bank, and director of a large number of important commercial and financial institutions.

Paterson, T. F., Vancouver.—President and manager, Paterson Timber Company, Limited; one of the best informed men respecting British Columbia's timber resources.

Patton, M. J., Ottawa.—Assistant secretary, Commission of Conservation of Canada, an enthusiast in his work.

Payne, J. L., Ottawa.—Comptroller of Statistics, Department of Railways and Canals, Ottawa. One of the few men who make Government blue books interesting.

Pellatt, Colonel Sir H. M., C.V.O., Toronto.—Capitalist, investment broker; one of the foremost financiers of Canada; associated in various capacities with a large number of enterprises.

Pontifex, Bryan, Toronto.—Partner in firm, Vigeon and Company, Toronto; member, Institute Chartered Accountants of England and Wales and of Ontario; member of Ontario Council; Fellow, Royal Statistical Society.

Rand, C. D., Vancouver.—Financier and stock broker; was first president of Vancouver Stock Exchange; has intimate knowledge of British Columbia conditions.

Rawlings, H. E., Montreal.—Managing director, Guarantee Company of North America; director, Montreal Telegraph Company; was for some years vice-president, United States Guarantee Company, New York.

Riley, R. T., Winnipeg.—One of the principal business men in Winnipeg; president, Winnipeg Board of Trade, 1895; one of managers Winnipeg Stock Exchange; one of organizers and director Great-West Life Assurance Company; director Canada Permanent Mortgage Corporation, Manitoba North-west Land Company and Union Bank of Canada.

Robins, Kingman Nott, Rochester, N.Y.—Treasurer, Associated Mortgage Investors, Rochester. Good type of business man and thoroughly appreciative of investment opportunities in Alberta.

Ross, Sir George W., Toronto.—Formerly Premier of Ontario; close student and writer of financial and economic subjects; president, Manufacturers' Life Insurance Company; director, Union Trust Company.

Saunders, E. A., Halifax.—Secretary, Halifax Board of Trade; Imperial Trade Correspondent at Halifax.

Shallcross, J. J., Victoria.—Prominent in commercial and business circles in British Columbia; President, Victoria Board of Trade; Imperial Trade Correspondent at Victoria; strong advocate of government assistance to a shipbuilding industry for Canada.

Shaughnessy, Sir Thomas, Montreal.—President, Canadian Pacific Railway; entered railway service in purchasing department, Milwaukee and St. Paul Railway, 1869; director of many Canadian companies; a keen financier and one of the best railroad executives.

Skelton, O. D., Kingston.—Professor of Political Economy, Queen's University, Kingston, Ontario; a forceful and interesting writer.

Taylor, F. Williams, London.—Manager of Bank of Montreal in London; winner of Society of Arts gold medal for paper on Canadian banking system; delivered most important address of past year on Canadian borrowings, to Royal Colonial Institute.

Terrero, Leopoldo, Ottawa.—Consul General in Canada for the State of Venezuela; formerly Consul at New York, Cueuta (Colombia), and Grenada; and Judge of Instruction at Caracas.

Vallette, Marc de, Paris.—Barrister; contributor to various financial papers of America.

Wachter, F. M., Rotterdam, Holland.—One of the managers of the Rotterdam Canada Hypotheekbank; a visitor to Canada last year.

Walker, Sir Edmund, Toronto.—One of the leading bankers of the American continent; president of the Canadian Bank of Commerce; chairman, Board of Governors, Toronto University; director of Toronto General Trusts Corporation; author of "Canadian System of Banking and the National Banking System of the United States," and other publications. Associated with many public organizations and interested in a large number of public matters.

Weir, George, Toronto.—Manager, guarantee department, London, Guarantee and Accident Company, Limited.

Westerman, W., Rotterdam, Holland.—President of Rotterdamsche Bankvereeniging (Bank of Rotterdam); a visitor to Canada and the United States last year.

Whyte, Sir William, Winnipeg.—Director of Canadian Pacific Railway Company; retired as 2nd vice-president of company in 1911; director, Imperial Bank, Confederation Life Association, Imperial Guarantee and Accident Insurance Company, and British Columbia Southern Railway, and other companies; vice-president, Winnipeg Street Railway and Standard Trust Company. One of the best known, popular and capable men, especially in Western Canada.

Willans, E., Toronto.—General manager, Imperial Guarantee and Accident Insurance Company of Canada; an expert underwriter.

Wilson, F. Page, Toronto.—Editor of the Canadian Miller.

Woodland, C. W. I., Toronto.—Joint manager and attorney for Canada and Newfoundland Employers' Liability Assurance Corporation, Limited; a well-known underwriter.

Yelgh, Frank, Toronto.—Registrar, Department of Crown Lands, Ontario; author of "Five Thousand Facts About Canada," and other publications and volumes; frequent contributor to Canadian and English reviews and periodicals; popular lecturer.

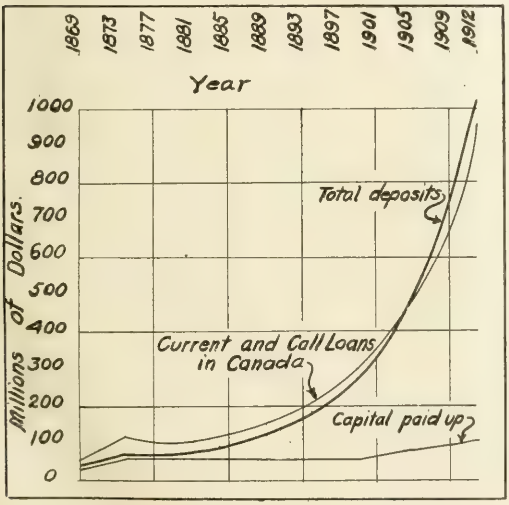
FORTY-THREE YEARS OF CANADIAN BANKING

Paid-up Capital in That Time Has Increased 311 Per Cent. and Current Loans 1,543 Per Cent.—In 1889, Canada Had 41 Banks; By Last Year the Number Had Been Reduced to 25

While much has been written regarding the excellence and suitability of Canada's Bank Act little has been heard of the actual development of Canadian banking, more especially from a statistical viewpoint. Upon the stability of a country's banking system, its adaptability to changing conditions, its interdependence upon the commercial and monetary situations without, depends largely the substantial character and the extent of national development. This is more especially the case with new countries, such as Canada. The continual inflow of capital makes doubly important the strength of the domestic banking position. It was recently shown that at least $250,000,000 of United States capital have been invested in industrial spheres of the Dominion. Last year, Canadian public flotations in London brought to this country nearly $200,000,000. Mr. George Paish, the English statistician, estimates that during recent years one billion dollars of English capital have been sent to the Dominion. During a recent twelve months' period, Canada claimed a large share of British investments abroad, two and a half millions sterling in excess of that absorbed by the Argentine Republic and twice as much as was obtained by the United States. The figures are:—

Canada	£27,425,401
Argentine	24,803,545
United States	13,634,655

Mr. E. R. Wood, of Toronto, states that of the total Canadian bond issues in 1911, $266,812,988, the British market took $204,264,143, or over 76.56 per cent. Banking relations as between Great Britain, certain European countries, Canada and the United States, have gradually become closely intimate. This accounts largely for the international interest evidenced in the publication of the Canadian chartered banks' statements month by month. The bankers of Canada have recognized their responsible position and have assisted the development of this country in a progressive yet wisely conservative manner. That they recognize the Dominion is on the eve of a fresh spurt of national expansion, financial, commercial and agricultural, is proved if only by the fact that one bank after another is obtaining power to increase its capital. With the past few weeks four of our chartered banks have notified their intention to enlarge their capital by the aggregate amount of $12,000,000.



Expansion of Banking Capital.

An analysis of the Canadian banking figures during the past half century reveals a wonderful expansion which, seems to have kept pace fully with the trend of general conditions. From 1817 to 1867, joint stock banks under provincial charters were attending to the country's finance. The history of that period is traced in an interesting manner in Sir Edmund Walker's volume on banking in Canada. Here it is proposed to show in actual figures the enormous, though perhaps natural expansion of the Dominion's banking business. Capital perhaps attracts first attention. The following table will show at a glance how it has risen with the tide of progress:—

Dec.	Capital Authorized.	Capital Paid up.	Number of Banks (head offices).	Av. Paid up Capital per Bank.
1869	$ 38,166,000	$27,663,367	27	$1,024,569
1874	76,566,666	63,212,035	40	1,580,300
1879	67,266,666	60,351,505	40	1,508,787
1884	71,896,666	61,605,520	40	1,540,138
1889	75,779,999	60,189,356	41	1,468,033
1894	73,458,685	61,669,355	38	1,622,877

*1912	193,866,666	111,134,182	26	4,274,391

About 1850 the Dominion felt the pinch of the lack of capital and this shortcoming it was endeavored with no success to mitigate by what was known as the Free Banking Act. The demand for increased capital had not been appeased and permission was later granted to six existing banks to increase their capital to the extent of about $10,000,000. Generally speaking the capital needs of the country since then have been well satisfied. During times of trade depression, complaint as to insufficient banking capital is sometimes raised. This is often nothing more than the cry of those whose credit in times of national stress, has properly been curtailed.

Average Capital Per Bank.

From the above figures it will be observed that the authorized capital of 27 chartered banks in 1869 has increased during the past forty-three years by 155 million dollars or 408 per cent., one bank less being included in last year's figures. In the same period, the paid up capital has expanded by 84 million dollars or 311 per cent., while the average paid up capital per bank has grown from one to four millions. In the five years between 1869 and 1874, the authorized capital doubled and the paid up trebled within eight million dollars. Between 1879 and 1899 the capital exhibited curious fluctuations, with the result that in the latter year authorized showed a decline from that of 1879, while the paid up exhibited a small increase. In the past thirteen years, the authorized capital has more than doubled—from 76 to 193 millions, a gain of 154 per cent.—while the paid up figures changed from 63 to 111 millions, an increase of 76 per cent. When the num-

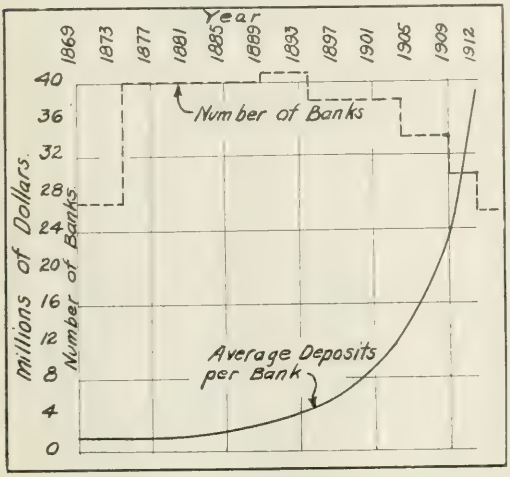
*October.

ber of individual banks was highest, their capitalization showed little appreciation. The concentration of banking power, as shown by the reduction of the number of banks from 41 in 1889 to 26 in 1912, has apparently at the same time helped capital expansion.

There are plain signs that the capital strength of the Canadian banks will be materially increased during the next few years. With others, the bankers foresee a period of activity in all business spheres and the present amount of banking capital must be raised to cope with the coming situation.

An important relation naturally exists between banking capital and credit. The table shown on the preceding page shows the amount of current and call loans, the total deposits, the paid up capital and percentage relations every five years since 1869.

Current and call loans in the Dominion during the forty-three years' period have increased from 58 to 953 millions, a gain of 1,543 per cent. compared with an increase in paid-up capital of 311 per cent. These statistics exhibit favorable results and indicate good and profitable banking practice. In the forty-three years' period, the total deposits rose from 44 to 1,023 millions, or 2,315 per cent. Between 1869 and 1874, the aggregate current and call loans at home increased 81 millions, an average of 16 millions a year and a gain in the five-years' period of 139 per cent. Paid-up capital in the same five years expanded by 36 millions or 133 per cent., and deposits by 25 millions or 56 per cent.



Rates of Loans to Capital.

In 1869 the percentage ratio of loans to paid-up capital was 214, which had increased five years later to 220, while the percentage of loans to deposits rose from 107 to 201. In other words, in the former year for every $100 capital, $214 were loaned, and for every $100 of deposits $107 were loaned. An extraordinary change is noticed when these figures are compared with those of the past year. In 1912, for every $100 of paid-up capital $857 were loaned in Canada. Deposits having grown enormously, the change in that item is by no means as striking, as for every $100 of deposits, $93 were loaned.

Between 1874 and 1879 the figures show a marked decline, which is probably explained by the period of depression prevailing about that time. For the past thirty years there has been a notable growth in the percentage of loans to paid-up capital, the figures in 1879 being 161, and in 1912, 857. The ratio of loans to deposits has varied, and exhibits several decreases in the same period, and last year was the lowest on record. In the past thirteen years, current and call loans have more than trebled, and total deposits have almost quadrupled.

As current loans represent more particularly credit advanced for actual industrial and other development, the following figures give an idea of the expansion in this item alone:

July.	
1869	$ 54,175,679
1879	98,773,675
1889	148,768,283
1899	247,747,500
1909	539,821,041
1912	852,256,651

During the past thirteen years the increase in current loans has been 243 per cent., and in the past forty-three years 1,477 per cent. Complaints as to lack of accommodation afforded to the business public by the banks have been heard from time to time. Within recent years, criticism was perhaps most strenuous immediately after the severe panic in the United States in 1907. A notable object lesson was enacted in the neighboring Republic and the bankers of Canada profited by their colleagues' experience. Credit in Canada was sharply curtailed. The check to expansion came so suddenly, many thought that Canadian bankers had acted too severely. An extremely cautious loaning policy was observed and the very best security became necessary to obtain credit extension. The idea that our financial institutions had erred in their judgment prevailed for several months. Later it was realized that an area of depression had set in, and only now perhaps it is being fully recognized that the Canadian banking policy of two years ago is largely responsible for the remarkable rapidity with which normal prosperity has returned. This economic revolution, which usually takes double the time it has occupied in the present instance, has been duly noted by the bankers, who will undoubtedly check any possible wild gallop into loose and perhaps superficial prosperity which can only end in disastrous commercial depression.

Our banks have had large sums to loan, especially within recent years, while the deposits have been expanding greatly. In 1909, the low money rates prevailing made it difficult to place these amounts at remunerative figures. The result was that only a few of the chartered banks were able to report in 1909 an increase over the previous year in profits. The banking returns for the past twelve months show better results.

Excessive Rates in New York Exceptional.

Mr. Alexander Laird, general manager of the Canadian ank of Commerce, has stated that the action of any Canadian bank in curtailing its commercial loans in Canada in order to take advantage of the high rates occasionally prevailing in New York would be absurdly improbable. Only now and again, he added, during the past few years have excessive rates for call money in New York prevailed for more than a few days in the year, and no sane banker would think of sacrificing permanent business connections in Canada, of even the smallest kind, for such a temporary advantage. Self-interest will at all times be a sufficiently weighty force tc prevent the banks from lending Canadian funds outside of Canada except to the extent that is necessary for the purposes of their cash reserves.

In November, 1907, when the foreign loans of Canadian banks were at their low point—$64,774,000—the Canadian banks held deposits elsewhere than in Canada amounting to $54,819,000, so that not more than $10,000,000 of Canadian funds were being lent outside Canada. Moreover, the larger portion of these loans are carried in New York at twenty-four hours' call—practically as readily available as cash. Except at rare intervals, New York call loans bear a much lower rate of interest than Canadian mercantile loans; consequently, the banks only aim to only carry such an amount at call in New York as with the cash carried here, will constitute a reasonable reserve of cash and immediately realizable funds. Had the banks at the date mentioned had no deposits and no loans outside of Canada, only $10,000,000 would have been added to their resources at home, and this would not have been lent for commercial purposes. On the contrary, in order to bring the total reserves up to the normal level not only would it have been necessary to add this sum to the cash reserves carried in Canada, but also to withdraw a further large sum from mercantile loans.

Money Was Actually on Call.

Notwithstanding the severity of the United States panic, Mr. Laird has stated that there was not a day during which Canadian moneys lent to New York brokers on call could not have been got in, and while it is true that if it had been desired to ship money to Canada direct from New York a premium of 3 to 5 per cent. would have fallen to be paid on the other hand New York funds could at any time have been exchanged for drafts on London, and the gold brought from there. This procedure was followed to a considerable extent by the New York agencies of some Canadian banks.

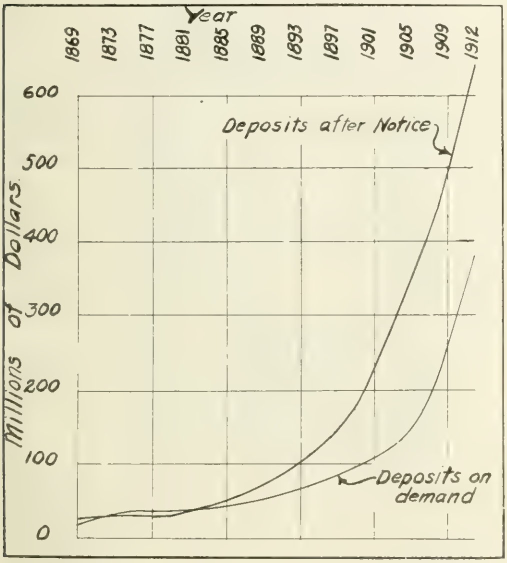
On the general subject of the moneys lent in the United States, it may properly be argued that reserves are for use in a time of emergency, but on this score it can be shown that the course of the Canadian banks last autumn was not at all open to criticism. In the month of September, 1907, the total loans of Canadian banks outside Canada amounted to $88,953,000, while at the end of November, when the stringency was most severe, they had been reduced to $64,774,000—from which it will be seen that the banks had drawn upon their outside reserves to the large amount of $24,000,000 to meet the necessities of the mercantile community in Canada.

In the matter of deposits, large gains are noted, more particularly within the past thirteen years. The following table gives details:—

December		Deposits on Demand.	Deposits after Notice.	Total Deposits.
1869	....	$ 17,377,019	$ 27,185,439	$ 44,562,458
1874	....	35,624,746	33,483,718	69,108,464
1879	....	37,889,159	30,600,254	68,489,413
1884	....	42,904,831	49,405,039	92,309,870
1889	....	53,996,900	70,477,618	124,474,518
1894	....	69,364,659	113,842,322	183,206,981
1899	....	99,463,898	173,769,968	273,233,866
1904	....	134,280,104	319,132,078	453,412,182
1909	....	261,268,387	499,082,024	760,350,411
*1912	....	383,814,572	640,097,928	1,023,912,500

*October.

During the forty-three years since 1869, deposits on demand have risen from 17 to 383 millions, an increase of 366 millions or 2,153 per cent.; deposits after notice have increased from 27 to 640 millions a gain of 613 millions or 2,270 per cent.; total deposits have risen from 44 to 1,023 millions, an expansion of 979 millions or 2,315 per cent. In the same period, the average deposits per bank have expanded from about $1,000,000 to $39,000,000. Every five years since 1884, the total deposits show an increasing percentage gain over the previous figure. Thus the expansion of deposits in 1884 as compared with 1879 is 34 per cent., rising to an increase of 67 per cent. in 1909 over the figures of 1904. The increase last year over 1909 was 34.7 per cent. Comparing these records with the number of banks it is seen that the average deposits per institution in 1884 when there were 40 chartered banks were $2,000,000. In 1889, with 41 banks $3,000,000; in 1909 with thirty banks, $25,000,000, and last year, with 26 banks, $39,000,000. With a decrease since 1889 of fifteen in the number of banks, the average deposits have increased by 26 million dollars or 866 per cent.



Average Deposits Per Capita.

The statement has been made more than once that in the matter of deposits per capita Canada is the richest country in the world. The figures cited in the editorial columns show deposits per capita of $104.

Note circulation has increased in similar proportion to other items. The following figures show the circulation for the past three decades:—

July.	
1879	$21,050,631
1889	30,343,413
1899	40,270,100
1909	71,006,005
1912	95,827,534

In the last thirteen years, circulation has increased 137 per cent., and in the past thirty years 352 per cent. No trouble has been experienced with circulation in recent years until the fall of 1907. A large amount of grain in Western Canada remained unmoved just prior to the close of navigation. In response to urgent appeals to the government by grain interests, a conference was held with the bankers, the final result being a special amendment to the Bank Act, authorizing any bank during the usual crop movement season, October 1st to January 31st, to issue circulating notes in excess of its paid-up capital and rest or reserve fund as shown by the statutory monthly returns made to the government for the previous month. The banks which take the chief interest in moving the Western crops have made good use of this legislation. Mr. Laird recently stated that the wisdom of the provision for additional circulation had been signally demonstrated by the ease with which the necessary circulating medium had been provided for the movement of the abundant harvest. He also said that unless arrangements were shortly made for additional circulation by increase of capital a situation might arise in which a struggle to reduce the amount outstanding at the end of January to within the limit of paid-up capital would become inevitable. If that became at all general, it would not likely be accomplished without considerable disturbance to business.

No. of Banks.	Average Deposits per Bank.		Per cent. increase or decrease. Total Deposits over previous year named.
27	$ 1,050,461	....	......
40	1,727,711	....	+ 55
40	1,712,235	....	- .8
40	2,307,747	....	+ 34.7
41	3,035,964	....	+ 34.8
38	4,821,236	....	+ 48
38	7,137,733	....	+ 49
34	13,335,652	....	+ 65.9
30	25,345,014	....	+ 67.6
26	39,381,250	....	+ 34.7

The standing of assets and liabilities during the past four decades is best seen in the following table:—

Dec.		Total Liabilities	Total Assets	Increase or decrease of Assets over previous year named	Increase of Liabilities over previous year named
1869	....	$ 56,758,792	$ 91,685,333	.	.

*October.

Concentration of Banking Strength.

The increase in forty-three years in total liabilities was 1,227 millions or 2,191 per cent. and in total assets 1,430 millions or 1,571 per cent. In the last thirteen years, the liabilities show a gain of 947 millions, or 281 per cent., and the assets 1,090 millions of 253 per cent.

One becomes interested to learn details of Canada's bank branch system, which has helped to produce these large figures in a growing country. The Dominion to-day has a smaller number of banks than at any time since 1869, as the following figures will show:—

July		Ont.	Que.	N.S.	N.B.	B.C.	P.E.I.	Man.	Sask.	Total
1869	...	5	13	5	4	..	..	..	..	27
1879	...	9	18	9	4	..	..	..	..	40
1889	...	13	14	9	3	1	..	1	..	41
1899	...	10	14	8	3	1	2	..	..	38
1909	...	13	11	2	2	.	..	1	..	29
*1912	...	10	10	1	1	1	.	2	1	26

*October.

The above figures represent head offices and include several banks which transacted business in only one province. These were gradually eliminated and the large banks opened new branches in the growing districts. The tendency in the past few years has been for the purely local and provincial institutions to disappear and for the general concentration of banking strength in comparatively few and substantial institutions. During the past decade, few new banks have come into existence, while several small and private ones have failed or have been absorbed. The absorption of the Bank of New Brunswick last year reduces the number to 25.

Another influence in this consolidation of banking power is the fact that the Dominion Government is exercising greater discretion than hitherto in granting new bank charters.

Increase in Number of Branch Banks.

While the number of individual banks has decreased and shows a loss to-day when compared with 1889 of sixteen institutions, including the Bank of New Brunswick, the number of bank branches has multiplied rapidly. In 1889 there were 663 branches. In November, 1912, these figures had increased to 2,790, besides 74 branches in the United States, England, Newfoundland, West Indies, France and elsewhere. Thus there has been a gain in this item during the past twenty-three years of 2,127 or 320 per cent. The increase has been largely confined to a recent period as the following table shows:—

Year.	Number of Bank Branches.	Increase of Banks over previous year named.
1889	663	..
1900	708	45
1901	750	42
1902	904	154
1903	1,049	145
1904	1,145	96
1905	1,454	309
1906	1,745	291
1907	1,886	141
1908	1,927	41
1909	2,164	137
*1912	2,790	626

*November.

The distribution in November, 1912, of the Canadian branches is seen in the following table:—

Newfoundland	13
Elsewhere	61
Ontario	1,075
Quebec	467
Nova Scotia	110
New Brunswick	75
Prince Edward Island	14
Manitoba	196
Alberta	254
Saskatchewan	372
British Columbia	224
Yukon	3
	2,864

As would be expected, in late years the Western Provinces have claimed most of the new branches, although a large number of additional agencies have also been established in Ontario. The population of Canada has increased from about three millions in 1869 to more than seven millions to-day. The above banking statistics are reliable indications of sturdy growth and make a conservative appeal for a continuance and increase of capital investment in the Dominion.

◆

NEW BANK LEGISLATION

An external audit of bank books, the deposit of gold in a central gold reserve, and the issue of notes by banks against it, the loaning of money to farmers by the banks upon the security of threshed grain in their possession and to ranchers upon cattle, are three of the chief provisions of the revised Bank Act, proposed by the Minister of Finance. The new system will authorize the Minister to call for an examination of the affairs of a bank by the auditors appointed at the annual general meeting of shareholders. At present the Minister receives monthly statements from the banks, but there is no machinery by which he can verify the information given by the bank officials. Therefore, it was thought well that the shareholders should be required to appoint an auditor and that the Government should vote compensation to that official in return for his services in verifying the returns made by the banks and in providing information sought by the Finance Minister. This plan is followed in England. The auditor will occupy an independent position, will be capable of reporting upon the condition of the bank, will have to check accounts and will be able to report cases of fraud.

◆

The lumber business, on the Atlantic as on the Pacific side, shows much improvement, apart from the pulp and paper industry, which is specially adapted to this country, and has been very prosperous for some time past, but owing to the number of new concerns in operation, there is a tendency of over-production, with slackening demand and lower prices. -Mr R B Angus, Montreal

PROSPECTIVE RISE IN BANK DIVIDENDS

Records for Nine Years—If Existing Prosperity Continues in the Dominion, Returns May be Twenty Per Cent.

BY H. M. P. ECKARDT.

One of the attractions held out to prospective investors in Canadian bank stocks is the probability that the yield will steadily increase. Taking all Canadian chartered banks in active business the amount of dividends actually paid represented 7.88 per cent. on their average paid capital in 1903. Every years since then has seen an increase in the average rate. The rise has proceeded in spite of the panic and the depression that followed it. Thus in 1904 the dividends paid amounted to 8.01 per cent. of average capital; two years later, in 1906, the rate was 8.20; in 1907 it was 8.56; in 1908, 8.74; in 1909, 8.88; in 1910, 9.18; and in 1911, 9.82. In case of all the banks, taken as a unit, the rate of distribution has risen roundly 2 per cent. in the eight years, or an average of 1 per cent. in four years. However, a closer examination of the figures reveals the fact that the second increase of 1 per cent. was effected in the course of two years, while the first required six years for its accomplishment.

The slower rise in the period 1903 to 1909 is accounted for in part by the disturbing influences of the United States panic. While the financial upheaval was in evidence the Canadian bankers would be disposed to move cautiously in the matter of raising dividend rates. And, of course, when quiet was restored the trade recession and falling off in demand for bank credits caused the profits of the banks in both countries to show some diminution.

Another reason for the slower rise existed in the earlier period. At the end of 1903 the paid-up capital of the banks amounted to $78,563,236, and the total of the rests was $50,598,511. In other words the rests, taken as a whole, were but 64½ per cent. of the capital. At the end of July, 1912, the paid capital of the going banks amounted to $110,410,732, and the rests amounted to $101,735,482—the latter having risen to 91 per cent. of the former.

Accumulating Rest Equal to Capital.

At the earlier date most of the banks were aiming intently at the accumulation of a rest equal to the capital. Only a half-dozen institutions had reached that goal, viz., the New Brunswick, Nova Scotia, Toronto, Royal, Dominion, Metropolitan. In the July, 1912, list, in addition to the six banks mentioned, the Montreal, Molsons, Hamilton, Standard, Ottawa and Imperial, appear with rests equal to or greater than their capital. This change of position has had a considerable effect on the dividend policy of the banks. Their profits have not been quite so extensively applied to build up the rests. Consequently dividend increases have been more numerous.

The rest, or reserve fund, is regarded as a protection or bulwark for the capital stock. When it reaches the level of the capital, the valuation of the assets being conservative, it serves to practically eliminate or nullify the double liability of the shareholders. But, in order to be an ample protection to the capital the rest must rise in proportion with the increase in the bank's loans and total risks. So it is the custom, in many cases, for the bankers to continue making additions to the rest, even when it has reached an equality with the paid-up capital. But the work of building up the rest may then proceed more leisurely; and perhaps it will be decided that the stockholders shall be given an increased proportion of the yearly profits.

Giving particular consideration to this matter of the growth of the rests, and to the fact that nearly half of the banks now have rests equal to or greater than the capital, one would naturally conclude that in the future the average dividend rate is likely to rise more rapidly than in the past. Given a continuation of fairly satisfactory conditions throughout the country, it does not seem at all extravagant or unreasonable to expect that every second year will witness a rise of 1 per cent. in the average rate of dividends paid. If the present prosperity should endure for several years, bank stockholders might be so fortunate as to have the average dividend rise 1 per cent. in 1½ years, or even in 1¼ years.

While the pressure to apply current earnings towards the building of rest funds is growing sensibly less, the current earnings are now required to provide an increasing amount for meeting expenditures on bank premises account. In 1911 the appropriations for bank premises amounted to $2,177,944, or over 2 per cent. on the average capital of the banks. There is no doubt that these expenditures on new buildings and appropriations for the same have had a sensible effect in keeping down the dividends. And it is quite likely that the expenditures and appropriations for this purpose in the next five or ten years will retard the rise of the dividend rate.

In this article the banks are taken as a unit, and some of the attractive features of bank stocks as a class are referred to. But if an investor is attracted to this class of investments he would require to be informed regarding the prospects of the various individual stocks. The management, past record, and peculiar circumstances of each bank: all have to be taken into account. Although the average of the dividends of all banks has risen steadily in the past eight years, the various banks have taken an unequal part in bringing to pass the annual rise in the average rate, and from the records it can be discovered which institutions have raised the rate of distribution most rapidly.

In the list of banks reporting to the government at the time of writing, are 20 institutions which were in active business in 1903. It is interesting to summarize their records as to dividends during the period. First of all there is one bank—the Metropolitan—which had just started at the earlier date and was paying no dividend. Now the Metropolitan pays 10 per cer cent. There are two banks—the Nova Scotia and the Royal—which have increased their rate by 4 per cent. Four banks have raised their dividends 3 per cent.; eight have made a 2 per cent. raise; and five have made a 1 per cent. raise.

However, not in every case would a purchase of bank stock in 1903 have had extraordinary good results. One of the stock broking houses recently stated that bank stocks in 1912 were selling below the level obtaining ten years ago notwithstanding dividends had been raised and the large amounts added to the rests. Upon comparing the prices prevailing at the end of the third quarter of 1912 with those ruling in 1903—nine years ago—it is seen that there has been on the whole no appreciation, if the comparison be made with the early part of 1903. About June in that year financial conditions were upset; and in the last half bank stocks, in common with other securities, suffered from depression.

H. M. P. ECKARDT.

Taking 17 of the twenty banks, for which quotations are available, and using in each case a quotation half-way between the high and low points for 1903, the average price works out about 193, whereas the average price of the stocks of the same 17 banks about the end of September, 1912, works out at 201. So, figuring upon that basis there has been a slight advance in the average price of bank stocks since 1903. The rise in the average has been brought about chiefly through appreciation in the prices of Commerce, Hochelaga, Merchants, Nationale, British, Union and Quebec—all of which were numbered among the comparatively low priced stocks nine years ago. As regards the other stocks (of banks which were then paying dividends of from 8 to 10 per cent.) it now appears that the quotations ruling in the early part of 1903 were too high.

Average Yield Was Below Last Year's.

The average yield in that year was well below the yield in 1912. Thus, taking the mean prices in 1903 (half way between high point and low point) the net yield on the investment, from purchase of bank stock would range from about 3.7% in the cases of the Montreal, Nova Scotia, and Royal, up to 5.2% in the cases of the Union and Hochelaga. Most of the stocks gave a net yield of from 4 to 4½. The increases in the dividend rates effected since 1903 have served to slightly increase the net yield upon investments made in 1903 or prior to that year and continued throughout the period. Leaving out of account the rights pertaining to new stock issues made during the nine year period, the purchasers of the stocks of any of the 17 banks referred to have seen the net yield upon their investment rise from ⅓ to about 2 per cent. Owing to the high prices ruling for their stocks in 1903 the 4 per cent. dividend increases made by the Nova Scotia and Royal have resulted in increasing the net yield of stockholders buying at 1903 prices by 1.6 per cent. in case of the Nova Scotia, and 1.9 per cent. in case of the Royal.

An investment made nine years ago and held continuously would now yield from 4.2 per cent. in case of the Bank of Montreal up to 7.3 per cent. in case of the Nationale. Most of the stocks would yield from 5½ to 6 per cent. However, there is the matter of new stock issues to be considered. All but one or two of these banks have issued new stock to old holders at prices below the market. Some of the banks have made frequent issues; and the effect of such issues has been to reduce the average capital cost of the shares, or if the rights were sold and the proceeds treated as income to increase the net yield. Thus these capital increases have served to increase to some extent the rate of return on the investment.

Six Banks Which Have Since Failed.

There is another consideration entering into the matter of the net return which an investor would now be receiving on a purchase of Canadian bank stocks in 1903. There were then in the list of active banks six institutions which have since failed—the St. Stephen, Yarmouth, St. Jean, St. Hyacinth, Ontario, Sovereign. And, of course, if he had selected the stock of one of those banks he would probably have seen his capital vanish. Unless he had happened to live in St. Stephen, St. Jean, St. Hyacinth, or Yarmouth, he would not be likely to select the stocks of those small local banks for his investment. So the chances of loss in them may be ignored. But it is just possible that either the Sovereign or Ontario stock would have been selected; and in either case the results would have been very disastrous.

Considering that the total assets of the banks have been more than doubled in the nine year period, and that the profits of the banks have almost doubled, the increase in the rate of return on bank stocks appears very moderate indeed. It would not be surprising if there existed among the bank stockholding class some disappointment over the results obtained. Perhaps one reason why the stocks of the good banks sold so high in 1903 was that they had then much less competition in the home investment market. Nine years ago there were not so many attractive bonds and other securities offered to the Canadian public. The bank stocks were looked upon as safe and the investment of certain conservative classes converged upon them to a greater extent than is the case at present. The appearance of many other attractive securities, and the increased volume of the bank stocks themselves proved depressing factors. Probably the Sovereign and Ontario failures also had considerable effect in preventing bank stock quotations from rising.

But it should be clear enough that the prospects for the bank stocks now are decidedly better. Some people suppose that the owners of the stocks of the best banks receive much higher dividends.

There is much in the situation to encourage that supposition. It is unlikely that so large percentage of current earnings will be appropriated for the rests now that those funds have been brought within a few millions of the capital. In 1911, nineteen per cent. of the ordinary earnings went to strengthen the rests; in 1910 the proportion so applied was 29 per cent.; in 1909, 15 per cent. in 1908, 24 per cent.; in 1907, 10 per cent.; and in 1906 about 30 per cent. In the form of dividends the stockholders have had 57 per cent. of the ordinary earnings in 1911 61 per cent. in 1910; 64 per cent. in 1909; 63 per cent. in 1908; 59 per cent. in 1907; and 59 per cent. in 1906.

On the average the stockholders have been given little more than 60 per cent. of the ordinary earnings. If their proportion were raised to 70 of the earnings the 10 per cent increase would make the dividends some $1,800,000 larger and the average rate of dividends on paid-up capital would rise about 1¾ per cent. There seems to be no reason to doubt that in the course of a few years the dividends of the best banks will be in the neighborhood of 20 per cent., i the existing Canadian prosperity continues. Already several of the banks are earning 20 per cent. on their capital stock. These large earnings, it should be noted, are not the result of increased charges. The steady increase is due in part to the re-investment of stockholders' profits in the business and in part to the steady growth of the deposits. On the whole the charges levied on the public have fallen, and the tendency over a long period of years is downwards. But when a bank's deposits are 10 or 12 times its capital, it can show a larger ratio of earnings than when its deposits are only or 6 times its capital. Usually, it can show a larger ratio of earnings upon capital even when the margin of profit (between discount rate and deposit rate) is narrowed.

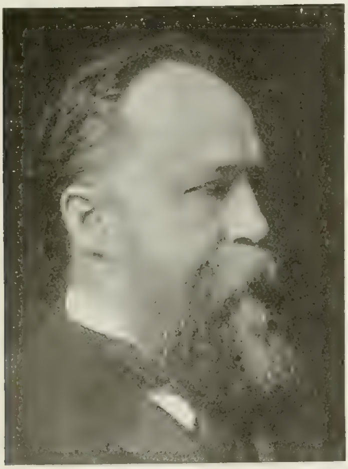
HOW THE BANKS HELP DEVELOPMENT

Advantages of the Branch Bank System — Hundreds of the Largest Bank Credits Are Granted at Places Far from Great Cities

By SIR EDMUND WALKER, C.V.O., LL.D., D.C.L.

In Canada there has always been a great deal of discus-ion about banking, but except at times when loss has come rom the failure of a bank there has been little feeling shown gainst banks as a whole until during the past two or three ears. This is partly due to the failure of some banks attend-d by unusual scandals and to the curious desire of the losers o blame the other banks as if they were all somehow re-ponsible for the behavior of each other. Another cause, owever, is the large borrowing requirements of our new estern provinces. Here we have rapidly increasing com-unities of people full of enterprise out of all proportion to he capital they possess, a repetition of the conditions attend-ng the settlement of the western part of the United States, xcept that in our case the number of new-comers is enorm-usly greater relatively to the population already existing.

There is the strange notion that it is the duty of the banks lways to have money to lend, and there is the sharp dif-erence of opinion as to the prudence of making many of the oans required because the bank thinks it has learned the imits of safety which must be observed. There are therefore nough people who have been refused help by a bank to cause onsiderable discontent, and some borrowers in thinly settled arts of the West where it is difficult to pay the expenses of a ank, who see no reason why they should pay more interest han in Toronto or Montreal. It is true they pay more for lmost everything else they buy, but that is forgotten when hey launch their complaints against banks.



SIR EDMUND WALKER, C.V.O., LL.D., D.C.L.

Decennial Revision of the Act.

By what was merely accidental at first we have ettled down to the practice of a decennial revision of he Bank Act. With us banking is under Federal control lone. The charter of no bank runs for more than ten years nd all expire at the same time. Revision of the Act is not ctually demanded at this moment but it is natural, and the abit is so settled that should the Government be unable to ake up the discussion of the Bank Act in the session preced-ng the expiry of the charters, the charters are not renewed or the ten years, but merely for long enough time to permit f the discussion and amendment of the Act. Whatever we ay have to face in the future and, of course, we are but a oung country with relatively small affairs as yet, this de-ennial revision has been of great value to the country as well s to the banks, thus far. At such a time everyone has the hance to express his opinion, and when the new Act is assed there is a general feeling that things have been set-led for the next ten years although of course any subsequent arliament may do what it pleases with the Act.

The banks naturally take a large part in the discussion hough whenever they propose reforms they are generally treated as if they were seeking additional favors. As a matter of fact, however, every great reform in our system in the last two revisions has been proposed by the banks and they are all reforms in the interest of the people. In no case in recent years have the banks asked for an extension of their powers because such new power would be a new source of profit.

Give People the Best Service.

It is true that any reform in the practice of banking which improves the service to the people will incidentally make profit for a bank by increasing the number of transactions, but that is surely just the mutuality of interest that society desires to establish. I fancy we are as selfish as any other body of bankers, but we have at least learned that the only safe plan for preserving the right granted by the people to carry on the business of banking is to give them the best possible service of banking.

In Canada, while thirty years ago we waited for a town to have a fair-sized population, say 2,000, before opening a branch, to-day confidence in the future of our West is so great that bank offices spring up at the divisional points of railways through absolutely new country, along with the first shopkeepers, and during the past year several branches have been established in the Peace River country of Northern Alberta, hundreds of miles in advance of the railroad. Of course such branches will not pay for a year or more, but a carefully administered Canadian bank should have a clear idea as to how much of its present profits it will spend in such development. Not only will it suffer if it has not enough breadth of view to make the present sacrifice, but if all banks took the narrow view and held back, we should soon hear from the people who expect us to do our share in developing the country. During the past ten years of development in the Canadian West the banks have been second to no other branch of industry in this work, and it is quite safe to say that in the history of the world no other settlement of people over great areas of country has ever been accompanied by such banking facilities.

East and West Treated Well.

That the head office of any Canadian bank is likely to favor the East as compared with the West, or large cities as compared with small, or the city where the head office is situated as compared with other places where it has established branches is, I think, quite at variance with the facts, and certainly quite opposed to the true interest of any bank. Hundreds of the largest bank credits in Canada are granted at places far from large cities and where it would be quite impossible for a local bank to grant any important percentage of the credit required. Doubtless there are many men in Canada who have tried to start ventures in small places, who feel sure that had there been a local bank with its board to appeal to they would have succeeded. They do not consider the far greater number of men with uncertain ventures who have been refused loans by banks in the large cities. The Canadian bank wants practically all the good business it can secure, but in a time of rather rash inflation the judgment of the bank is apt to be too conservative to please the public, although perhaps not always conservative enough to secure safety.

As to Bank Deposits.

A Canadian bank is a great clearing house into which its deposits from all Canada pass and out of which its loans to all Canada are taken, without any effort being necessary to transfer the surplus money in one locality to another locality where there is a surplus in loans over local deposits. Thus if the branch manager establishes a credit for a new industry it is not necessary that he shall find the money at home, and in fact in many cases this could not be done.

If it is an important service to the country to equalize, as far as possible, the distribution of loanable capital throughout the country, it is clear that a corresponding service will be rendered by the securing of deposits from the people so as to make every otherwise idle dollar effective for the progress of the country. In the main the banker is eager to obtain deposits in proportion as he finds that loans are required, and thus the matter seems to settle itself. But unless the machinery is in existence for distributing the loanable capital so that it will easily flow from where it is not needed to where it is, there will not be that pressure to obtain deposits which results in leaving the minimum amount of money idle in people's pockets. By the use of cheques for the payment of the smallest debts, and the consequent extensive development of the clearing-house, we have conserved loanable capital to a much greater extent than in most other countries

Ninety Per Cent. of Deposits.

The Chartered banks hold about 90 per cent. of the deposits and these are not to any extent deposits in one bank from another, but are essentially the deposits of the people and their industrial institutions. Such a large percentage of the total deposits has been secured by having in each branch of a bank a Savings Bank Department, so that while the Canadian bank is unwilling to pay interest on an ordinary current account, it is willing to take any deposit literally from one dollar upwards upon the terms of its Savings Bank Department and pay interest thereon. Because of this there are only two important Savings banks of the ordinary type in Canada. These are in Montreal and Quebec, and serve mainly Canadians of French origin. For similar reasons the deposits with the two kinds of Savings banks carried on by the Government have increased only 45 per cent. in 20 years while the deposits of the Chartered banks have increased 560 per cent. I think therefore it must be admitted that with the Savings Bank Departments, through which the smaller depositor in a remote village may secure the obligation of a great bank, and the branch system as applied also to lending money, we have created a most excellent public service for the securing of loanable capital and its equable distribution.

Lending of Money on Farms.

If, however, the small amount of deposits gathered in Canada by the Special Savings banks and the Mortgage Loan societies represented all that was available for land banking as compared with commercial banking, the situation would be far from satisfactory. The lending of money on farms and other classes of real estate is fortunately well organized. The Mortgage Loan societies are established mainly to obtain loanable capital in Great Britain and their few Canadian deposits are merely an incident in a larger business. They have throughout our West effective branch establishments or other machinery for securing loans. But whereas 25 or 30 years ago they nearly controlled the land-banking of Eastern Canada, they now compete with large life insurance companies, numerous trust companies, wealthy private estates, and even organizations of French, Dutch and other foreign capital, bent on securing loans mainly against the farms in our new western provinces.

OTHER THINGS THAN MONEY

Maintenance and Improvement of Standard of Thought and Action Will Help Canada to Write Her Name High Upon the International Scroll

BY HON. W. H. HEARST.

Feelings of hope and courage stir a Canadian's heart at this time when he seeks to look into his country's future.

The grounds for these feelings are strong, abundant and sure—a land full to repletion with raw material for the arts and industries and with agricultural possibilities unsurpassed, a land of splendid waterways and majestic rivers furnishing limitless power to light and heat our homes and turn the wheels of commerce; with railway and canal systems which, although only in their infancy, are nevertheless already the admiration of the world; a land half-way between Europe and the Orient, compelling trade with both; a northern yet temperate climate, maturing the best qualities of fruit, grain and animals, and developing the highest and

st types of mankind; a people seeking quarrel with none d determined on peace, but who nevertheless would shrink om no sacrifice for national weal and national honor; a ople whose ideals close in truth, religion and the common od; a people determined to make the northern half of orth America the home of a freer, nobler, higher type of vilization than has ever yet flourished. To such a land d such a people destiny can deny little.

The future being unknown is uncertain. Canada has any difficulties to overcome and problems to solve, one of e most important of which is, the assimilation of the reign immigrants, strangers to our tongue, our institutions d our ideals, who are pouring into our country, so that ey may bring strength not weakness to our national aracter. But we have happily no problems or difficulties at will not readily yield to a wise, patriotic citizenship and enlightened statemanship.

If there be no faltering on our part, no lowering of andards of thought and action, no debasement of motive, d if we are but worthy of our forefathers and the country which we live, Canada cannot fail to write her name high upon the scroll of the nations of the world and to fill the entieth century with a glory of achievement.

◆

NO CAUSE FOR ANXIETY FOR CANADA'S FUTURE

hy We Are Borrowing Heavily—High Interest Rates Ruled in Early Days—Lack of Labor and of Technical Men

BY SIR EDMUND OSLER, M.P.

In these days of Canadian prosperity, the charge has en made that Canada is borrowing too much money, this plying to government, municipal, railroad and corporation ans. It is true that we have borrowed an enormous amount, t if that borrowed money is going to earn the interest at it carries and leave a surplus profit, then the borrowing perfectly legitimate, no matter how large the sum may be. one doubts that the money Canada has borrowed during e past few years, will earn its interest and leave a very rge profit in addition.

Money has been borrowed to develop the natural re- urces of the country and especially to develop the Western ovinces. One item alone—the increased value of land in e prairie provinces—would repay very many times over the al amount of money that has been borrowed. The Cana- an Pacific Railway has been perhaps the largest borrower; t who can question that the money borrowed is not earn- g its interest and has, in addition, added largely to the hes of the country?

w Population and Borrowing.

With an increase of three or four hundred thousand pulation each year through immigration, the money re- ired to start those people must be to a very great extent rrowed. Certainly for two years it will return no interest. ter that time it will not only return interest but also a ndsome profit to those who have borrowed directly or in- ectly. The influx of 300,000 new people means that they ist be supplied with all the necessaries for starting life in s country. This expenditure creates a market for house- ld goods, farm implements, etc., greater than would be quired by three or four times the number of people only ying ordinary yearly requirements and not spending any- ng on capital.

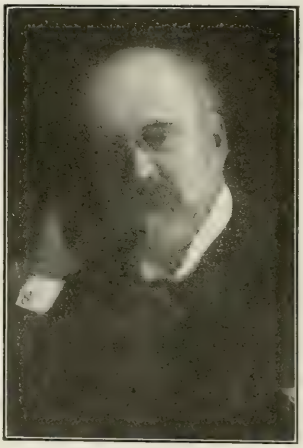
All periods of prosperity bring with them a certain ount of wildcat and visionary financing. Canada has had full share of those schemes. In many cases the lenders o have lost money have only themselves to blame because ey could have satisfied themselves as to the worthlessness the enterprise involved, with very little enquiry.

The two greatest needs of Canada to-day are capital d labor. The Dominion as a whole is somewhat in the sition of the Western farmer who is trying to develop a ction of land with labor and capital sufficient only to look er a quarter section.

It is asserted that our municipalities, especially in the est, are borrowing far too much money. Undoubtedly ey are borrowing very heavily, but that is almost a neces- y, as the towns in the West are growing so rapidly. They ist have drainage, light, water and street pavements. They ve to accomplish in two or three years what similar towns the older provinces did in twenty or twenty-five years. e newer towns have been accustomed to get money at very low rates, and feel keenly the fact that they are not now able to borrow without paying a considerably higher rate of interest than they did a few years ago.

It will be within the recollection of the older financial men, however, that Ontario municipalities not many years ago paid very high rates of interest for their money. For instance, when Toronto, Grey and Bruce, the Toronto and Nipissing and the Credit Valley Railways were promoted, the city of Toronto and the counties through which those roads ran voted large bonuses for which 20 years 6 per cent. bonds were issued. I remember one case where about $1,000,000 of the bonds issue by Toronto and the counties to the above railways were sold, 6 per cent. 20 year bonds at 89 cents. Even the smallest municipality in the West is able to obtain a better rate now for its securities.

One of the outstanding conditions as a result of Canadian prosperity and one which must be regarded as most undesirable is the wild speculation in suburban property, to some extent in Ontario and to a greater extent in the Western provinces. Great loss must result from this speculation. Prices have been paid for outlying lots near towns and cities that can probably never again be realized, and under most favorable conditions it will take years before they are worth the figures that have been recently paid. However, with all this development and speculation, the deposits in the Canadian banks have continued to largely increase, showing that a substantial proportion of the population has not participated in this speculation and showing that as a whole the people of Canada are of a conservative character.



Sir Edmund Osler, M.P.

No Cause for Anxiety.

Another need created by rapid development is that for trained men to take charge of the number of legitimate enterprises that are being called into existence. This want is found not only in new enterprises but also in connection with old established businesses. It is difficult to obtain trained and technical men who take head positions. There are not enough such men to go around.

Taking a broad view of the situation I do not think there is any cause to feel anxious as to the future of Canada, and money invested with reasonable intelligence will yield good returns to the lenders and will give large profits to the borrowers.

◆

HE LEFT THE MONEY

Here is a story told by Mr. F. Williams Taylor: "There was a run on the branch of a secondary Canadian bank in a certain city west of Toronto. The manager, an Irish Canadian, was in his outside office endeavoring to allay the fears of his depositors, among whom was a farmer laboriously inscribing his name on the back of a deposit receipt for $10,000 prior to its withdrawal. The manager said: 'Caleb, what are you going to do with this money?' 'Oh,' said the farmer, 'I am taking it across the road to the Bank of Montreal; they tell me it's all right.' 'What!' said the manager, 'the Bank of Montreal? Haven't you seen their figures?' 'No,' said the farmer, 'what about them?' The manager hastily secured a copy of the Bank of Montreal balance sheet, and triumphantly pointing to its liabilities said: 'There, what do you think of that? Total liabilities aggregating $240,000,000, while our total liabilities are only $20,000,000.' 'Good heavens,' said the farmer, 'I had no idea of this. I had better leave the money where it is.' And he did."

CANADA'S BRANCH MINT HAS COINED OVER SIXTY-TWO MILLION MONEYS

In a little less than five years, the branch of the Royal Mint at Ottawa has coined and received for issue, 494,621 gold, 41,474,218 silver, and 20,396,757 bronze moneys. These had a total value of $8,068,601. The above statement of these moneys, covering the period from January 2nd, 1908, to November 30, 1912, has been supplied to *The Monetary Times* by Dr. James Bonar, Deputy Master of the Royal Mint at Ottawa.

Part of the metal used in the Ottawa Mint was purchased in Canada and part in the United States.

Illustrations are given of the ten-dollar and five-dollar gold pieces, of the one-dollar silver piece, and of the one cent of Canada. The obverses of these coins all bear the crowned effigy of His Majesty wearing the Royal Robes and looking to the left, with the inscription "Georgivs V Dei Gra: Rex Et Ind.: Imp:" The reverse of the gold pieces bears the arms of the Dominion on a shield within branches of the maple, with the word "Canada" above, and the date and denomination below. The reverse of the dollar bears the denomination of the coin, the word "Canada" and the date within a wreath of maple leaf, and the reverse of the cent the denomination of the coin, the word "Canada" and the date within an ornamental design. Though these pictures include the dollar, the dollar has not been coined for circulation.

The latest official report of Dr. Bonar is for 1911 and is dated March, 1912. It is contained in the forty-second annual report of the Deputy Master and Controller of the Mint in London.

"It was not possible," he says, "for 1911 to rival 1910 in the number of pieces struck. The sovereign dies of the new reign were received in Ottawa on February 20th, 1911, those for bronze coin on May 17th, and for silver coin on July 17th and 24th. If comparison were confined to the last six months of each of the two years, it would show a normal production for 1911. The total number of pieces struck in 1910, July to December, was 12,659,875, while in 1911 it was 12,505,374.

Demand for Silver and Bronze.

"The demands for silver and bronze coin were met during the first six months from the stock or reserve (of $570,628.10 in silver and $11,427.88 in bronze) to which reference was made in the third paragraph of my last report. The bronze of this reserve was exhausted at the end of June. Of the silver, the pieces of ten cents and five cents were exhausted at the end of July, of twenty-five cents in the second week of August, and of fifty cents at the end of September. Silver coins to the value of $1,391,000 and bronze to the value of $54,480 were issued to the Dominion Government during the year.

"Gold was received in greater quantities than in 1910, and sovereigns were struck to the number of 274,762, as against 28,917 in 1910. Canadian gold coins, though authorized, were not struck, and the first Pyx examination of Canadian coins, held by the Assay Commissioners appointed under the Act of 1910, dealt solely with silver coins.

"Of the silver and bronze pieces struck in 1911,
209,972 were pieces of 50 cents
1,721,341 " " 25 "
2,737,584 " " 10 "
3,692,350 " " 5 "
4,663,486 " " 1 cent.

"In addition to the above, 1,000 sets of specimen silver and bronze coins were made towards the end of the year. The total number of pieces struck in all metals throughout the year was thus 13,304,495.

"Of the silver coins, $45,487 were made from worn coin received from the Finance Department, which also sent $204.75 in worn bronze (chiefly English) for re-coinage. Of the sovereigns, 3,406 were made from worn coins (English and American) sent by banks.

The Canadian Finance Department has continued the deportation of foreign silver. In the financial year ended March 31st, 1912, foreign silver to the value of $1,791,187.08 was so deported, of which from:—

Ontario	$ 757,381.03
Quebec	212,506.66
New Brunswick	25,535.00
Nova Scotia	19,811.47
Manitoba	193,231.06
British Columbia	468,394.60
Alberta	61,550.56
Saskatchewan	52,776.70
	$1,791,187.08

Over five thousand persons were visitors to the Canadian Mint last year.

OCTOBER IS CANADA'S CRITICAL MONTH

That is the View of London—The Dominion, Financially, is More Sober and Self-restrained Than Hitherto—Some of Its Problems Discussed

BY W. R. LAWSON.

The month of October is, in some respects, the most critical time of the year for Canadian affairs in London. We hen know what the wheat crop is going to be and how it is ikely to be financed. On that depends the winter operations of the Canadian railroads and the market effects on their stocks. Plans for the coming year are based on these results and anticipations. Public loans, company promotions and flotations generally are got ready for launching at a avorable moment. All these contingencies are discounted n the London Stock Exchange and existing securities are nade as good as possible to facilitate the launching of the new ones.

October is, in short, a keynote month, and, as far as we can judge, it struck a cheerful note in 1912. It was more subdued than it used to be in the heyday of the golden wheat boom. The glamor of that El Dorado age, when every settler in Alberta or Saskatchewan was regarded as a possible millionaire, has passed away. But it has left behind t a vast amount of solid wealth, not merely in money and scrip, but in human brain and muscle. The Canada of to-day s financially much more sober and self-restrained than was he Canada of two or three years ago. It has begun to learn something of its limitations and to realize that even in the Great North West fortunes are not kicking about on every street.

Future of Railroad Financing.

In addition to the usual problems of the season there were some special ones to be grappled with last year. The movement of the crop has raised a number of banking and ailroad questions of supreme difficulty. Another hard nut o crack will be the further financing of the transcontinental ailways—the Grand Trunk Pacific in particular. Then there s the primeval land question which faces one way in this country and exactly the opposite way in Canada. While your land question is how to get a vast prairie settled, cultivated and populated, ours is how to get the smallest crop nd the largest amount of taxation out of it. The contrast between the two policies has a certain weird humor about it.

Though Canada remains surprisingly free from the ingle land taxerage, there have been lately ominous symptoms of it which are not escaping attention here. It is odd hat while the other Dominions, especially Australia and New Zealand, have been badly bitten by it, the North West should ave escaped so easily. But your single taxers had uncongenial soil to start with. A community of small freeholders s not in great danger of being captivated by a new Henry George. Nevertheless, land taxes are becoming a bit of a bogey for shareholders in Canadian land companies. The Canadian Pacific Railway is exempt from this danger as well s from most other political troubles, but it is casting a hadow on less fortunate concerns.

Financing the Crop Movement.

The crop moving scare is usually in full blast in October, nd its first effects are apparent in a decided tightening of money rates. On the Stock Exchange, as well as in Lombard Street, and in all industrial circles, the banks, as a rule, get the whip-hand and though they use it as gently as may e, it soon begins to tell on prices. A September boom in Wall Street frequently gives the latest turn to the screw, and f it is persisted in, an old-fashioned autumn is not at all impossible. Wall Street then feels the twinge of a 7 per cent. rate for overnight loans which is more significant after a large transfer of New York stocks to London.

The lateness of the harvest in the North West and the moral certainty that an exceptionally large amount of last year's wheat will have to be left west of the lakes all winter, raises a serious question as to how it is to be financed. If the London banks, which do most of this business, had no other heavy handful to look after, the task would be easy. But the same money cannot be lent to two or three different people at the same time. Just now a very large share of our banking capital is locked up in industrials of one sort or another. Many millions of it are on your side and other millions have been absorbed by the industrial boom at home.

Special Creations of Credit.

Up to a certain point it can be replaced—temporarily, of course—by what Argentine financiers call "special creations of credit." But that is only shortening the end of the blanket to lengthen the other end. Should it be overdone we might have a repetition of the American collapse of 1907, not to mention the Argentine crisis of 1890. Cautious banks feel that the strain of universal and ever increasing prosperity—which always involves proportionate borrowing—may soon become too heavy for them. They are therefore taking in sail as the plethora of short money indicates. Unfortunately, it may not be the worst kinds of banking business that get pinched most severely in the process. Speculative engagements are more difficult to curtail than the discounting of trade paper.

W. R. LAWSON.

I have heard the question of crop movement banking discussed by eminent authorities on both sides of the Atlantic Most of them agreed that it would be quite practicable to arrange for minimizing the volume of credit needed to transport the surplus wheat of the North West to the British market. This might, in fact, be made a special branch of banking and placed to a large extent outside of the violent fluctuations of the money market which are so troublesome to business men in the autumn. It is an anomaly that the business of marketing the crops of the world which calls only for the simplest and safest kind of banking, should often be the greatest disturber of monetary peace. Surely a remedy could be found for this annual nuisance, but our bankers have apparently no time to spare at present for such prosaic questions.

◆

Money was in strong demand in Canada during the past year, while in London and New York, in which outside markets leading Canadian banks are chiefly interested, the rates continued low until September, since when more stringent conditions and higher rates prevailed. With buoyant trade practically the world over, and with, as far as we can judge, a probable continuance for some time of such conditions, money is not so readily obtained. Those seeking capital should have regard to existing conditions and also to the fact that borrowers cannot hope to name their own terms.—Mr. H. V. Meredith, Montreal.

WESTERN CROPS AND THE BANKS

Lack of Terminal Facilities at Head of the Lakes and Railways East of Fort William Are Prime Causes of Blockade—Help of the Banks

BY CHARLES A. DUNNING.

No thinking Canadian citizen can dispute the fact that there is a Western problem to-day. Eastern Canadians who travel through the West during the grain marketing season are speedily convinced that it is a most serious problem. The West is in the midst of the annual grain blockade, with all its attendant financial stringency and consequent discomfort for the grain grower and his family.

Many remedies have been proposed for this annual condition. Some armchair farmers have advised the wheat grower to go in more for mixed farming, raising horses, cattle, etc., ignoring the fact that practically all of our great wheat plains in the West are remarkable for their lack of water, thus rendering mixed farming a rather hopeless proposition. In those portions of the country which are well watered, mixed farming is being carried on to an increasing extent, and undoubtedly helps to overcome the effects of a grain blockade. At the same time, even the mixed farmer must market the grain he grows, and the winter time is the natural time for this work, owing to the fact that the cultivating and growing season is so very short in the West, thus compelling the farmer to use every horse and every man available during that period of the year when it is possible to work on the land. This condition prevents the farmer from spreading the marketing of his wheat over the whole year.

Terminal Facilities and Railways.

The annual blockade is caused, not by a shortage of cars, as many suppose, but because the development of terminal facilities at the head of the lakes and the building of railways east of Fort William is not keeping pace with the increased production of the West. It is true that the Canadian Northern and Grand Trunk Pacific will haul wheat east from Fort William in a year or two, but it is likely that by the time these two roads are in working shape, the grain production of the West will have increased to such an extent as to be just as far ahead of transportation facilities as now.

The average number of cars inspected per day at Winnipeg for the current season will be close to the 800 mark; the average daily capacity of the Canadian Pacific Railway east of Fort William after the close of navigation, judging by past experience, will be about 250 cars per day; terminal elevator capacity at Fort William and Port Arthur is less than 30,000,000 bushels. A little simple arithmetic discloses the fact that the blockade is caused not by reason of the railways not possessing sufficient cars, but because the cars they cannot be utilized to the fullest extent by reason of congestion at the head of the lakes. There is no doubt that our three railway corporations are doing great things in their attempts to keep pace with Western development, but the problem is one of national importance, and the nation as a whole must see to it that the people who are invited from other countries to make their homes in the West, do not suffer because the product of their labor cannot be brought rapidly enough to the markets of the world.

In any case, the present problem must remain with us to some extent. Even if provision were made at once for more terminals and railways east of Fort William, the building of them would take considerable time, and therefore, any suggested measures which would tend to relieve the distress attendant upon blockade conditions, are worthy of serious consideration.

Assignment of Farmers' Grain.

The suggestion has been made that if the banks doing business in the West would loan money to farmers upon the security of grain in their granaries, the financial difficulties incidental to grain blockades, woud be largely overcome. Banks in the past have been unable to loan money on such security, because the Bank Act does not allow farmers to give an assignment of their grain in the same way as other tradesmen and merchants are allowed to do. Thus when money is loaned to farmers by banks, it is not upon definite security, but is based upon the general financial standing of the borrower. The general financial standing of many of our farmers does not appear very favorably on a bank statement in the fall of the year, but at the same time they may possess wealth in the form of grain, which, if it could be assigned to the bank as security, would provide them with plenty of money to discharge their more pressing obligations. Curiously enough, Section 88 of the Bank Act allows chartered banks to take assignments of grain as security from every class of dealer who has anything to do with the marketing of grain, but does not allow the bank to take the same form of security from the man who grows it.

Farmer Should Get Half Value.

The grain business of the West is conducted entirely with money borrowed from the banks, and the security given by the grain dealer is an assignment under Section 88 of the Bank Act. This being the case, why should not the farmer, when blockade conditions render it impossible for him to sell his grain to the dealer, be able to raise money on the grain in the same way as the dealer raises it? If the farmer could get only fifty per cent. of the estimated value of grain in a good granary, the result would be the building of better granaries and considerable assistance during the blockade.

Charles A. Dunning.

The Bank Act will be before the House of Commons for revision during the coming session, and doubtless the organized farmers of the West will make representations in connection with the matter just referred to. It is to be hoped that the suggestion will meet with favor, and if adopted in legislation, the chartered banks will have the opportunity of assisting very materially in the solution of the Western problem.

◆

CANADIAN WHEAT IN BOND

The special committee appointed by the New York Produce Exchange to prepare rules under which trading in Canadian wheat might be carried on in the New York market, has prepared its report and announces the provisions under which these transactions may occur. It recommends the adoption of what is known as rule No. 40, "regulating transactions in bonded wheat for future delivery," by providing that wherever the term "bonded wheat" occurs in the rules now regulating the grain trade, it will be understood as meaning "Canadian Grown Wheat" in bond at the port of New York. All such wheat is to be of Dominion of Canada official inspection as to grades. All offers to buy or sell for future delivery shall be in lots of 5,000 bushels or multiples thereof, unless otherwise stipulated.

The following grades of bonded wheat are deliverable on contracts for future delivery:—

No. 1 Northern, flat.
No. 1 hard, at a premium of 1 cent per bushel.
No. 2 Northern, at a discount of 3 cents per bushel.
No. 3 Northern, at a discount of 8 cents per bushel.

The inspector-in-chief or his deputies shall inspect as to condition and give a certificate of examination prescribed by the exchange. The party delivering bonded wheat shall furnish receiving party with a certificate from the common carrier, stating that said wheat is covered by a proper bond. Otherwise domestic grain rules shall govern in the bonded grain trade.

The rules went into effect on January 2nd, 1913. The special committee proposing the rules were Frank I. Macguire, W. W. McCord, W. H. T. Moore, W. J. Brainard, and W. Knight.

CANADIAN AND U.S. BANK SYSTEMS COMPARED

Elasticity of Note Circulation Helps the Dominion in Times of Panics or Crises—President Taft Says the Republic's Banking System Lacks That Quality

THE UNITED STATES SYSTEM.

The keynote of the United States system—if it can be called a system—is individuality or personality. In other matters than banking the people are much opposed to centralization. The States are jealous of the federal authority. The State Governments as well as the Federal Government have power to create banks; and both create them, by hundreds, every year. There are at present over 18,000 banking institutions in the States—some six thousand odd under Federal control, the rest under State control. As a rule the business of an United States bank—either National or State, is confined within a single office. Branch banks are not in favor. The bankers do not want them, because many thousands of bank presidents and directors would have to give place to the branch manager; and the business men and people do not know what an enormous amount the little local banks cost them.

The United States banks are of two kinds—commercial and financial. The big financial banks in the centres employ their resources pretty largely in financial loans and investments. Even the commercial banks do not devote their funds to financing of mercantile borrowers to the same extent as do the banks in the United Kingdom and Canada. Taking all the National banks their commercial paper amounts to less than one-third their total assets. The Canadian proportion is nearly double that.

Owing to the banking methods prevailing in the States considerably more capital is required to carry on manufacturing or wholesale business than is required in Canada. It can be proved that, in this respect the operations of the small local banks have tended to favor monopolies.

In regard to legislation there is all the time more or less tinkering and interfering by Congress and the State legislatures. Sometimes the measures are really designed for political purposes rather than to strengthen or improve the banking edifice.

The banks are subject to examination by Government officers. The National Banks are required to report condition five times a year. The summaries are published.

The United States banks have no branches abroad. A large part of the foreign exchange business of their own country is transacted by foreign institutions. The Canadian bank agencies in New York City have a good share of this business.

THE CANADIAN SYSTEM.

Canada has a system in which the banking business while highly centralized yet promises to perpetuate competition. The important banks have their branches spread over an immense extent of territory. The probability is that in number of branches they will eventually be much larger than at present. There are no privileged banks. All are on the same footing. Everyone of the Canadian institutions is a commercial bank—that is to say it devotes its energies and resources to the cultivation of commercial accounts.

One of the strongest points of the Canadian system is the high degree of organization found among the banking interests. In no country in the world are the banking interests united so closely or so harmoniously as the Canadian interests are. The Canadian Bankers' Association represents the whole of Canadian banking. Partly owing to this the relations of the banks with the Dominion Parliament—which is the only legislative body in Canada having control over banking—have been happy and beneficial for the banks and the country. The law-makers have had the good sense to recognize that bank borrowers are the principal gainers from a policy that leaves the banks free from irksome restrictions. The Canadian banks have privileges of note issue beyond those enjoyed by banks in other countries. The effect has been to enlarge their ability to assist the country's trade and industry. And arrangements are in force that make the notes absolutely safe and sound. Each institution has to place its condition in a uniform statement before the public once a month. So the banking position is clearly portrayed. Their business is not confined to Canada. There are over fifty branches abroad—in the States, Newfoundland, the West Indies, Mexico, London.

These outside agencies are a valuable advertisement for the Dominion and assist materially in developing Canadian trade with foreign countries, besides contributing to increase the profits enjoyed by the thousands of bank stock-holders at home.

Another strong feature of the system is found in the manner in which the banks adapt themselves to the conditions and circumstances of the country's trade. Banks are supposed to do this everywhere, but there are few countries in which they do it so well as in the Dominion. Practically every citizen who has banking business to do has the necessary facilities placed reasonably within his reach.

By way of comment on the two systems it might be said that the recent panic in the United States tested them pretty thoroughly. Though it had its centre in New York City and spread from thence to the various States, it nevertheless put a very severe strain upon the banks in both the United Kingdom and in Canada. The former country had to supply the greater part of the $100,000,000 gold shipped to New York, and Canada was affected because the Canadian bank reserves were largely employed in New York City, and because of the close trade and financial connections of the two countries. It was quite clear to outside observers that the utter lack of cohesion or co-operation of banking offices in the States was one of the principal factors in aggravating the crisis. But panics only come once in ten or fifteen years. It is a matter of much consequence how the banking system of any given country bears itself in the intervening periods.

The Canadian system has grown with the Dominion, and has moulded itself in a ductile manner according to the peculiar Canadian requirements. But our neighbors across the Southern boundary are not satisfied with the working of their system. They are not settled in their minds just how they will amend it. There are many particulars in which it falls short of what it should be. The disposition evidently is to amend some of the defects and not to undertake revolutionary alterations.

President Taft thinks that the most crying need of the United States is a proper banking and currency system. He admits that the existing one is inadequate and says any one who has studied the question admits it. His message to Congress last month in view of the somewhat similar conditions existing in the United States and Canada and the different banking systems in operation in the two countries, is unusually interesting. He stated that it was the business of the National Government to provide a medium, automatically contracting and expanding in volume, to meet the needs of trade. The present system lacks the indispensable quality of elasticity.

"The only part of our monetary medium," he continued, "that has elasticity is the bank-note currency. The peculiar provisions of the law requiring National banks to maintain reserves to meet the call of the depositors operate to increase the money stringency when it arises rather than to expand the supply of currency and relieve it. It operates upon each bank and furnishes a motive for the withdrawal of currency from the channels of trade by each bank to save itself, and offers no inducement whatever for the use of the reserve to expand the supply of currency to meet the exceptional demand.

"After the panic of 1907 Congress realized that the present system was not adapted to the country's needs and that under it, panics were possible that might properly be avoided by legislative provision. Accordingly a monetary commission was appointed which made a report in February, 1912. The system which they recommended involved a National Reserve Association, which was, in certain of its faculties and functions, a bank, and which was given through its governing authorities the power, by issuing circulating notes for approved commercial paper, by fixing discounts, and by other methods of transfer of currency, to expend the supply of the monetary medium where it was most needed to prevent the export or hoarding of gold and generally to exercise such supervision over the supply of money in every part of the country as to prevent a stringency and a panic.

"The stock in this association was to be distributed to the banks of the whole United States, State and National, in a mixed proportion to bank units and to capital stock paid in. The control of the association was vested in a board of directors to be elected by representatives of the banks, except certain ex-officio directors, three cabinet officers, and the controller of the currency. The president was to appoint the governor of the association from three persons to be selected by the directors, while the two deputy governors were to be elected by the board of directors. The details of the plan were worked out with great care and ability, and the plan in general seems to me to furnish the basis for a proper solution of our present difficulties.

Government Should have More Voice.

"I feel that the Government might very properly be given a greater voice in the executive committee of the board of directors without danger of injecting politics into its management, but I think the federation system of banks is a good one, provided proper precautions are taken to prevent banks of large capital from absorbing power through ownership of stock in other banks. The objections to a central bank it seems to me are obviated if the ownership of the reserve association is distributed among all the banks of a country in which banking is free. The earnings of the reserve association are limited in percentage to a reasonable and fixed amount, and the profits over and above this are to be turned into the Government Treasury. It is quite probable that still greater security against control by money centres may be worked into the plan.

No Sound Objections to Central Bank.

"Certain it is, however, that the objections which were made in the past history of this country to a central bank as furnishing a monopoly of financial power to private individuals, would not apply to an association whose ownership and control is so widely distributed and is divided between all the banks of the country, State and National, on the one hand, and the Chief Executive through three department heads and his controller of the currency on the other. The ancient hostility to a National bank, with its branches, in which is concentrated the privilege of doing a banking business and carrying on the financial transactions of the Government, has prevented the establishment of such a bank since it was abolished in the Jackson Administration. Our present National banking law has obviated objections growing out of he same cause by providing a free banking system in which ny set of stockholders can establish a National bank if they omply with the conditions of law. It seems to me that the National Reserve Association meets the same objection in a imilar way; that is by giving each bank, State and National, in accordance with its size, a certain share in the tock of the reserve association, non-transferable and only to e held by the bank while it performs its functions as a artner in the reserve association."

rges Monetary Commission's Plan.

The report of the commission recommends provisions or the imposition of a graduated tax on the expanded currency of such a character as to furnish a motive for reducing e issue of notes whenever their presence in the money maret is not required by the exigencies of trade. In other ords, the whole system has been worked out with the reatest care. Theoretically it presents a plan that ought to ommand support. Practically it may require modification in arious of its provisions in order to make the security against buses by combinations among the banks impossible. But the face of the crying necessity that there is for improveent in the present system, President Taft urgently invited e attention of Congress to the proposed plan and the reort of the commission, with the hope that an earnest conderation may suggest amendments and changes within the eneral plan which will lead to its adoption for the benefit the country. There is no class in the community more terested in a safe and sane banking and currency system, e which will prevent panics and automatically furnish in each trade centre the currency needed in the carrying on of the business at that centre, than the wage earner. There is no class in the community whose experience better qualifies them to make suggestions as to the sufficiency of a currency and banking system that the bankers and business men.

Wage Earner and Farmer.

"Ought we therefore," asked the president, "to ignore their recommendations and reject their financial judgment as to the proper method of reforming our financial system merely because of the suspicion which exists against them in the minds of many of our fellow citizens? Is it not the duty of Congress to take up the plan suggested, examine it from all standpoints, give impartial consideration to the testimony of those whose experience ought to fit them to give the best advice on the subject, and then to adopt some plan which will secure the benefits desired?

"A banking and currency system seems far away from the wage earner and the farmer, but the fact is that they are vitally interested in a safe system of currency which shall graduate its volume to the amount needed and which shall prevent times of artificial stringency that frighten capital, stop employment, prevent the meeting of the pay roll, destroy local markets, and produce penury and want."

Strength of Canada's System.

In his report on the Canadian banking system, to the National Monetary Commission of the United States, Professor Johnson, of New York University, emphasized the advantages of the elasticity of our system, a feature which it is proposed to strengthen in the United States. "Canada's banking system," he said, "contains two features that give it great strength under the threat of panic or crises. One is the elasticity of the note circulation, the other the solidarity or unity of the system. The reason why Canada has never suffered from a currency panic lies on the surface. The banks always have cash enough to meet the demands of their depositors. Instead of being in the position of their brethren across the border, that is, anxious to conserve their cash, they welcome any legitimate opportunity for the increase of their circulation. Except for a few weeks during the panic period of 1907, when practically all the banks of the United States had suspended cash payments, the Canadian banks have always had currency on hand in excess of their customers' needs. This currency consisted of their own notes. To their customers the bank notes are perfectly good money. Even though people got suspicious of the solvency of a Canadian bank, its notes would not be in disfavor."

◆

CANADA'S POST OFFICE BUSINESS

The number of post offices in Canada is 13,859, an increase of 535. Postal note offices increased by 569, money order offices by 172, and savings bank offices by 21. There was an increase of 1,869,867 miles in the mileage of mail routes. The number of letters carried in the mails was 566,140,000, and post cards, 54,727,000. The total revenue was $10,482,255, and the expenditure $9,172,035.

There are 900 rural mail routes and 25,000 boxes. From September, 1908, to the end of the fiscal year, 1912, 2,740 annuities were sold, and $1,319,924 received.

The service rendered in the actual transmission of the mails included the carriage or forwarding of 566,140,000 ordinary letters, of 54,727,000 post cards, 13,021,000 registered letters, 11,968,000 free letters and 115,287,000 other pieces of matter, and 213,682 postal packages—all mailed in Canada.

The amount of money transmitted by money orders and postal notes last year was $91,410,505. This is more than double the amount of 1906-07. The international features of the money order business are of interest. In the matter of orders issued, Great Britain is in the lead with $11,038,000, the United States coming second with $10,168,000. Ther follows Austria with $3,687,000, Italy with $3,443,000, Japa with $921,000, Hungary with $516,000, and other countrie with lesser amounts. In this matter the balance is against Canada, a fact due in large part to the immigrants from the countries mentioned and others.

EVOLUTION OF ACCOUNTANCY IN CANADA

Seven Societies Are Chartered—Auditing of Banks—Growing Complexity of Modern Commercial and Financial Problems

BY BRYAN PONTIFEX, C.A.

Accountancy continues to make progress in Canada, and to be more appreciated and recognized as a profession necessary to the complexity of present-day business and financial intricacies.

There are seven societies of Chartered Accountants in Canada. The oldest is the Association of Accountants in Montreal, formed in 1880, and which has 58 members. The Institute of Chartered Accountants of Ontario obtained their charter in 1883, and has 172 members. The Manitoba charter was granted in 1886, and that institute has 50 members. Fourteen years later, Nova Scotia accountants obtained a charter, and have now a membership of 19. British Columbia's professional charter dates from 1905, and 29 are now qualified. Saskatchewan recognized the craft as a profession in 1908, and there is a register of 23, and the Alberta institute, formed only two years ago, has 18 members. The total number of chartered accountants in Canada is, therefore, 369—an average one chartered accountant for every 20,000 of population throughout the Dominion. Ontario, as essentially the manufacturing province, has, as would be expected, a greater percentage, viz., one chartered accountant to every 14,700 of population. The United States with a population of some 92 millions, has only 1,040 certified public accountants, or an average of one for every 90,000 of population.

Chartered Accountants' Societies' Problems.

Three pressing problems before the chartered accountants of Canada are:—

(1) The question of interchange of membership.
(2) Uniformity of qualification and examinations.
(3) The best mode of professional education.

By interchange of membership, or, as it is sometimes called, reciprocal relations, is meant the eligibility, or perhaps the right of those who, having qualified in one province and going to reside in another, for admission to the register of chartered accountants in their new home without examination—that is, on proof of their membership in the province in which they formerly practised. Considerable progress has been made in the past year along these lines, and, although it has not yet been formally dealt with in the by-laws of all the seven provincial societies, there is little doubt from the understanding arrived at by the delegates during the convention last September that it may soon be un fait accompli. The institutes of British Columbia and Ontario have already placed it formally on record. As regards the incoming professional accountant, he receives at the hands of the Canadian institutes more liberal treatment than, perhaps, any other profession extends to its immigrant brethren. Members of the chartered institutes of Scotland and England have only to produce their diplomas, prove their integrity and state their intention to practise to be received into full membership. "If he is a good man we want him to join us" may be said to summarize the views of most members of the ruling councils.

Qualifications and Examinations.

Uniformity of qualification and examination is generally regarded as a concomitant question to the foregoing. If all the provincial institutes are to regard the certificates of others as equal to their own there must be, approximately at any rate, the same method of qualification. There is both the matter of what should be insisted on as practical experience and what grounds should be covered by examinations which, although they should be made as practical as examinations by their nature admit of, must principally test the theoretical knowledge. For example: The Montreal association requires a four years' apprenticeship, and they are considering the advisability of increasing this to five years, as required in England and Scotland. Ontario prescribes at least three years' service with a public accountant before sitting for the final examination. The British Columbia, Saskatchewan and Manitoba institutes require candidates to have had two years' experience with a chartered accountant, whereas Nova Scotia and Alberta have no such requirement. As regards the examinations themselves, some institutes require two and some three sets of examinations, and there has been considerable discussion as to acountancy subjects being covered by examination papers set by a central committee and to be used simultaneously by all institutes. This appears superficially to be sound, but would, it is generally thought, be unworkable. The difficulty of getting together busy practitioners (and the subject is one that by its nature should be handled by busy practitioners), scattered over the Dominion from Halifax to Vancouver, to meet, discuss and decide the proposed questions, or the impractibility of discussing adequately such a subject by correspondence, are probably insuperable difficulties.

The third of the active questions: The best mode of professional education (by which is meant the theoretical training not the examinations which test, but naturally do not give the theoretical training), is a very difficult one. The charters of the various institutes lay down that the object of the institute "is to promote and increase the knowledge, skill and proficiency of its members in all things relating to the profession of an accountant." The question is how best to do it. The standards of a few years ago will not do; the work is yearly becoming more technical and complex, and the public, too, are requiring a higher standard of ability. Closer affiliation with local universities is desirable, and in some quarters it is thought the universities should come closer to practical business life by having a faculty of commerce and granting degrees therein. The University of Manchester, England, has a faculty of commerce, and the University of Birmingham those of commerce, accounting and finance. Were all Canadian universities to have a commercial side arranged to harmonize with the various chartered accountants' institutes and students' societies, such matters would be on a good basis. A committee of the Ontario council, instructed to "consider the best method of educating young men for the profession of accountancy," has been collecting data and considering this important subject.

Which Form of Bank Audit.

The question of the desirability of the audit of banks has been much before the public, especially since the failure of the Farmers Bank and the subsequent disclosure of what had taken place. Granted that there should be an audit, the next question is as to its form. Should it be an audit by government inspectors or by public accountants? If one is guided by statements of the press, public opinion is in favor of the latter, and, their business bringing them closely into contact with banks, and having a broad commercial experience in addition to a life-long training in auditing, would seem to make chartered accountants peculiarly well qualified for the work. Probably their duties would be confined to the head offices, as from the nature of the organization of a Canadian bank, no branch, however ill-managed, could jeopardize the financial standing of a bank. Two banks have anticipated legislation, and have firms of accountants examine their head office books and records and sign their balance sheets. In Great Britain all banks registered under the Act of 1879 are obliged to have outside auditors, and this has been beneficial. The failures there in recent years have been those of money lending concerns, soi-disant banks, which were not doing a proper banking business and were not registered as banks. The remedy is that only registered banks should be allowed to use the name, as is the case in Canada.

High Standard and Responsibilities of Profession.

It has been said, "Happy is the country that has no history." We may say, "Happy is the profession that has not had to pass through tribulation to legal decisions." The Canadian Chartered Accountant in looking around for legal decisions to fix his responsibility and guide his ideals must look to England, and it may be said that he has voluntarily assumed the high standard enforced upon his professional brethren in the Old Country. Professional standards in this country are guided by leading decisions of the Court of Appeal, and when chartered accountants meet together to discuss standards of professional efficiency and practice it is the rulings of the Court of Appeal that are adopted as the standard, e.g., Verner vs. the General Investment Trust Company as to the obligation of companies to provide for depreciation in value of assets before paying dividends; Lee vs. Neuchatel Asphalt Company as to necessity of making good losses of capital; the London and General Bank case and the Kingston Cotton Mill case as to the liability of auditors for dividends paid out of capital.

Whilst the efficiency and zeal of Canadian Chartered Accountants is yearly increasing and more and more is being expected of them in the discharge of their duties, yet the onerous and responsible character of their work is not fully realized and appreciated here. Also, the law does not punish their errors of judgment as rigorously as in England. During the past year the Law Guarantee Trust and Accident Society of London having failed, the firm of accountants who were the auditors were mulcted no less than $100,000 by the court, and this for neither fraud nor incompetence, but merely for error of judgment, the court being "wise after the event." The auditors were held to have failed in not reporting to the shareholders on the valuations placed upon varied assets owned by the corporation. To decide what might be the worth of properties for which there was either no market at all or else a very limited one was a matter of extreme delicacy, and placed the auditors in a very difficult position, the more so as they were professional accountants and not professional valuators. On the other hand, an acton brought by a capitalist against a London firm of chartered accountants for negligence in having failed to discover frauds in stock sheets, resulting in the capitalist losing his money, was dismissed by the Lord Chief Justice and his decision upheld within the past twelve months by the Court of Appeal. The Lord Chief Justice stated: "It was not the duty of an auditor to take stock, but the plaintiff alleged that the stock sheets showed suspicious circumstances.

Proper Investigation of Accounts.

"It had been said that an auditor was not a detective; it was his duty to exercise what was reasonable care in the circumstances. The most that could be said was that he must make a reasonable and proper investigation of accounts and stock sheets, and if a reasonably prudent man would have concluded on that investigation that there was something wrong; it was his duty to call his employer's to the fact. In making his investigation he would be entitled to rely on documents vouched by servants of the business at whose accounts he was looking, unless there was some reason for believing those servants to be dishonest."

As has been stated, the work of the profession is becoming more technical in nature, and finance is becoming yearly of greater complexity. In order, therefore, to keep themselves abreast of the times it is essential that chartered accountants should have access to good professional libraries, both for reference and study. It is not sufficient that the students' societies should have libraries—and some have good ones—but the practitioner, to have the advantage of the experience of others in lines in which they have specialized and to do the best work, must be continually studying.

Work of Modern Practitioner.

When it is considered that a public accountant may be one day engaged on a municipal audit, on another putting in a cost account system in a large printing plant, and on a third engaged on a "merger," the far-reaching nature of the profession may be realized. It requires but one step further to realize that he must have every possible assistance. It is the existence of these facts and the realization that accountancy is a profession requiring the best that the best men can put into it that there lies the brightest hopes for the future.

From the above review of the organized activity of the profession it must be freely admitted that there is commendable activity in an endeavor to provide the business and financial community with properly qualified service, and to ensure continued improvement of standards of skill and competency.

WHAT AN ANNUAL STATEMENT SHOULD CONTAIN

Logical Arrangement Must be Observed—Obscurity Prevalent in Canadian Forms—Where the Dividends Are Noted

BY T. C. ALLUM.

No one who examines the annual statements, issued by Canadian concerns during the course of a year, with a view to making comparisons, can fail to observe considerable differences in the method of presenting these statements It would not be so surprising to find differences between the financial statements of concerns carrying on businesses of different natures but there would not seem to be a great deal of room for wide variation between those of firms carrying on exactly the same nature of business

Bearing in mind that the object of a financial statement should be to place before the shareholders or the public, generally, the exact position of the company at a certain date, it would not seem that there should be any great difficulty in presenting the various figures in such a manner as to accomplish this object. It will not be disputed, that in a large number of instances this is not done, and one could go so far as to say that in the majority of instances financial statements leave something to be desired.

The man on the street, referring to a financial statement, is disposed to remark that the company is trying to hide its profits or cover its losses The street is a strange mixture of credulity and incredulity, of folly and wisdom, but it is astonishing how often it is right. I know of many instances in which the financial statement said one thing and the street said something else, and the street was right. In such instances the statement was prepared, in all probability, with the deliberate intent of misleading Such statements must have been made by at least a large percentage of the concerns which go into liquidation each year, and a reference to the statements of the Canadian banks which have failed would probably show that nothing contained therein indicated approaching dissolution in the majority of instances.

It will never be possible to prevent the deliberate preparation of false statements and their presentation to and acceptance by the public But it may be possible to make it much more difficult to impose statements of this character upon the public. The most effective method of accomplishing this object probably lies in the direction of bringing about a greater degree of definiteness and clearness in the form of presentation. At present, statements which are issued by the best and most progressive houses are of such a wide variety and in many cases so ambiguous, that anyone desiring to adopt a form which would leave considerable leeway for the imagination and which would yet have the sanction of a good firm, need have little difficulty in finding one which would suit his purpose.

The public may not be able to make the necessary discrimination between statements representing different degrees of obscurity, but the situation will alter when comparisons between clear and obscure statements are made.

Prevailing Styles of Obscurity Shown.

As samples of obscurity in the financial statements of some of the best known concerns in the Dominion of Canada, I might instance the following:—

Various large industrial concerns, which for years were the recipients of bounties from government, made no statement of the sums received on this account in their annual reports, but included them as profits;

A large industry first shows its dividends paid and later shows the amount of rent paid.

Perhaps fifty per cent. of financial statements show somewhere near the top of the column the amount brought forward from the previous year, afterwards adding thereto the profits of the current year before making the necessary deductions;

Probably quite as large a proportion show, first, the dividends paid and afterwards make their appropriations for depreciation, etc.

These examples will be sufficient for the present purpose. Bearing in mind the object of a financial statement, no one will insist that any of the forms mentioned above are justifiable.

Take, for instance, the first group mentioned: How would it be possible for anyone, not knowing a firm was the recipient of a government bounty, to form a correct conclusion concerning that firm's earning capacity if the financial statement made no mention of bounties, but simply represented them as earnings? Such a statement is a misrepresentation and deserving of severe criticism. One would be justified in demanding that the receipts due to the action of the tariff, should also be specified, only it is impossible to estimate the amount of these. In other words, the statement should show the source of the receipts, insofar as these can be shown, in order that the reader may be able to judge of the permanency of these receipts and their likelihood of increasing, diminishing or ceasing altogether.

Earnings Are First Ascertained.

The rest of the statements critically referred to above, may not be open to the charge of incorrectly representing the situation of the company. But they represent it awkwardly. One has to sit down with a pencil to re-arrange and systematize the information contained in them.

One first looks at a statement to ascertain what the earnings of the current year were. First must be represented receipts due to the nature of the business. After this may be shown the costs of operation, divided into as many general headings as permissible. The total of these itemized costs is shown and is then deducted from the receipts of gross earnings. The remainder is the gross profits. Then should be shown, earnings from other sources which may be considered as regular and reasonably dependable. Then may be shown expenses of sale or management, the remainder being the net profits from operations.

All these items follow regularly and systematically, much as they would occur in the conduct of the business.

Then would be shown the bond interest and other fixed charges. This being deducted from the net profits from operations, would show the surplus or deficit for the year. This is probably what the shareholder has been looking for. It is also what the bondholder is looking for. Both are desirous of knowing what shape the company is in after all the charges have been met, which the company is obligated to pay during operations or on certain stated dates

Approved Form Shown by an Accountant.

In a highly approved form of annual statement shown by Arthur L. Dickinson, who is associated with the best firms of chartered accountants on this continent and abroad, I find that at this point he adds the "extraordinary profits," and to this adds the surplus of the previous year Then are deducted the extraordinary charges not applicable to the operation of the year meaning depreciation and last of all come the dividends.

At the moment, I cannot recall a single statement of late which shows last of all the dividends. Yet these are certainly the last charge to be made It is quite true that many appropriations are more or less optional and are gauged largely by the amount remaining to be carried forward after dividends are met. However, this does not seem the proper method of arriving at appropriations. These are for some definite purpose in the interest of the business. Depreciation cannot wait on dividends, nor is it easy to think of any other legitimate charge which can. Consequently, the logical place for these to be shown is before dividends are paid and not after.

The form of presenting annual statements should not require to vary greatly even between firms engaged in different lines of business and should show almost no variation between firms in the same line of business. It is a logical sequence of receipts, and expenditure of manufacture or operation; of expenses of sale or management as distinguished from manufacture; of fixed charges which have to be met in order that the business may be continued; of surplus for the year resulting from these considerations; of total surplus or deficit resulting from the year's surplus considered together with the surplus or deficit at the beginning of the year; or provisions made against charges not immediately pressing, but which are incidental to the business—such as depreciation—and finally of what is left for the shareholder to be disbursed in dividends.

Logically and in Order.

By showing these logically and in order, with totals and deductions in natural order of groups, the shareholder who knows anything at all of statements is placed in a position of assimilating with most ease the results of the year and present standing. At the same time, the shareholder is educated as to what he should expect from an annual statement and is thereby placed on his guard against concerns adopting ambiguous methods of presentation either through ignorance or design.

While I have referred to Mr. Dickinson's form of statement, in which surplus from the previous year is added to the surplus for the current year before depreciation and dividends are deducted, and while this is logical enough from one standpoint, it seems to me that all charges and appropriations made during the year should come out of the profits of the year and that where these are greater than the profits, a deficit should plainly be shown for that year. This would be impossible were the surplus from the previous year shown where Mr. Dickinson shows it. Because of this, it has seemed to me the surplus from the previous year should be shown at the very bottom of the statement and considered in relation to the results after all charges of the year had been dealt with.

◆

INTERESTING BANK AND FARMER INQUIRY

Farm Owners Able to Give Good Security—Situation in Canada—Loans on Security of Cattle

A schedule of questions was sent last year by Secretary Wilson of the United States Department of Agriculture, to 9,000 persons, 3,000 of them being country bankers, about the same number of prominent farmers, and also about the same number of country merchants and men of other occupations, taken from the list used by the bureau of statistics to collect monthly reports of prices of farm commodities.

The first effort of the inquiry was to ascertain the fraction of the farmers owning their land who are able to give good security or indorsed note for a loan. In the opinion of the correspondents 77 per cent. of the farm owners may be so regarded, and the corresponding percentage for tenants is 46 per cent. About 48 per cent. of the correspondents reported that farm owners were able to obtain such short-term loans, and the other correspondents reported that 36 per cent. of the farm owners in their communities were unable to do so.

Long Time Loans and Farmers.

A similar question pertaining to long-time loans brought reports from 47 per cent. of the correspondents that farm owners were able to obtain such loans, and the remaining correspondents reported that 40 per cent. of the farm owners were unable to do so. The corresponding percentages for tenants are nearly the same.

Correspondents were asked what percentage of the farmers owning their land who raised cotton placed a lien on the growing crop to secure advances or supplies. Of correspondents, 7 per cent. reported that no farm owners placed liens on the cotton crop. The remaining correspondents reported that 42 per cent. of the farm owners did so, and that 52 per cent. of them did so ten years ago. The decline in percentage is 10 per cent. absolutely, or about 20 per cent. relatively.

It was ascertained that of the principal sources of agricultural loans and advancements (not including purchase money), local banks supply 57 per cent. of the total agricultural credit in communities where banks exist; neighbor supply 16 per cent. in communities where they contribute anything to the supply of credit; individual lenders in near by cities and towns supply 12 per cent. in communitie where any supply of credit is derived from them; loan agent for outside capital supply 16 per cent. in communities wher such loan agencies exist; local general stores supply 25 pe cent. in communities where they contribute anything to th supply of credit and unclassified sources of credit supply 1 per cent. in the communities where these undescribed source of supply exist.

Farmers Lending to Farmers.

It was requested of correspondents to state what percentage, in their opinion, of the farmers known by them an to them would be willing to form an association to receiv their own deposits for loaning to themselves; and also t borrow from the outside on the combined security of th property of all members money to loan to themselves.

Of the correspondents, 32 per cent. reported that ther were no farmers known by them or to them who would b willing to form such an association, but the remainder c the correspondents reported that about 40 per cent. of th farmers stood ready to organize such co-operative associations.

Commercial and Land Banking.

In Canada, unlike Australia, New Zealand, and Grea Britain, commercial banking and land banking are absolutel separate. A commercial bank in Canada is not allowed t lend money on the security of land. The man who has s cured the patent for his homestead in Saskatchewan c Alberta and gets his first small loan from a mortgage con pany at 8 per cent. may think that rate high because som one may be borrowing money elsewhere at 5 or 6 per cen As a matter of fact the farmer similarly situated anywher else in North America never got his money at anything lik that rate. Very much higher rates were paid in the Wester States when they were in the same stage of developmen As conditions become more settled rates will go down, they have done in Manitoba, where 6 to 7 per cent. is th average rate.

Loans on Cattle.

Sir Edmund Walker recently stated that he was favor of the banks having power to loan money to farme for the purpose of enabling them to purchase cattle and into mixed farming, the cattle themselves being given security.

It is desirable, he said, that the farmers of the We should be induced to go into mixed farming, and anythi that will help to bring this about is deserving of favora consideration. The chief objection to it would be that other creditors, such as the storekeeper and the impleme man, did not know that a man's cattle were pledged to t bank they might say that they extended credit to the farm believing that they had the cattle to fall back upon. Howev these creditors would have to take trouble to inform the selves as to the man's position, and govern themselves cordingly. If it is considered desirable for the benfiet of t country generally that farmers should have loans on the s curity of their cattle he saw no reason why parliament shou not legislate accordingly.

CANADA'S NEW BANK ACT

The revision of the Canadian Bank Act, now in progres illustrates in an illuminating way the distinct common sen that has been shown by Canada in dealing with her banki problems. Instead of strenuously resisting banking leg lation, as has been the practice in the United States, Ca dian bankers adopted the plan of recognizing it as a norm and necessary incident of their existence. The Canadi Bank Act, therefore, provided for regular revision at the of each decennial period. Changes to be expected in leg lation on such occasions are usually not numerous, but t opportunity ensures discussion and rectification of any s ious defects in existing conditions that may have come light during the period since last revision of the law.—N York Journal of Commerce.

SECURITIES MARKET IN NINETEEN-TWELVE

igh Money Rates Checked Bull Trading—Rising Cost of Living Increased—Demand for Five, Six and Seven Per Cent. Investments

BY T. GALBRAITH.

The movements in the better class of investment securties, as the past year advanced, were towards a lower level f prices. In consequence, they received more than the sual amount of attention. The flotations of municipal and ndustrial bonds and preferred stocks were very large during he year. These really, or the bulk of them, were rendered ecessary owing to the activity and expansion of trade and ndustry in the Dominion Applications for the incorporation f new companies and for additional capital in established oncerns, ran to about four thousand in the twelve months. This is an unusually large number, and as previously inmated, a great share of them were imperative owing to the act that the wants of trade could not otherwise be supplied.

New capital and extra labor were demanded on all sides. nd although new capital became scarcer in the closing onths of 1912, I think it safe to say that there was even ore difficulty in obtaining labor. The merging of different roperties was also a feature. There has been, and is, keen ompetition in the various departments of finance and trade. he aim of the amalgamations was a reduction in costs. The ndustrial and commercial activity of the country is absorbing ore and more capital, and the rates of interest consequently dvance. The effect of such conditions in a country like ours, here development is in its infancy and where money is not oo plentiful, is naturally a bearish factor with respect to nstruments of credit.

unds Were Scarce.

In the early autumn, when provision had to be made by e banks for the movements of grain to market, the purse rings began to tighten. Brokers could get very little oney on stock collateral. They appealed to the private nders, and partly owing to funds borrowed in this way were e calls from the banks responded to. There had been a ood deal of activity in stocks in the months of May and ine, as well as in October. Much of it was of a speculative aracter, but that was well nigh eliminated before October as over. Brokers were paying 6½ per cent. for loans, and eir clients 7 per cent. No bull campaign in securities could e carried on at those rates.

vestment Buying Was a Feature.

The buying of stocks for investment was more of a ature last year than in any previous year. This was simply ue to the fact that there were more investors. They had ade money in general business, and part of the profits, at ast, were invested in securities. There was also a good deal turning over from one security to another. The higher ost of living had a bearing on the stock markets. The inomes of many people had to be increased to keep up with e pace. A yield of 3 to 4½ per cent. was insufficient for is purpose, and these people had to resort to issues which ould yield from 5 to 6, and even 7 per cent. A good deal caution has recently been displayed in the purchase of curities. Except at brief intervals, when there happened be a temporary easy money market, there was no wild or cited buying. The rates of interest on money, next to the fety of the loan, depend upon supply and demand. And e cost of money has an inherent influence on securities. uring the past year, as everyone having any knowledge of siness knows, the demand for funds was abnormally large aturally, the dearer money market had a depreciating inuence on the values of securities. Money rose fully 1 per nt. in 1912, and at the advanced rate (6½ per cent.) could ot be obtained by everybody, although the collateral was rst-class.

nks Put to the Test.

The banking system of the country was put to a severer st than ever before, and on the whole acquitted itself well. he greater development and expansion of the West, and the mense increase in the output of manufacturing establishents in the East, necessitated the use of very large amounts new capital. A good idea of the expansion of business in anada may be had by a comparison of the current loans th those of a year ago. These loans of our banks at the d of October reached nearly $880,000,000, or an increase about $112,000,000 in twelve months. During the same riod the deposits had grown from $918,500,000 to ,024,000,000, or an increase of $105,500,000. The paid-up pital of the banks had, of course, to be augmented, and out $8,000,000 new bank securities were floated. This ought the aggregate paid-up capital to over $114,000,000. But, while this additional capital was necessary in the interests of commerce, the number of banking institutions have been diminished through amalgamations and absorptions. Owing to the profitable business in banking this year the new issues were readily taken up, the market for these shares being good. The full prices of the year were not maintained in all cases, but this could hardly be expected with a stringent money market. Instead of increasing dividends, a number of the banks declared bonuses in addition to their regular disbursements. For instance, the Bank of Montreal paid a 2 per cent. bonus, making 12 per cent. for the year; Commerce gave an additional 1 per cent., making 11 per cent. for the year; Toronto also gave 1 per cent. bonus, making 12 per cent.; and Dominion Bank paid 2 additional, making 14 per cent. for the year.

Credit Was Not Impaired.

In the last half of the year there was depreciation in the values of choice investments, such as municipal and industrial bonds and debentures. Owing to these conditions the credit of the country was attacked by portions of the press, and they went as far as to say that there had been much overtrading in land, and too great an expansion in business. This criticism, however, did no harm, but, on the contrary, was beneficial. True, the market became congested occasionally through a surfeit of flotations and a lack of capital; but security values weakened not through any impairment of credit. The capital requirements of Canada, with regard to commerce and industry, are greater than at any former period, and it was quite natural that prices of securities failed to hold when the yield from them was under 5 per cent., whereas money commanded 6 to 7 per cent.

One reason for the greater stringency in money here was that a great improvement in general trade had sprung up in the United States. For two years there had been a lull in commerce over there. Increased activity meant a better demand for money, and consequently higher rates. This precluded the purchase of Canadian securities by them, and prevented many issues from being sent by us to Wall Street to be carried there—quite a usual occurrence when money ruled lower there than in Canada.

Unsettling Influence of War

The Balkan War, with its unsettling influence in finance, was also disastrous to securities the world over. The interest rates in European centres rose 1 to 1½ per cent. in the autumn. Liquidation of all available loans followed, and London and New York were forced to take over immense quantities of home and foreign securities. Under the circumstances its was quite reasonable to understand that new issues could not be considered. The minimum rate of the Bank of England began to rise much earlier in 1912 than in 1911. On August 29th last the rate was advanced from 3 to 4 per cent., while in the previous year it was September 21st before the rate was advanced from 3 to 4 per cent. On October 17th last year the rate was put up to 5 per cent., at which it continued, whereas in 1911 the rate was not raised above 4 per cent.

Fairly Good Year Recorded.

The stockbrokers had a fairly good year, with business aggregating more than in 1911. Speculation, however, was almost eliminated in the closing months, owing to the difficulty in obtaining loans. The investment orders were quite liberal throughout the year, and in many cases some very profitable operations were carried on. A number of Canadian industries will require additional capital almost immediately, but no attempt will be made at financing them until money markets return to normal conditions. Appreciation in values in a number of instances was very great up to September, but subsequent liquidation resulted in declines. In spite of recessions, however, prices generally were higher than at the end of 1911.

MONEY MARKETS THIS YEAR

emand for Funds Will be Active, it is Predicted, and Bank Rates Higher Than for Five Years

Throughout 1913 the demand for money will be active.

Bank rates will be higher than in any year since 1907.

The Bank of England rate will show an average for the year of more than 4 per cent.

These are the predictions of Mr. Joseph Davies, of Mr. P. Hailey, editors of the Business Prospects Year Book, st received by The Monetary Times.

To the man in the street, they say, and even to many mmercial men of wide experience, nothing is more obscure an the movement of money. Every one understands with me degree of clearness the causes that bring about a se and fall in provisions, in coal, in iron or steel, or in her articles of merchandise. But it is more difficult to llow why at one time bankers are willing to lend you money 2½ per cent. to 3 per cent., whilst in the course of a few onths they demand on equally good security 4½ per cent. 5 per cent.

As a matter of fact, the causes that raise or lower the nk rate are exactly the same as those that from time to ne vary the prices of merchandise. Money is a commodity, d is subject to the laws of supply and demand. But both the supply of and the demand for money, there are special ctors that do not obtain in other sections of industry. on ore, copper or lead mines all pass through periods when mbers of them are actually shut down or largely reduce eir rate of output, owing to the lack of demand and the nsequent low prices. The production of cereals and of tton is in all countries dependent on weather conditions, t the supply of gold is neither affected by climatic changes r by booms or depressions in industry. So long as gold n be produced, there is an ever ready market for it at one andard of price; and except for such convulsions as the cent war in the Transvaal, or some great strike or lock- t in one or other of the gold-mining districts, there is no t of circumstances to bring about a reduction in the nual output of gold.

On the side of demand, money is also affected by con- tions that do not apply to other commodities. It is far ore sensitive in its movements, and whilst those movements e in the main controlled by the condition of industry, they e also specially subject to political uncertainties.

dustry and the Demand for Money.

The effect of industry on the money market can be oadly divided into, firstly, the demand for money for circu- ion, and secondly, the money used for bank reserves. ese two divisions interconnect, and their influence on the oney market is regulated by the same causes. As wages roughout the world are paid in cash, with any improvement trade and industry the volume of money in circulation ad- nces by leaps and bounds. When production, manufacture d transport are in full swing workmen secure both regular ployment and increased wage rates. Thus at the end of e week each worker finds more money in his pocket, as stly, he has worked a greater number of days, and secondly, e daily rate of pay is higher. When this is applied to tens millions of workers, it will be at once seen that the effect the withdrawal of money from the banking centres is very eat.

The call on the part of the banks and financial houses money is controlled by exactly the same causes. Bankers all parts of the world follow a principle of retaining a sh reserve bearing a certain proportion to their liabilities. ese liabilities automatically rise or fall, in accordance h trade conditions. When trade is bad, new developments e at a minimum and prices are low. As trade improves e amount of money engaged advances, not only on the in- ased volume of the commodities negotiated, but also from e rising prices that invariably accompany improving trade

ade and Credit.

The trade of the world is carried on on credit, and as s credit advances in total, bankers must either obtain more ld or must gradually see the proportion that their reserves ar to the total amount of credit sink. As this proportion proaches the figure they regard as the minimum of safety, nkers show more and more hesitation in making advances. hesitation that is expressed in the form of rising bank es.

The gigantic variations in the financial needs of trade re well exemplified in the three years 1905, 1907, and 1908 the first of these trade was inactive; in 1907 every industrial untry was passing through a trade boom, and this was followed by a sharp reaction which made 1908 a year of exceptional depression.

VALUE OF THE IMPORTS AND EXPORTS OF THE PRINCIPAL COUNTRIES.

	Imports and Exports.		
Country.	1905.	1907.	1908.
United Kingdom .	£973,000,000	£1,164,000,000	£1,050,000,000
U. S. A.	544,000,000	685,000,000	631,000,000
Germany	632,000,000	767,000,000	692,000,000
France	386,000,000	473,000,000	428,000,000
Belgium	216,000,000	265,000,000	233,000,000
Russia	181,000,000	200,000,000	201,000,000
Spain	84,000,000	80,000,000	82,000,000
Italy	152,000,000	193,000,000	186,000,000
Total	£3,168,000,000	£3,827,000,000	£3,503,000,000

Trade and the Bank Rate.

Thus the external commerce of the countries named demanded in 1907 659 millions sterling more for its financing than in 1905, whilst in 1908 the amount required fell to 324 millions. The effect of these changes on the money market as shown in the Bank of England rate was:—

	Imports and Exports Million £.	Average Bank of England Rate.		
		£	s.	d.
1905	3,090	3	0	2
1907	3,735	4	18	6
1908	3,423	3	0	3

These great differences in the money value represented in international commerce arise partly from the increase or decrease in the volume of the merchandise exchanged, and partly from the rise or fall of prices.

Act as an Index.

A good instance of this may be found in the figures of the coal exports from the United Kingdom in 1905 and in 1907. In 1905, the exports totalled 47½ million tons at a value of £25,000,000. In 1907, the year of the last great trade boom, the quantity of coal exported was 63½ million tons, at a value of £40,000,000. Of the increased value of £15,000,000 eight and a half millions was due to the additional quantity exported, and six and a half millions to the rise in coal prices.

The figures given of the external trade of the leading countries are an index to a similar movement in the home markets.

This improvement in demand and rise in price for raw material and for manufactures, is also accompanied by intense activity in all sections of transport. Railways are working at top speed, and securing large increases in revenue. Shipping is fully employed, and at higher freights. An additional factor during these periods of great activity, is that those in control of trade and commerce are tempted by the high prices, and exceptional profits, to enter into new schemes of extending works, mines and means of transport.

Thus as trade improves, all these movements tend in one direction. More money is needed to finance the world's international trade, owing to high prices and increased volume, and simultaneously huge sums are asked for to expend as capital in providing for new developments.

Industrial Demand for Money This Year.

Following 1907, a severe reaction in all the industrial countries was experienced. The value of the combined imports and exports of the leading countries in 1907 and in the years following are as follow:—

Imports and exports of the four chief industrial nations for each year.

1907 to 1912. In millions of £.

Nation.	1907.	1908.	1909.	1910.	1911.	1912.*

*1912 figures estimated on the basis of the returns of first eight months.

From the above table it will be seen that following 1908 there has been a consistent improvement, the present year establishing a new high-water mark.

D. von CRAMER
Managing Director

It is evident the top has not yet been reached. Works are ooked forward for months ahead, and the prices of comaodities in 1913 promise to average figures higher than in any ear since 1900, and possibly higher than in any year since the ranco-Prussian War. With the volume of production at its aaximum, and with prices at exceptionally high figures, it s certain that the demand for money for carrying on the orld's commerce in 1913 will establish a new record.

An important factor in the international money position s the trade condition of the United States. In Europe trade as steadily improved since the autumn of 1909, and as been in a highly satisfactory condition throughout 1911 nd 1912, but during the whole of that period the United tates still continued in the depths of depression. Within ae last few months a sharp transition has taken place, and t the present time industry in the United States is just as ctive as in the manufacturing countries of Europe, whilst ll the facts available point to this state of affairs continuing nd in fact being accentuated over the whole of next year.

nternational Politics in the Money Market.

In a year like 1913 the effect of any political movement aort of a war between two great powers will in its effect on ae money market be of minor importance compared to the onormal demands of trade and commerce. At the moment of riting Europe is faced with troubles in the near East. If aese unfortunately develop into war, it must have the effect accentuating the firmness in the money market which will e brought about by the commercial movements. But even peace be maintained throughout the year, the demand for oney must still be so great as to keep rates at a figure conderable above the average.

The average Bank of England rate during the last velve years has been as follows:—

	£	s.	d.		£	s.	d.
1900	3	19	2	1906	4	5	4
1901	3	14	5	1907	4	18	6
1902	3	6	7	1908	3	0	3
1903	3	15	0	1909	3	2	1
1904	3	5	10	1910	3	14	6
1905	3	0	2	1911	3	9	4

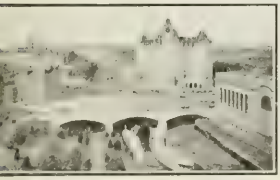
The year 1913 in all its conditions promises to compare th such years as 1900 and 1907, and the bank rate should oproximate to the rates obtained in those years.

FINANCE IN PARLIAMENT

verage Member is Not Well Posted—Coming Session is Likely to Bristle With Financial Questions

BY T. W. KING.

We have had no financial question in Canadian politics ich elicited popular interest as did the "greenback" estion and the "free silver" question, in the United States. Hence, the ordinary member of parliament comes to Ottawa quite prepared to admit that he does not know a great deal about finance. Occasionally the chartering of a new bank or some other proposed legislation will engage the attention of the banking and commerce committee, but the dission is seldom carried from the committee to the floor of e House. There was some debate upon the remedial atute deciding a troublesome question of interpretation of e original act creating one of our leading life insurance mpanies, but as a rule any private bill reported from the nking and commerce committee goes through the House opposed and unquestioned. Even the revision of the inrance act elicited but languid interest and desultory dission in the green chamber.



CANADA'S CAPITAL.

The coming session of parliament will be distinguished a discussion of financial questions by private members precedented in the recent history of Canada. The new bank , whether good, bad or indifferent, will not go through comttee or through parliament without many amendments ing suggested of which a number will be insisted upon hemently. The failure of the Farmers Bank will be a text r many Ontario members, and one has only to read the rliamentary debates of the past upon this subject to surse that some extraordinary panaceas will be suggested for e prevention of similar casualties in the future.

Then again we will find a number of members convinced that in some way money can be made more plentiful by act of parliament. Just what suggestions this conviction may prompt remains to be seen.

Looking over the pages of Hansard for years past, one will be struck by the fact that the question of government issue of paper money—generally a pretty live question in other countries—has not attracted the attention of parliament. It is doubtful if one member out of ten in the past paid any attention to Dominion notes, or realized how radically they differed in nature and origin from the bank bills which make up the larger part of our currency in daily use. In the past, private members have not bothered themselves about the financial question, but it would not be surprising in the near future to find a great change in this regard.

The Finance Minister as a rule (and this will apply to Mr. White), is treated by Opposition members of the House with considerable deference. His department has no patronage to speak of, and it deals with subject matters of a highly technical nature. The credit of a nation, like the credit of an individual, is so much a matter of honor that parliament has given the Finance Minister a free hand in dealing with the placing of loans, the refunding of debentures, and etc. The financial critic, whoever he may be, will, of course, find fault with the Budget, but unless tariff changes are involved the Budget speech is listened to with respectful interest by the House, and the formal motion to go into Ways and Means usually carries without much debate. The Hon. Mr. Fielding, as Finance Minister, had a remarkable gift for lucid statement, and it was a real pleasure to hear him deliver a Budget speech. So well would he have his matter arranged and digested that reporters in the press gallery could make a running report with even the main figures included. No less remarkable in its way was the speech of Hon. George E. Foster, in the answer which always followed immediately. With scarcely a note, this financial critic would discuss and analyze the exhaustive Budget speech with all its array of figures, dates and statistics. But after Fielding and Foster were through, the Budget debate seldom proceeded to any length unless tariff changes were involved.

The tariff question is naturally a part of the fiscal or financial question generally, and it is one upon which the private member is more at home. Many a back bencher is a shrewd business man who knows more about practical workings of certain tariff schedules than do the experts of the Finance Department. A tariff bill seldom goes through the House without many amendments being quickly made by the government upon representations by private members on both sides of the House.

Indeed, as a rule, in discussing finance, members of parliament are not inclined to be partisan, and there will be some interesting divisions in committee, and possibly in the House, before the revision of the Bank Act is completed. Still, it will be found that the House will be greatly influenced by the advice of the Finance Department, and of the Finance Minister, upon all subjects relating to the national credit and to national finance.

JAILS ARE NOT BUSY.

Luckily, Canada's criminal population is comparatively small. This is largely because the standard of living is good, labor and prosperity are plentiful. According to the latest annual report of penitentiaries the average daily population in Canada was shown to have been 1,853 last year, as compared with 1,834 in the year previous.

The actual population at the end of the fiscal year was 1,895, divided as follows:—

Kingston, Ontario, Penitentiary, 494; St. Vincent de Paul, Quebec, 442; Dorchester, New Brunswick, 220; Manitoba, 183; British Columbia, 331; Alberta, 167; Saskatchewan, 58.

The parole system works admirably, according to the Dominion parole officer. Since the act was passed, 3,730 sentences have been completed on parole, of this number only 237 may be characterized as delinquents. The percentage of failures is 5.17. Last year 848 prisoners were thus released.

To the penitentiary population of the year, Montreal contributed the most and Ottawa the fewest. The figures from the principal centres are: Montreal, 293; Vancouver, 174; Winnipeg, 14; Toronto, 96; Quebec, 51; Victoria, 42; Edmonton, 39; Hamilton, 35; Sydney, 34; Halifax, 33; Calgary, 31; New Westminster, 27; Regina, 21; Ottawa, 10.

By creeds the penitentiary population comprises 934 Catholics, 925 Protestants, 36 Hebrews, and 36 Buddhists. The total cost of maintenance was $565,472, or 84 cents per head per day.

The Canadian Bank of Commerce

HEAD OFFICE, TORONTO

Paid-Up Capital, $15,000,000 Rest, $12,500,000

BOARD OF DIRECTORS

SIR EDMUND WALKER, C.V.O., LL.D., D.C.L., President.

G. F. GALT, ESQ.
ALEX. LAIRD, ESQ.
W. FARWELL, ESQ., D.C.L.
GARDNER STEVENS, ESQ.
G. G. FOSTER, ESQ., K.C.
CHAS. COLBY, ESQ., M.A., Ph.D.

A. C. FLUMERFELT, ESQ.

It will be interesting to note, by the comparison below of the principal items of the Balance Sheet at the present day with the figures of twenty-five years ago, the remarkable growth of The Canadian Bank of Commerce during the past quarter of a century.

	1887	1912
Paid-Up Capital	$ 6,000,000	$15,000,000
Reserve Fund	1,600,000	12,500,000
Notes in Circulation	2,669,000	16,422,000
Deposits	10,799,000	197,617,000
Assets	21,946,000	246,571,000

The Bank has now 365 branches which are geographically distributed as follows:

Alberta	49
British Columbia	42
Manitoba	23
New Brunswick	4
Nova Scotia	13
Ontario	79
Prince Edward Island	5
Quebec	88

Saskatchewan	53
Yukon	2
Total in Canada	358
Newfoundland	1
London, Eng.	1
United States and Mexico	5
Total number of branches	365

It is thus very fully equipped to transact every description of banking business throughout Canada.

IMPROVING TRADING CONDITIONS

Canadian Credit Men's Association Continued Good Work Last Year—Specimen Reports

The Canadian Credit Men's Association, which was organized in Winnipeg three years ago, has now passed the experimental stage, and is firmly established with seven different offices in full operation, extending from St. John, N.B., to Vancouver, B.C. The Toronto branch was organized just a year ago, 89 members being on the roll at the time the office was opened. Since that time 28 of these members have been transferred to Eastern offices, which have been opened later, leaving 61 of the original members still with the Toronto branch. The present membership of this branch has grown to 175 and within the next six months by the same steady, permanent growth, will easily reach 250.

This association is composed exclusively of manufacturers and jobbers who have found that it works to their mutual advantage to co-operate freely with each other in an effort to support the deserving and thoroughly honest retailers, and at the same time to entirely eliminate the weak and fraudulent accounts. Formerly it was the practice where a wholesaler got stuck with a bad account to unload that account on some competitor at the first opportunity. Now, the wholesalers, by standing shoulder to shoulder and freely exchanging information in regard to their accounts, through the medium of the Credit Men's Association, are rapidly weeding out the undesirable accounts and at the same time are strengthening and supporting the desirable ones.

Some of the Good Work.

The association is engaged in numerous activities, which are bound to result to the general benefit of the trade, such, for instance, as educating the retailer to carry more and better fire insurance, to furnish more complete financial statements to their supply houses; to prosecute cases of fraudulent failure; to unite in carrying deserving debtors, who through some misfortune may have gotten into deep water; to secure the passage of better commercial legislation, that shall be so definitely worded as not to prevent of the many evasions of the spirit of the law, which in many cases are now possible.

This association is not working in opposition to any class of trade, but is in absolute harmony with such organizations as the Retail Merchants' Association, the Canadian Manufacturers' Association, the Grocers' Guild, and others. Each member joining the association becomes the owner of one share of the capital stock of the association, which is a limited liability company, with a Dominion charter, so that all members have an equal voice in the operation of the association. Each member signs a contract agreeing to exchange, through the medium of the association's offices, his ledger information on any account that may be inquired for, so that in return for furnishing his figures on any customer he receives the figures of ten, twenty, thirty, fifty, sometimes a hundred other members of the association who may be selling to the same customer. In this way a clear history of the account is secured. In many cases this has resulted in the preventing of fraud, in the supporting of weak accounts, and in the saving of actual loss to members of the association.

How Assignments are Handled.

Assignments are handled by the association with the greatest possible efficiency and at the least possible expense. Where a debtor is in deep water, the supply houses are able to get together with him, and arrive at some arrangement that is fair and equitable to all. Many honest retailers have been carried over a period of depression and kept on their feet through the activities of the association, where otherwise they would have been obliged to assign, with a definite loss to themselves, and to the houses that had furnished them credit.

Two Actual Reports.

The accompanying cuts show two actual reports issued by the association.

The longer report refers to a dealer who has no credit rating. He ordered $1,800 worth of goods in Montreal, and the wholesaler after receiving this report filled his order. The smaller report refers to a dealer who ordered $150 in Toronto, but the order was cancelled after this trade report was received. Later, two other firms, not members of the association, shipped him goods, one for $40, and the other for $100. Shortly after, the dealer assigned and none of the creditors have received a dollar, so that this one report saved $150 for one wholesale firm, and might have saved $14 to the other two firms had they been members of the association, as they now are.

The prospects for 1913 are very bright. The association will be a powerful factor in improving trade conditions throughout the entire country.

BANKERS' BUSINESS GUIDE

Review of the Situation at Home and Abroad—Business Prospects of the Current Year

Throughout 1913, industries generally will be working with activity, and the year will constitute one of those periods when demand will be in excess of supply, prices of practically all commodities will be at high figures, wages will be good, unemployment will be at a minimum, and exceptional profits will be made by industrial undertakings. These are the predictions of the old country prophets of the world's business prospects, Mr. J. Davies and Mr. C. P. Haley.

Of the coal industry, they note the following conditions for 1913:—

1. A shortage of coal stocks unequalled in recent times.

2. All coal-consuming industries enjoying intense activity, with a resultant record demand for coal.

3. Conditions at the collieries which render it impossible to secure more than a normal increase in the output from the European coal fields.

The conclusions drawn from this analysis of the various factors bearing on coal profits in 1913, are that although prices are now above the average, a further rise will take place, and throughout this year the consumption of coal will absorb all that the European coalfields can produce; wages will be at top figures, and profits will be exceptionally good.

As to the Iron Industry.

Weighing the facts and figures available as to the consumption and production of iron in 1913 appears to show a position so strong that it is not only better than any recent years, but is even more promising than such years as 1906 and 1907. The forecast of the iron and steel trade for the current year is:

Furnaces and works will find full employment throughout the year.

Prices will touch the best figures and the average price of the year will be the highest since 1900 and possibly since the Franco-Prussian War.

Capital invested in all sections of the iron and steel industry will earn exceptional profits.

There does not appear much prospect of any substantial increase in the production of tin in 1913 and there is every indication of that year being an extremely busy one in which tin using countries will all be calling for additional supples. With stocks already at a low figure, tin prices are bound to remain high throughout the forthcoming twelve monhts, and it is probable that the average for the year will be in excess of any year for the past thirty years.

With the present demand for tinplate absorbing all available supply of the mills working at nearly their full capacity in the two principal producing countries, the absence of stocks, no prospect of a large increase in output in 1913, and the assurance of a great demand in Europe and North and South America well into 1913 consequent upon exceptional industrial activity, leads to the inevitable conclusion that demand in 1913 will exceed supply, prices will rise and investments in tinplate, steel sheet and kindred undertakings will show a high return.

Oil and Copper Outlook.

The supply of oil is not likely to show a big increase in the near future. With excellent trade all round in 1913, the demand for oil will increase. The biggest increase may be looked for in the demand for motor spirit and lubricating oil, while the inquiry for kerosene will probably show a decrease, especially in Europe.

The demand for gas oil will show a normal increase, while the heavy oils will probably be in greater request owing to the rapid development of the Diesel engine. Prices, therefore, may be expected to be high, and well above the average of the last few years.

With the demand for copper exceeding the supply, and but little relief to be afforded from existing stocks, prices are bound to move upwards, and it is quite possible that during the forthcoming twelve months there will be a squeeze in copper, which will bring it to prices higher than anything previously touched. The prospects of the industry for the forthcoming twelve months are high prices with a strong probability that the average for the year will be the highest for the last thirty years.

Outlook for Shipping.

The position at present seems to be that new tonnage is being placed upon the water at the rate of between 200,000 and 300,000 tons per month, and if this tremendous output of new tonnage is to find employment without bringing down the present high rates of freight, the carrying trade of the world must expand during the next twelve months to the extent of some 20,000,000 to 25,000,000 tons of additional cargo, over and above the total cargo carried in July and August of the past year. This state of affairs means that from August 31st to December 31st, 1912, some 1,000,000 tons of new shipping will be placed upon the water, and each month as it passes will add a still further quantity.

Although there are still indications of an increased tonnage requiring to be carried for many months to come, this increase does not appear to be of such dimensions as to exceed the large tonnage capacity which is now being placed on the water, and it cannot be long before the supply of shipping will overtake the demand. It thus appears as though the high freights which are now ruling are nearing their end, and it is probable that the first months of 1913 will see the commencement of the downward movement in freights which will become more accentuated as the year progresses. The whole twelve months, however, should be a good one for shipping, but will not be so prosperous for shipowners as the year 1912.

Analysis of the Wheat Position.

Though production has been ample, the requirement of the world is also on a large scale. Particularly during the closing months of 1912, there was a heavy drain by Europe generally on available supplies of dry, millable wheat. Prices will be well maintained, even apart from any interruption to supplies from the Black Sea. As our estimates, based always on present prospects, which are good, show a probable requirement over the twelve months of 2½ million quarters beyond the surpluses able to be spared by America, Russia, etc., from their own stocks, a tendency to rise as the season advances is to be expected.

There will be no plethora, and if anything untoward should happen to the crops still at risk we must expect higher prices up to June and July next. About 40s. per qr. c.i.f. has already been paid for new crop, Australian to arrive about April next and on the facts before us this does not seem too high for a basis for spring engagements.

Big Demands for Rubber.

The output of plantation rubber is increasing enormously, and during 1913 many of the plantations which were the outcome of the boom of 1910 will begin to yield rubber, as it will be remembered that it takes some years for a rubber tree to grow a sufficient size to yield rubber. Hence a fairly big increase in the supply of plantation rubber can be confidently expected. On the other hand, the supplies of wild rubber have remained stationary during the past few years, and show signs of decreasing in the near future. Any decrease from this source in 1913 will probably be more than counterbalanced by the increase of plantation rubber. Hence a fair increase in supplies may be looked for during 1913.

The motor-car industry is in an active state, and bids fair to remain so during the greater part of 1913. With active trade all round, the year is likely to be one of great demand, with better prices ruling during the first half of the year, with a tendency to fall during the closing months.

Supply and Demand.

The demand for cotton manufactures will be healthy and equal to the past year. The increase in the supply of cotton will be balanced by the larger consumption. The price of cotton will be on about the same level as in the preceding year.

Employment in all sections of manufacture will be consistently good. The profits of manufacturers will be satisfactory, and spinners should do better than for two or three years back.

◆

The world's markets are always open to supply, and food products are continually going up, so that, when you come to think of the millions of acres of unutilized of a few years ago which to-day are utilized to a larger or smaller extent, and their products are able to be transported to market over well-arranged and thoroughly managed lines of transport, you get at the idea that I want to impress upon myself and upon you—that the borrowings for which Canada is liable are borrowings which have been made on the minimum of her values; and, in proportion as she grows and develops, the minimum of values is gradually going up, and will do so until it reaches what may be a fair average value for productive lands as compared with the other productive areas of the world, and so your 50-cent lands and your dollar-an-acre lands are now saleable for $15, $20 and $25, or $30 or $50 per acre.—Hon. George E. Foster.

◆

From eleven acres of his farm near Moose Jaw, Mr. H. J. Clark threshed last year 836 bushels of Marquis wheat, or an average of 76 bushels to the acre. This is thought to be a world's record for wheat grown for commercial purposes.

ARE WE DRIFTING INTO SOCIALISM?

Within the Existing Framework of Society we Must Combine Private Initiative and Private Energy with Social Control and Social Justice

BY PROFESSOR O. D. SKELTON

Manifest destiny, as our United States cousins term it, or the Zeitgeist, in the German phrase, is difficult to resist. Most of us swim with the stream. Not merely motives of personal expediency, but a fatalism bred partly by the overshadowing hugeness of our continental areas, of our seven-million or ninety-million democracies, and partly by hazy ideas of impersonal and irresistible forces of evolution at work, impel us with the majority. Once the conviction gains ground that widespread and powerful tendencies are making for the triumph of a party or a principle, resistance is half paralyzed. Whatever is to be, will be right. On the subject of socialism, for example, many people are shifting their attitude from a conviction, not of its justice or expediency, but of its inevitability. Are we drifting inevitably into socialism?

We must be clear as to what we mean by socialism. It may, as I have maintained elsewhere, be defined as the opposite of that system of private property and competition which Socialists label Capitalism. It is at once an indictment of capitalism, an analysis of it, a substitute for it, a campaign against it. More positively, the aim of socialism may be said to be the organization of industry in the interest of the masses of the people, and its method, collective ownership of all instruments of production and collective distribution of the product. A comprehensive answer to the question set would involve a survey of the organized socialist movement, the growing millions of its adherents and the effect of Syndicalism and Progressivism on its fortunes. Space limits make it necessary to restrict attention to another aspect, the question whether certain tendencies in state action, certain policies widely championed by parties and by individuals not in sympathy with the organized socialist movement, are really socialism on the instalment plan.

PROFESSOR O. D. SKELTON.

What are the Tendencies?

What are the tendencies which are said to make for socialism? They are, the rapid growth of state and municipal ownership, the regulation by the state of that part of industry which it has not yet taken over, the supertaxing of the rich and the supercoddling of the poor. Every time a western town starts a municipal street railway, or a Lloyd-George proposes an Unemployment Insurance Act or "raids some hen-roosts," or a Canadian province insists on a maximum of hours or a minimum of sanitation in industry, the step is hailed alike by many who fear and many who hope, as another advance toward socialism. Are these hopes and fears justified

Take first government ownership. Its growth has been striking, but both its extent and its significance are commonly exaggerated. Its growth has been confined to a limited and specific field. An occasional town has opened a municipal bakery, an occasional state monopolizes the manufacture of matches, with results which throw a good deal of light on state methods, but at least ninety-five per cent. of the productive industrial operations of our governments fall within the bounds of the natural monopolies of transport, communication, and transmission of water, light, heat and power. They are operations which require special and exclusive privileges in the use of the streets, surface or underground, or in the grant of expropriation powers; some are of special importance to public health or national safety; they are relatively simple in operation, staple in demand, stable in revenue; in all, competition is wasteful and transitory, because from the nature of the service both competitors must try to cover the whole ground, with costly duplication of plant.

Extension of Public Ownership.

Neither the success nor the extension of public ownership in this field warrants the deduction that it is either feasible or inevitable in the region still reserved to private initiative, where no exclusive privileges are sought, where the business is highly complex, the changes in method frequent, the market fluctuating and requiring assiduous nursing, and where, finally, competition involves only to a slight degree covering the same ground. Even in this special field, public regulation may well share the field with public ownership. The day of unregulated private control of public utilities is gone, but the possibilities of private operation under the supervision of commissions freed from court technicalities are only beginning to be realized.

Again, the growth of public ownership should be considered in proper perspective. The real question is, is a larger proportion of the field of industrial activity coming rapidly under state operation? Public ownership moves in the limelight of newspaper comment and council debate; private ownership suffers the obscurity of the obvious. We see a Western province setting up a public telephone system, but forget that in the prairie provinces during the past year farm lands twice the area of Wales passed from public to private ownership. We see a town, after protracted discussion, decide to buy the street railway company, but overlook the score of factories set up, the branch banks opened, the stores extended, during the same period.

Private Capital Investments.

Definite and comparable statistics of the extent of public ownership at different periods are difficult to obtain, but some indications may be given. In the United States the total property exempt from taxation, including national and local government property, as well as religious and educational property—the latter about one-third of the whole—formed, in 1890, 6.2% of the nation's wealth, and in 1904, 6.8%—certainly not cyclonic advance. In 1908 the total productive undertakings of United States cities of 30,000 and over were capitalized at about $990,000,000; a great amount, it is true, until one compares it with the $9,450,000,000 increase in the ten years from 1899 to 1909 in the capital invested in private factories, or the $20,550,000,000 increase in the value of private farm property.

Not only is more and more capital being invested in old lines, but entirely new fields are opened for private enterprise, which more than offset the encroachments of public ownership. Motor car manufacturing, almost entirely a growth of the past decade, employs ten times more capital than all the municipally owned gas and electric light and electric power plants in the United States. Or turn to the United Kingdom, where municipal ownership has found greater favor; there the total investment in municipal enterprises is little more than one per cent. of the total wealth of the country, and the bulk even of this is cancelled by the debts due to private bondholders.

Limited State Ownership.

Nor should we lose sight of certain factors which do not prevent a limited degree of state ownership coming about, but which render its full extension difficult and improbable. It has been private capital that has financed public ownership; it is in private industry that the dividends have been re-invested; it is private industry that has trained the men, devised the methods and often provided the stimulus that have made state activities successful, and that has afforded the outlet for those not content in the state's rigid service. But this is possible only when public industry is small compared to private. The saturation point is soon reached. And again, the solution we have adopted of the political problem —forbidding or discouraging state employees taking an active part in politics—is possible only when those employees

re a small fraction of the whole working force. Extend the ystem, and you disfranchise the nation. When everybody is civil servant, you cannot take the civil service out of olitics.

Government Regulation of Industry.

Government regulation of industry, again, is undoubtedy increasing. But it does not follow that its net result is o lessen competition. The state referees the game, but the ame is none the less strenuous because played under rules. Government intervention is not necessarily wise, governments, as a rule, being merely human, but neither is it neessarily hampering. A child labor law, prohibiting the emloyment of children under fourteen, does not do away with competition, but simply raises it to a higher plane; employrs may compete in organization, in opportune buying and elling, in quickness to seize new methods and new openngs, but they must not compete in callous disregard of childood weakness and childhood needs. A Railway Commission, orbidding one competitor to crush another by secret rebates, ives competition new lease of life. It was the lack of reguation of railway rates that permitted the Standard Oil Comany to crush its competitors; under regulation, the rivals of he Steel Trust and the Sugar Trust are wresting yearly a arger share of trade.

So with state provision of common needs, in free schools, ree parks, free playgrounds. Such state activities can fairy be said to make for socialism only where it would be reaonably possible for the individual to provide the service imself, and where the net result is to weaken self-reliance. ree public parks supply a need which the average dweller n our congested cities can no longer meet himself; free oots for school children supply a need he could meet, or if ot, the trouble is too deep-rooted to be cured by any such nkering.

Does the help given lessen the initiative, the self-reance, the independence of the recipients, or does it enable hem to help themselves, make them more fit and more inined to take their part in the struggle? Free education hould, I think, be rated as on the whole an individualist easure; the non-contributory old age pensions scheme reently adopted in England, with its failure to grapple with he causes of the poverty it sought to meet, its inevitable equel in demands for higher pensions and lower age limits, distinctly a socialist step. It is significant that in the ter Lloyd-George insurance measures the non-contributory asis has been abandoned.

tate's Power of Taxation.

Conceivably, the taxing power of the state could be ought to bear so heavily on the rich as to amount to conscation. But as a matter of fact, while the tendency in urope is to make the broader back take a larger share of e burden, it can hardly be said on any reasonable interetation of ability to pay that the rich are as yet taxed unly. And as for Canada, the case is quite the contrary. ere, with our reliance mainly on indirect taxation, our rich en are undertaxed. A federal income tax is not at present practical politics, but it will be before many years. And e taxes our land barons and others pay can be increased efore we will be within hailing distance of socialism.

Not only are these policies not necessarily socialistic; ey are the best bulwarks against socialism. They are omeopathic cures, vaccination against its growth. For prite property to-day is on the defensive. It has no heavenorn sanction. It will endure only so long as it proves soally beneficial. The hour of social as well as political deocracy has come. The ideal which will prevail, the ideal ared by socialists and individualist reformers alike, is the ganization of industry in the interest of the masses of the ople. Our existing order will endure if it can be made, d can be shown, to be true, that private property is a betr means of attaining this end than collectivist property. It ust be shown that within the existing framework of society e can combine private initiative and private energy with soal control and social justice. Every tax-dodging millionre, every city slum, every instance of shady high finance or overworked and underpaid employees, is a potent arguent for socialism. Remove the grievances—and they are any, even though exaggerated by the socialist out of all rspective—and the socialist has lost his best ammunition.

BRITISH CAPITAL APPLICATIONS

Last Year, Over Two Hundred Millions Sterling Was Loaned In All Parts of the World.

As shown on other pages of this issue of The Monetary Times, Canada again obtained last year a large amount of British capital. This country, however, was only one of a large number in various parts of the world which sought funds in London. Notwithstanding the small amount of new capital applied for in November, due to the dark international political situation, the total amount raised in the first eleven months of the past year reached £200,000,000, in comparison with £176,000,000 in 1911, when the Moroccan difficulty interfered with the raising of new capital, and in comparison with £227,000,000 in the corresponding period of 1910. For the complete year it is probable that the new issues will not fall far short of those for 1910, as in December of that year there was practically no appeals to the London market.

For the whole of 1910 the new capital issues were £232,000,000; for 1911 they amounted to £196,000,000, and for the past year to November they were £200,000,000, and will probably exceed £210,000,000 for the twelve months.

Purposes of Loans.

The purposes for which new capital has been subscribed during that period are indicated in the following table compiled by Sir George Paish, with comparisons:—

Description of Security.	11 Months to November 30. 1912.	1911.	1910.
Government	£26,236,737	£33,146,355	£45,668,506
Municipal	16,354,929	8,880,348	11,974,496
Railways	4,702,242	52,027,855	56,295,132
Banks	7,345,000	3,502,000	1,681,039
Breweries	1,387,040	240,000	675,000
Canals and docks ..	400,000	....	532,000
Commercial, industrial, etc.	28,902,399	24,532,711	21,453,342
Electric light and power	5,796,590	4,464,722	3,522,534
Fin., land, investment and trust	14,639,577	14,876,176	20,184,584
Gas and water	1,803,187	1,705,320	102,500
Insurance	418,750	570,873	2,339,890
Iron, coal, steel and engineering	8,161,067	3,091,747	5,652,445
Mines	5,847,923	8,817,538	10,674,909
Motors and motor manufacturing .	516,812	265,736	350,149
Oil	6,383,782	3,558,375	10,273,086
Rubber	2,671,845	3,684,186	20,553,175
Shipping	9,023,812	650,000	4,300,055
Tea and coffee	178,400	567,500	104,500
Telegraphs and telephones	2,821,303	1,706,010	2,637,500
Tramways	13,754,962	5,646,573	4,550,988
Total	£193,346,857	£171,834,934	£223,525,838
Sold in market	6,853,341	4,526,780	3,476,570
Total	£200,200,198	£176,361,714	£227,002,408

Destination of Capital.

The destination of the capital that was raised for the eleven months of 1912 is as follows, with comparisons:—

	11 months to November 30, 1912.	1911.	1910.
Unitel Kingdom ..	£48,181,922	£30,229,689	£ 41,089,291
India and Ceylon ..	3,810,320	5,244,165	14,675,503
British possessions .	54,131,028	46,740,443	66,576,616
Foreign countries .	94,076,028	94,138,417	104,660,098
Total	£200,200,198	£176,361,714	£227,002,408

* * *

The wholesale distributing trades have everywhere enjoyed a good year. Groceries, dry goods, clothing, boots and shoes had an unusually large turn over, with good results. Accounts were fairly well paid and bad debts were comparatively small.

It is within the range of possibility that in a few years Western Canada will produce 500,000,000 bushels of wheat, and to every farmer west of Moose Jaw ten cents a bushel will be saved by the Panama Canal, provided Canada gets a square deal. Failing that, the West Indies will be the half-way house of the world's commerce. The American people will not tolerate that; and it is for Canadians to educate them along these lines. Unless the canal is open to all nations it will be a serious menace to Canada.—Mr Wallace Nesbitt, K.C., Toronto.

ANADIAN LOAN COMPANIES AND EUROPEAN MORTGAGE BANKS

fferences in Existing Conditions—Reduction in Interest Rates Might Deflect Capital from Western Provinces

In the United States considerable attention has been ven recently to the working of the big mortgage banks of rmany and France, with the object of discovering whether at feature of European finance could with advantage be bor- ved or adopted by America. In Europe these banks lend agriculturists at 4¼ or 4½ per cent.; and it is thought at if loans could be made at those rates to American farm- the agricultural industry would be greatly encouraged and nefited. Naturally the discussion of this question in the ited States' journals has aroused the interest of Canadian rrowers. In one or two of the western provinces especially ere has been persistent agitation for government loans to mers.

Most well-informed people have a lively consciousness of evils that would follow if the business of lending on farm rtgages became a part of the duty of a provincial govern- nt. A recent article on the subject of government loans ys in part, "Why, at every election there would be a regular ling for us all so long as our party friends were able to rrow; and if the other side got in we could surely mollify by changing our coats. Nothing could be easier, if any n of Belial of a provincial treasurer undertook to crowd us arrears of interest or principal, than to form a third party dged to eject him and his colleagues, too."

rcumstances are not Similar.

With reference to the European mortgage banks they were ugurated in Germany because facilities for financing ricultural activity were lacking or deficient. In many cases would-be agricultural borrower could get no loans at all. at is not the case in Canada. In all provinces of the Do- nion funds are available, but in the newer provinces rates often uncomfortably high. The question as to the measure success that would attend the operations of a big Canadian rtgage bank framed on the plan of the German institutions brimful of interest. It should be mentioned that in rmany, as a rule, the mortgage bank is an association of rrowers, that is to say the borrowers form or organize the nk and control its operations. Let us take note of some of circumstances which such a bank would encounter if nched in Canada.

In the first place it is not to be expected that a Canadian rtgage bank could lend as cheaply as do the European nks. Those banks lend at 4½ because they are able to get eir funds at 3¾ or 4 per cent. A Canadian mortgage bank nding on its own feet could not borrow so cheaply, and in all bability it would require a wider margin for expenses. erating expenses in Germany are low for the reason that in st cases well-to-do men give their services without re- neration.

Philanthropic Motives.

In this connection it is interesting to recall the playful rust given to one of the members of the United States netary Commission by an official of a big German mort- ge bank on the occasion of the sub-committee's visit to rmany a couple of years ago.

The German had explained to the American that some actical man in each locality—a farmer, mechanic, teacher, preacher—would act as president of a local society or anch and give a large part of his time to the business of branch free of compensation, and the American said, with rprise, "Will you explain why an important farmer in a mmunity would accept the position of president, the duties which might require his entire time, and this without com- nsation?" The German replied, "As with a teacher and eacher, there is an ideal feeling, a society feeling. We equently do things for which we are not paid."

Not quite recovered from his astonishment the American ain queried, "He is prompted by philanthropic motives?" d the German rejoined with "Yes. Something which will difficult for you Americans to understand."

penses Not Less Than One Per Cent.

It is to be feared that in Canada high class, disinter- ted services of this kind could not be had locally unless mpensation were paid. And perhaps it would be necessary allow a margin of at least one per cent. for expenses. Quite ssibly a wider margin would be needed at the beginning. e Canadian loan companies commonly pay 5 per cent. on bentures issued in Canada. In the north of England and Scotland the well established Canadian loan companies can sue debentures at a lower rate of interest. With provincial overnment guarantee perhaps a big Canadian mortgage nk could borrow in Europe on debentures at 4½. And with Dominion Government guarantee it might procure its funds at 4 or 4¼. But if it had no government guarantee it would likely have to pay 5 in Canada and 4¾ or thereabouts in England and Scotland. If it pays those rates and has to allow 1 per cent. or 1½ per cent. for expenses, it certainly could not lend to the farmers at 4½ or 5 per cent.

Might Lessen Supplies of Capital.

It is likely that in Eastern Canada the established loan companies would lend quite as cheaply as the mortgage bank.

So far as the West is concerned it might develop that heavy reduction in the rates of interest on mortgage loans would lessen the amount of capital held available for western borrowers. At present the attractive interest rates draw capital in heavy volume from the United States, Eastern Canada and Europe. If a new mortgage bank could only take over a small proportion of these outside loans it would not influence the general rate to a great extent. It should be remembered, too, that the big loan and mortgage companies now in the field are in reality mortgage banks. Their organization is very highly developed, and the volume of their business is so great that a moderate margin on the average loan gives them a large annual profit.

THREE BANK AMALGAMATIONS

Number of Chartered Banks Reduced, but Branches Continue to Multiply Rapidly

The number of individual chartered banks in Canada was reducted by amalgamation last year from 28 to 25, the transactions being as follows:—

Bank of Commerce absorbed Eastern Townships.

Royal Bank absorbed Traders Bank.

Bank of Nova Scotia absorbed Bank of New Brunswick.

Each $100 share of Eastern Townships Bank stock was exchanged for two shares (par value $50 each) of stock of the Canadian Bank of Commerce.

The chief features of the Royal-Traders agreement approved by both banks were as follows:—Traders Bank of Canada shareholders receive three shares of Royal Bank stock for every four shares of Traders Bank stock. This means that if Royal Bank of Canada shares be valued at $240, Traders Bank shares are worth $180 each. Three directors of the Traders Bank of Canada become directors of the Royal Bank of Canada. All officers and clerks of the Traders Bank were taken into the service of the Royal Bank of Canada and admitted to the Royal Bank's pension fund.

Share for Share and Bonus.

The Bank of New Brunswick shareholders received share for share and a cash bonus of $10 a share.

The dividends being paid by the six banks concerned, were as follows:—

Bank.	Dividend %
Commerce	10+1
Eastern Townships	9
Royal	12
Traders	8
Nova Scotia	14
New Brunswick	13

Reasons for Amalgamation,

The directors of the Eastern Townships Bank, stated that they had in mind that the tendency of banking development, both in Europe and America, is to combine capital in such a way as to save expense in administration, multiplicity of buildings and the various disadvantages which attend the operation of small banks.

A director of the Bank of Nova Scotia, thought that the amalgamation in which his bank was interested, was the beginning of a new era of progress in the Maritime provinces.

Depositing and borrowing customers of both the Royal and Traders banks would, it was stated benefit through the amalgamation, as the larger bank should ensure a great measure of safety for the depositor, and its increased reserve would enable it to take care of its borrowing customers in times of financial stress.

Few Banks, More Branches.

These amalgamations having reduced the number of head offices to 25, that figure is two less than the number existing as far back as in 1869.

There were no bank failures during 1912. One new institution, the Bank of Saskatchewan, with headquarters at Moose Jaw, was organized, and another was proposed, viz., the Bank of Edmonton.

THE BANK OF OTTAWA

Incorporated 1874

Capital (fully paid) - -	$3,825,480.00

BANK OF ENGLAND RATE

Changes in the Rate During the Past Thirteen Years —How to Read the Bank's Weekly Statement

A change in the Bank of England's discount rate occurred last year four times compared with four changes in 1911, and nine in 1910. The following table compiled by The Monetary Times gives the number of fluctuations for a series of years:—

Year.	Times Lowered.	Times Raised.	Total Changes.
1912	2	2	4
1911	1	3	4
1910	6	3	9
1909	2	4	6
1908	6	.	6
1907	3	4	7
1906	2	4	6
1905	1	2	3
1904	2	.	2
1903	2	1	3
1902	2	1	3
1901	5	1	6
1900	5	1	6

The following table gives details of the actual changes:—

Per Cent.

1912—October 17	5	April 25	4
August 29	4	April 11	4½
May 9	3	January 17	5
February 8	3½	**1906**—October 19	6
1911—September 21	4	October 11	5
March 9	3	September 13	4
February 16	3½	June 21	3½

How to Read the Statement.

The Bank of England being admittedly the hub of the financial universe, its weekly statement possesses a world wide interest. When its discount rate is raised unexpectedly commotion is caused throughout all banking circles.

The "rest" is simply an accumulation of undivided profits. It is never permitted to decline below £3,000,000. The amount in excess of this figure is the sum available for distribution among the proprietors of the bank. The money lodged by the government with the bank, or the national deposits, comes under the head Public Deposits. Naturally this item is subject to many fluctuations. When the public deposits are high the Bank of England's discount rate must be firmer, as the reserves of other banks are curtailed.

The item Other Deposits includes the balance of the London Joint Stock Banks—which keep an account with the Bank of England—and also the balances of ordinary clients.

On the Other Side.

On the other side of the statement the items Government Securities and Other Securities correspond with Public Deposits and Other Deposits in their interpretation. Perhaps the most important of the figures in the return are those representing the Reserve. This comprises two items. Notes and Gold, and Silver Coin. Gold and Silver Coin and the notes, which are in the bank's till, after sufficient has been placed aside for the total of notes issued, represent the Reserve. It is thus easy to obtain the percentage of reserve in ratio to liabilities. The average of the reserve in proportion to liabilities for the past twenty years is about 45 per cent.

INCREASE IN CANADA'S BANK CAPITAL

How it Has Grown in Twelve Years—Absorptions and Failures as a Factor—Some Interesting Statistics

The adequacy of Canadian banking capital, especially in connection with the movement of the Western crops, has always been a prominent topic. The proposed amendment to the Bank Act will improve matters considerably. Under the present act, the banks of Canada are permitted to issue their notes to the amount of their unimpaired paid-up capital. There is also a provision in the existing act whereby, during what is called the crop moving period, from the first of September until the end of February, the banks are permitted, upon payment of 5 per cent. for the privilege, to issue additional circulation to the amount of 15 per cent. of their unimpaired paid-up capital in reserve. These payments are being reserved to the banks but, in addition, it is proposed to give the banks the right to issue note circulation against gold.

At present, the banks may deposit gold with the officers of the receiver general and receive Dominion notes, five-dollar notes, or notes of a larger denomination, in exchange for it. The gold is deposited as security, and as a guarantee for the redemption of the Dominion notes so issued. The banks, therefore, in addition to their authorized circulation, circulate large amounts of Dominion note circulation, secured in the manner indicated. During last fall, the Dominion issued over $10,000,000 of the new five-dollar notes. The banks obtain those and circulate them in addition to their own note circulation. The expense of printing those notes is on the Dominion, and the expense of holding the gold, which is deposited before those notes are issued, also falls upon the Dominion.

The capital power of our banks is shown in the following table, the figures being culled from the November bank statement:—

NAME OF BANK	Capital Authorized	Capital Subscribed	Capital Paid up	Amount of Rest or Reserve Fund
Bank of Montreal	25,000,000	16,000,000	16,000,000	16,000,000

---

[1] Issued for the purchase of the Halifax Banking Company.

[2] Sold privately.

[3] Later, on June 25, 1903, these shares were subdivided, each shareholder getting two $100 shares for each $200 share held.

[4] This issue was made when the Bank of Montreal took over the Peoples Bank of Halifax. The new stock was given to the shareholders of that Bank in payment for their capital stock, they taking the Bank of Montreal's Stock at 253, the Bank of Montreal allowing 115 for Peoples Bank Stock.

[5] Issued to shareholders of the Union Bank of Halifax at 250 per share in exchange for their Stock at 200. Five $50.00 shares of Union Bank Stock were exchanged for two $100 shares of Royal Bank.

[6] [illegible] of new shares allotted to existing shares

[7] Issued to shareholders of the Traders Bank in the ratio of three shares of the Royal Bank Stock for four shares of Traders

[8] In December, 1908, when $200,000 new capital was issued, the old 60,000 shares of $30 each were converted into 20,000 shares of $100 each. The shareholders were entitled to subscribe $\frac{1}{9}$ of their old amount, at 120%, but were authorized, when necessary, to subscribe an additional amount sufficient to make full shares of $100; fractions left were refunded at the same rate, 120%. At the annual meeting, on May 17, 1911, an increase of capital from $2,000,000 to $5,000,000 was authorized by the shareholders and this authorization was duly confirmed by the Treasury Board.

[9] Issued to Bank of New Brunswick.

JAS. M. WELBORN, President
CHAS. H. RODDIS, Secretary-Treasurer

PRINCE ALBERT - - SASKATCHEWAN

Authorized Capital - - - - $1,000,000.00
Paid Up Capital - - - - - 150,000.00

WE act as Agents for Old Country Clients in the investment of funds in first mortgages on improved Prince Albert property, and guarantee all investments made through us. In no case does the mortgage exceed fifty per cent. of the actual value of the property, and all loans are fully covered by fire insurance.

Funds invested to net clients seven per cent. per annum, payable half-yearly in sums from five hundred dollars and upwards, with annual reductions on principal.

We also act as Agents for investments in purchase of City and Farm properties, offering opportunities for substantial profits.

INCREASE IN CANADA'S BANK CAPITAL

(Continued from Page 60).

Bank of Vancouver	2,000,000	1,173,900	846,600	40,000
Weyburn Security Bank	1,000,000	630,000	315,000	15,000
Banque Internationale du Canada	10,000,000	10,000,000	1,359,833	Nil.
Total	193,866,666	121,580,766	111,544,475	106,212,072

The authorized capital is $193,866,666, of which $121,580,766 has been subscribed. That leaves a margin, authorized and not subscribed, of $72,285,900.

The Monetary Times has gathered statistics showing the actual increase of bank capital since 1900. The following s a summary together with the details collected:—

Bank.	Capital issued between 1900 and 1911.
Commerce	$4,000,000
Dominion	2,500,000
Eastern Townships	1,500,000
Home	1,500,000
The Molsons	1,500,000
Montreal	3,000,000
Nova Scotia	2,140,000
Ottawa	1,500,000
Royal	6,900,000
Standard	1,000,000
Toronto	3,000,000
Traders	4,000,000
Union	3,600,000
Hamilton	1,000,000
Northern Crown	2,207,500
Imperial	3,500,000
New Brunswick	726,700
Nationale	800,000
Hochelaga	1,250,000
Total	$46,424,200

From 1900 to 1911, the increase in bank capital, by existing banks was $35,490,000. This was issued by 14 banks. To this must be added new capital issued during 1912, amounting to $11,860,000 the details being as follows:—

Bank.	Amount of new issue.
Commerce	$3,000,000
Ottawa	500,000
Merchants	1,000,000
Royal	3,360,000
Hochelaga	500,000
Standard	500,000
Toronto	1,000,000
Hamilton	1,000,000
Bank of Nova Scotia	1,000,000
Total	$11,860,000

To that sum another addition must be made, viz., the amount of paid-up capital of the banks which have commenced business during the period under review. The total is $9,529,765, made up as follows:—

Bank.	Paid-up capital November 1912.
Metropolitan	$1,000,000
Home	1,294,646
Northern Crown	2,677,996
Provinciale	1,000,000
Sterling	1,035,690
Vancouver	846,600
Weyburn	315,000
Internationale	1,359,833
Total	$9,529,765

From that sum must be deducted the paid-up capital of banks which failed or were absorbed during the twelve years period. The amount is $16,195,200 and is divided as follows:—

Year	Banks suspended.	Paid-up Capital.
1905	Bank of Yarmouth	$ 300,000
1906	Ontario Bank	1,500,000
1908	Sovereign Bank	3,000,000
1908	Banque de St Jean	316,386
1908	Banque de St. Hyacinthe	331,235
1910	Farmers Bank	567,579
	Banks Absorbed:—	
1910	St. Stephens Bank	200,000
1912	Eastern Townships	3,000,000
1912	Traders Bank	4,480,000
1912	Bank of New Brunswick	1,000,000
1912	Union Bank of Halifax	1,500,000
		$16,195,200

The net capital stock issued since 1900, therefore, is $40,684,565, obtained as follows:—

Increase in Bank capital, 1900 to 1911	$35,490,000
Add capital issued during 1911	11,860,000
	47,350,000
Add capital of banks formed since 1900	9,529,765
	56,879,765
Less paid-up capital of banks absorbed or failed	16,195,200
	$40,684,565

In April, 1911, authority was obtained from the Treasury Board to increase the stock of the Quebec Bank to $5,000,000.

This bank will issue 5,000 shares of the unissued capital stock during the current year. This will be offered to the shareholders at a premium of 25 per cent., that is to say $125 for each share of the par value of $100.

The Banque d'Hochelaga will issue $1,000,000 new stock this year, at 150, the ratio being 1 to 3.

The Merchants Bank has authority to increase its stock from $6,000,000 to $10,000,000 whenever deemed expedient. Last year it issued $1,000,000 of that sum.

An examination of the above tables would indicate that the reserve funds of many of the banks have been large gainers from premiums at which their capital stock was sold, the amount applied from surplus earnings being less than generally supposed.

PRICE OF SILVER

The following is a record of the price of silver per ounce in London, for the past two years:—

BRITISH CONSOLS MADE NEW LOW RECORD

Prices of Past Years—Great Britain Not the Only Sufferer—World-wide Causes

When British Consols declined in 1911 to 76 7/16 it was thought that they must surely have reached the lowest possible point. Last year, however, further declines occurred, and in October they dropped to 73, at which figure they yield about 3.40 per cent. to the investor. The highest price in 1912 was 79 3/16, and the lowest price 72½.

The following are details of the highest and lowest prices each year, and dates when such prices were touched Three per cents. were created first about 1726. In 1737 the price touched 107. During the 1745 Rebellion the monthly average price dropped to 75. In 1752 the quotation reached over 107, that being the average of December.

Highest and Lowest for Years.

Other monthly averages were : 1762, January, 65; 1763, March, 96; 1782, January, 53⅛.

Discussing the decline of British Consols last year, Sir Felix Schuster, the well known London banker and financier, and a director of the Grand Trunk Pacific Railway, said: "It has to be remembered that a decline in the value of securities yielding a comparatively low return has not been confined to Great Britain alone. The fall in value of the British Government securities at the end of June, 1912, compared with the end of June, 1911, amounted to 2¾ per cent., those of Germany to nearly 3½ per cent., of France to nearly 2½ per cent., Belgium to 7 per cent., of Austria 3 per cent., Russia to 3½ per cent., and of Italy, partly owing to the war, to 6 per cent.

"Somewhat similar causes must then have been operating to a more or less marked degree on the continent of Europe, and a comparison might with equal force be extended outside the limits of Europe also. Activity in trade all over the world has diverted money from investment markets to commerce, which yields a higher return."

◆

Company incorporations by Federal letters patent increased from 544 to 658 in the fiscal year ended March 31st, 1912, according to the report of the State Department. The aggregate capitalization was $490,565,999, including $42,939,999 secured by existing companies through supplementary powers.

◆

YEAR'S STOCK EXCHANGE BUSINESS

The total sales on the Toronto Stock Exchange the past year, as estimated by Mr. Houston, shows a very material increase, except in the bond transactions, over previous years. The totals do not include the sales in the unlisted departments. The figures are:—

	Stocks.	Bonds.
1912	1,168,314	$1,711,220
1911	914,553	1,998,230
1910	940,544	2,829,220

Montreal figures are:—

1912	2,338,058	$6,295,359
1911	2,255,158	5,968,800
1910	2,137,426	6,124,530

◆

PRICE OF SILVER

(Continued from Page 64).

Discussing silver prices, Mr. T. W. Gibson, Deputy Minister of Mines for Ontario, in his latest mining review for that province, states that the course of silver prices for the future is impossible of prediction. The cheapening of metal, he adds, has of late years greatly favored its employment in the arts, for plate, etc., and the requirements of commerce in the trading nations of the world will ensure a steady demand for coinage purposes. The reforms in the currency system of China, which were undertaken by the Imperial Government before its overthrow by the Republican forces, will, it is expected, be hastened by the new rulers of that country, and this will necessitate the use of a very large quantity of silver. It is proposed to substitute for the "tael," which varies in weight and value in the various provinces of China, a standard dollar, having a weight of 414.5 grains, and a fineness of 900. Some of these coins have already been issued.

Silver Popularity May be Waning.

On the other hand, there are those who allege that the popularity of silver, which for centuries has been the favorite medium for hoarding there, has begun to wane in India. They point to the fact that, after deducting amounts re-exported from amounts imported, the home consumption for the year ending 31st October, 1911, was only 44,000,000 ounces, as against 56,400,000 ounces in 1910, and 60,843,000 ounces in 1909. Most people are aware that a tremendous awakening is taking place in almost every department of life in the East, and this awakening is not confined to Japan or China, but extends to India, Siam, Persia, and to practically all the nations of the Orient. A decided feature of the movement is the tendency to adopt Western methods in education, politics, and finance. It is alleged that the diminishing use of silver for investment is accompanied by larger purchases of gold, especially by the wealthier classes, who find gold more convenient and less subject to fluctuations in value. Whether this preference will eventually work a change in the deep-rooted custom of putting their savings into ornaments and objects of silver, which has characterized the people of India from time immemorial, remains to be seen. The East is no longer "the unchangeable," and no one can prophesy what will happen.

How Price Helps Cobalt.

Production of silver will continue at Cobalt regardless of whether the price of silver falls or rises, since the ores are so rich as to leave a wide margin over the cost of operating. Nevertheless the fluctuations of the market, in view of the largeness of the output, are of great consequence to the camp. An increase of one per cent. per ounce on the production of 1911 would have brought the mine-owners $314,998 more than they actually received, while three cents an ounce would have given them an additional return of nearly a million dollars.

AN INTERESTING CHAPTER OF HISTORY

IN countries which have had the benefit of civilization counted by centuries, a forty-five years' record of financial and commercial journalism may not be unusual. In Canada, comparatively a new country, *The Monetary Times* has no competitor in the matter of age; we think it will never have a serious rival so far as honesty of purpose and enterprise are concerned.

Last year a short history of this paper was printed in our annual number. Since then, the circulation of *The Monetary Times* has again gained considerably. For the benefit, then, of many new readers, and as a string of recollections for old friends, an outline of the paper's career is given.

Forty-five years ago, when Canada did not reach from ocean to ocean, but consisted of the two Provinces which are now Quebec and Ontario; before Confederation; before there was any Yukon, or any Cobalt, or any "North-West," it occurred to a small group of men in Toronto that need existed for a "weekly" of commercial and financial opinion, a paper that should deal intelligently and courageously with insurance, commercial law and practice, and matters relating to investment generally. They decided to start *The Monetary Times*.

The late Hugh Scott, the well-known underwriter, and the late William A. Foster, Q.C., were sponsors for the first issue. It was a 16-page sheet, small quarto, with very few advertisements, for, as Scott proudly said afterwards: "We never canvassed for a single card until the venture was self-supporting by means of subscriptions or voluntary advertisements." Its first printer was John Ross Robertson, then a publisher on Yonge Street, now proprietor of The Evening Telegram.

The paper was intended to be, in the domain of business, what The Nation afterwards was in the literary field, a vehicle for the views and feelings of Canadians, aiming to be self-governed, patriotically ambitious, resenting dictation and pedantic methods in either government or commerce. Its tone and purpose commended *The Monetary Times* from the start, and Foster became its editor.

At that date (1867) there were twenty-six chartered banks in Canada whose paid capital was $29,831,000. Eighteen of these have since been amalgamated or wound up. The remaining eight, which are still in existence, with greatly enlarged scope, are the Bank of Montreal, the Canadian Bank of Commerce, the Quebec Bank, the Bank of British North America, the Bank of Toronto, The Molsons Bank, the Merchants Bank, and La Banque Nationale, together with many others which have since come into existence. There were in Canada at that day 120 bank agencies in 55 places of Ontario and Quebec. To-day, there are more than 2,700 branches and agencies of Canadian banks, distributed from Sydney to Vancouver and Alaska.

Confederation of the scattered Provinces was effected in 1867, when Nova Scotia and New Brunswick and Prince Edward Island became part of Canada. The purchase of our Far West prairie lands from the Hudson Bay Company followed in 1870, and in the next year British Columbia joined the Dominion. Our nation-building was begun, and there followed a period of growth and expansion during which the Canadian Pacific Railway became a wonderful factor in extending our trade with the world.

During these years *The Monetary Times*, under the editorial management of the late J. M. Trout, grew with the country. It absorbed three other commercial papers, one in Toronto and two in Montreal; the subscription list of one of the latter, the Trade Review, founded by Erastus Wiman, and edited by Hon. James Young, gave it a hold upon the commercial reading public in Quebec and the other Atlantic Provinces which it has ever since retained; while, as Manitoba and the West came into increasing prominence, the circulation of the paper west of the Great Lakes went ahead steadily.

The aim of the management was then, as it is to-day, to furnish a paper that should be carefully written, from the standpoint of experience and calm observation. Knowledge of affairs, independence of judgment, moderation of tone, were usually to be found in the utterances of its writers, among whom were Cabinet Ministers, prominent financial men and lawyers, well-known manufacturers and merchants and agriculturists. Though not always brilliant or spicy, it was usually sound; and, while not assuming to possess all the virtues, it showed fearlessness and rectitude in high degree.

The paper soon became known for its outspokenness upon fraudulent finance or business dishonesty. Some of the writers who laid the foundation of its reputation, and helped to maintain it, in addition to Foster, who was a brilliant writer, were George Hague, who long wrote the Monthly Financial Review; Charles Lindsey, whose able summaries of The Situation were a feature for many years; R. R. Grindley, Hon. James Young, James Hedley, and other prominent publicists. While giving much attention to home affairs, in dealing with budget speeches and commercial decision, or summarizing blue books, it kept a wider outlook in having correspondents in England, United States and France.

This brief outline of a formative period in the history of the Dominion suggests many contrasts, statistical and other, into which there is not space or time to enter. But it is a satisfaction to those—some of them still living—who helped to found *The Monetary Times*, to know that it has reached a goodly age for a young country, and that its hold upon the respect of its increasingly numerous patrons is well maintained.

The Metropolitan Bank

W. D. ROSS, General Manager

A NETWORK OF STEEL

From Nova Scotia to British Columbia — Canadian Pacific Railway's Numerous Development and Construction Enterprises

The Canadian Pacific Railway again enjoyed a period f progress and development during its past fiscal year, which ended on June 30th, 1912. Sir Thomas Shaughnessy, he president and chairman of the company, had a pleasing tatement to submit to the shareholders. Most interesting o the country at large were the extensions and new connecions, made and proposed by the company. For the purpose of securing a shorter and more expeditious route beween Quebec and points in New England, served by a riendly connection, the Boston and Maine Railroad, the irectors thought it advisable to lease the Quebec Central Railway, forming the connection between Sherbrooke and Levis, together with branch lines from Beauce Junction to St. Sabine, and from Tring to Megantic, all in Quebec, naking a total of about 253.5 miles of railway, at a rental ased upon the interest on the outstanding 1st, 2nd and 3rd nortgage bonds of the Quebec Central Railway Company, nd a dividend on the outstanding capital stock of that comany at four per cent. per annum for four years from July st, 1912, and thereafter at the rate of five per cent. per anum.

oncerning Acquired Lines.

The Shuswap and Okanagan Railway, 51 miles in ength, extending from Sicamous Junction, on the main line n British Columbia, to the head of Okanagan Lake, was eased to the company on its completion in 1892 for a period f 25 years, and it was a condition of the lease that the comany should pay by way of rental forty per cent. of the gross arnings of the line, as defined in the lease, in quarterly mounts. The interest on the bonds issued by the Shuswap nd Okanagan Railway Company for the construction of the ne, amounting to £10,000 per annum, was unconditionally uaranteed by the Province of British Columbia.

The Georgian Bay and Seaboard Railway, recently built nder Canadian Pacific Railway auspices between Victoria arbor, on Georgian Bay, and Bethany, Ontario, to provide shorter and more economical lake and rail route between Western Canada and the Atlantic Seaboard, proved more xpensive than was anticipated, due to the character of the ne that it was finally determined to construct and to other onditions. The power conferred by parliament on the eorgian Bay and Seaboard Railway Company to issue bonds or the purposes of its undertaking was originally limited to 30,000 per mile, but at the last session of parliament this mount was increased to $55,000 per mile, and the directors ave entered into a supplementary agreement with the eorgian Bay and Seaboard Railway Company to increase e limit of that company's bond issue, upon which this comany has, by virtue of the lease approved October 3rd, 1906, greed to pay interest by way of rental, from $30,000 to an mount not exceeding $55,000 per mile of railway.

ew Routes and Track Arrangements.

Instead of continuing the double track from Glen Tay o Agincourt, on the Ontario and Quebec Railway between Montreal and Toronto, it has been decided to secure a line etween these two points that will serve the territory further outh, and will reach several important towns on the north hore of Lake Ontario. An agreement has, therefore, been ade with the Campbellford, Lake Ontario and Western Railway Company for the construction, under the company's upervision and control, of that company's railway, 184 miles n length, between Glen Tay and Agincourt, both in Ontario, nd for the lease of the railway when completed to the comany for a period of 999 years, at a rental equivalent to four er cent. per annum on the bonds of the Campbellford, Lake ntario and Western Railway Company.

The present route between points in the Kootenay and oundary Creek Districts, of British Columbia, and the acific Coast is long and expensive, and the best means of ecuring a more direct route has engaged the attention of he directors for some time past. The Kettle Valley Railay Company, having a Dominion charter, covering the erritory between Midway, the terminus of your Boundary reek Line, and Merritt, on your Nicola Line, undertook to uild the railway between these points, under the advice and o the satisfaction of the directors, upon condition that the ompany would lease the line, approximately 270 miles in ength, and the branch line along the North Fork of the Kettle River, 24 miles in length, whenever and as soon as he Kettle Valley Railway Company is competent to make a ease, paying by way of rental the interest at four per cent. er annum on the bonds of the Kettle Valley Railway Comany, any subsidy received from the Dominion or Provincial overnment, or from any other source, to be applied on an agreed basis towards the cost of the construction of the railway and a corresponding reduction in the amount of bonds to be issued. This line will give access to a large and important section of the province in which development should quickly follow railway facilities.

Large Amounts Expended on New Works.

The amounts appropriated for new works, exclusive of railway construction, were abnormally large, in the year under review. For the enlargement of terminals, additional shops, second tracks, sidings and improvements of every variety calculated to improve the efficiency of the railway system, and to facilitate the movement of the large and increasing traffic, the amount of $30,000,000 was authorized to be expended and orders for locomotives and cars, representing an expenditure of $25,750,000, were placed. Many of these works cannot be completed with the season, with the limited amount of labor available, but no effort is being spared to meet the convenience of the public and to strengthen the position. Canadian manufacturers of freight cars are very much behind in their deliveries, but promise to do better, and there is little doubt that all of the equipment ordered abroad will be forwarded according to contract.

Sanction Received Last Year.

The shareholders last year sanctioned a lease of the Kingston and Pembroke Railway, extending from Renfrew, on the company's main line west of Ottawa, to Kingston, on the St. Lawrence River, and from Godfrey village to Zanesville Mine, in Ontario, a total distance of 107.5 miles; a lease of the Alberta Central Railway, extending from Red Deer to Rocky Mountain House, in Alberta, a distance of 65 miles; an agreement with the St. Mary's and Western Ontario Railway Company cancelling existing arrangements and substituting a lease of their property for a period of 999 years at a rental equivalent to four per cent. per annum on bonds issued or to be issued by that company with your consent to an amount not exceeding $25,000 per mile of their railway; and a deed of conveyance of the Cap de la Madeleine Railway, about 4 miles in length, connecting the railway near Three Rivers, in Quebec, with Cap de la Madeleine, on the St. Lawrence River, and with the Wayagamack Pulp and Paper Company's works.

New Brunswick and Western Developments.

An indenture of lease from the government of New Brunswick, as lessor, to the company, as lessee, of the New Brunswick Coal and Railway for a term of 999 years at a rental of fifty per cent. of the net earnings of the said railway, as defined and calculated in the said proposed lease, will be submitted for your sanction. This railway extends from a point in the vicinity of Minto, in the County of Sunbury, to a point of junction with the Intercolonial Railway, near Norton, in the County of Kings, in the Province of New Brunswick, a distance of approximately 58 miles, and will form a portion of a connection between Canadian Pacific Railway and a coal mine in New Brunswick, now in process of development.

The following branch lines of railway in Manitoba, Saskatchewan and Alberta are being, or will be extended, viz., Boissevain to Lauder, 37 miles; Weyburn Lethbridge branch, 125 miles; Kerrobert northeasterly branch, 11 miles; Wilkie Englia branch, 4 miles; Swift Current Northwesterly Branch, 80 miles, Suffield Southwesterly Branch, 55 miles.

Canadian Pacific Land Enterprises.

The land enterprises of the Canadian Pacific Railway are of interest to both settlers and investors. The company's land in British Columbia secured by the construction of the Columbia and Western, and British Columbia Southern Railways had, by lapse of time and judgment of the court, become subject to taxation. Of the lands in these grants 434,696 acres were sold during the past twelve years at an average net price of $1.77 per acre. As these constituted the most accessible of the lands, and the remainder were so situated that they would necessarily be very slow of sale, your directors decided after negotiations covering a considerable period to reconvey to the government of British Columbia the unsold portion of these two land grants, excepting an area of 543,496 acres, reserved by the company to meet its timber and tie requirements, at the price of 40 cents per acre. This will enable the provincial authorities to encourage settlers to take up on very easy terms such of the lands as may be of use, and the company will be relieved from the cost of administration and from the payment of rather heavy annual taxes. The directors are of opinion that the transaction, which was not completed until after the close of the fiscal year, will prove advantageous to both the province of British Columbia and to the company.

During the year 669,639 acres of agricultural land were sold for $10,710,143, being an average of $15.99 per acre. Including in this area there were 3,270 acres of irrigated land, which brought $44.25 per acre, so that the average price of the balance was $15.85 per acre.

OUR BOND SERVICE

Whether you are in the market for a SINGLE BOND or have an amount of capital to invest that would mean the purchase of a large block, our facilities and experience are at your disposal.

Safety is the FIRST ESSENTIAL in the investment of funds. It is the cardinal principle governing the selection of bonds which we offer to those charged with the investment of trust funds, and also to those having money for investment in safe securities of good yield.

We are at all times ready to place at the disposal of investors our files of general information concerning CANADIAN SECURITIES of all kinds, and shall be glad to answer promptly any inquiries and to give the benefit of our research and advice.

THE MAINTENANCE OF OUR CREDIT IN LONDON IS VITAL

That Motto Should Hang Upon Walls of Every Canadian Office, Business House and Financial Institution—Expert Analysis of Canada's Borrowing Position.

BY SIR FREDERICK TAYLOR.

Quite apart from Canada's loyalty to and affection for the Mother Country, neither of which is questioned, it would be interesting to know how many citizens of the Dominion have a true appreciation of Canada's material obligations to Great Britain. Every schoolboy knows that our very existence as a nation is due to the capture by the British of Quebec in 1759, and to England's subsequent considerate fostering protection; but how many of the younger generation realize that it is London, and London alone, that has provided the money with which our railways have been constructed? How many realize that England has financed almost entirely the funded debts of the Dominion and Provincial Governments, and of practically all our cities of first and secondary rank? That of our total indebtedness to other countries for capital supplied no less than two-thirds is to Great Britain? We propose presenting England with $35,000,000 for battleships, but obviously we must eventually borrow the whole or the bulk of the money for the purpose in London.

It is to be feared that at least the younger generation of Canadians is not fully alive to these cogent facts—to this practical form of assistance, the very basis of our development and prosperity. If the writer is correct in this assumption, would it not be well for the press of Canada to educate the unenlightened, for a delicate stage has been reached in London's financial attitude towards Canada, and we must neglect no effort to remain in favor. The cynical may say that modern gratitude is for favors to come, not for favors past.

In the case of Canada and Great Britain, apart from those higher motives which doubtless animate the great majority of us, self-interest in itself demands that we should remember the past. Doing so will help us to regulate our attitude towards the Mother Country and the people thereof, and assist in maintaining a full measure of confidence in the future. The confidence of the people of Great Britain in Canada means cash contributions. Picture the result if the supply of money from England for Canada were suddenly cut off! It must be obvious to everyone with any knowledge of the subject, or who gives the matter intelligent consideration, that interruption—let alone stoppage—of the flow of capital from England into Canada would instantaneously check the development of the Dominion, with results bordering on the disastrous.

It is not uncommon to hear certain of our countrymen, who should know better, speaking lightly—sometimes almost defiantly—of securing money in New York or Paris, if London is not prepared to lend what is required. The answer to these unwise and inexperienced individuals is: "Try Paris, try Wall Street, and see what the result will be."

Money will be forthcoming from the United States and elsewhere in ever increasing volume for private enterprise in our country, so long as we continue to prosper, but it is to the London market that the Dominion and Provincial Governments, the great transportation companies, the large cities, etc., must come for money. If London discontinued, or even curtailed, the supply of funds to Canada, it would be for some good reason—a reason which would apply equally in the case of other money centres. But as a matter of fact, even to-day when our credit in London is high, it is "rubbish" to talk of Canada financing her requirements to any material extent in Paris or in New York; while if our credit were injured in London, it would be practically impossible to get money in either of the other two places.

Notwithstanding the fact that the progress and development of the Dominion of Canada have reached a stage which has aroused the wonder of the civilized world, Canadians are united in the belief that the development of their country is still in its initial stage, and therefore this motto should hang upon the walls of every office, business house and financial institution in Canada: "The maintenance of our credit in London is vital."

The outstanding feature of the Canadian-London financial year now ended was that for the first time Canada has been on the defensive with regard to her borrowings in this market. As the writer has said elsewhere, irresponsible statements were made to the effect that Canada had overborrowed in the London market, the cry was taken up, until both the press and the public generally were gloomily voicing their views on the subject. Still more serious was the fact that men in high financial places, without investigation, were shaking their heads and joining in the chorus.

It is gratifying to Canadians to know that there has been little, if any, ill-natured comment, but harm has been done nevertheless, and now that the ball has been set rolling we Canadians may be sure that it cannot readily be stopped. Certain Canadian loans have been open to severe criticism—a fact no one would attempt to refute. It is unqualified criticism which was uncalled for and to which we so strongly object. Little effort, if any, was made properly to analyze our borrowings, and therefore it followed that the criticism excited abounded in generalities, and was based on hasty conclusions and wrong premises. Admittedly, we have borrowed a vast sum of money from Great Britain: indeed, we have borrowed over a thousand million dollars in the past ten years, and it must be obvious to all that we cannot go on at the same rapid rate. The writer, for one, fervently hopes that borrowing on the scale of the past few years may not be necessary. Once the Grand Trunk Pacific, Transcontinental, and Canadian Northern Railways are completed from ocean to ocean, this, the most important class of borrower, will, if necessary, be able to modify his demands. Meanwhile, commitments in respect to railways, etc., are heavy, some wise people think regrettably heavy.

SIR FREDERICK TAYLOR.

Some Comparative Prices.

The following list of selected securities with comparative prices for the past five years, enables one to gauge not only the market trend, but shows how some of our leading Canadian stocks have maintained their place, as compared with others in the same class:—

	15th Dec., 1908.	15th Dec., 1909.	15th Dec., 1910.	15th Dec., 1911.	7th Dec., 1912.
BANK OF ENGLAND RATE	2 1/2%	4 1/2%	4 1/2%	4%	5%

Quebec 3%, 1937 Stock.	83 5/8	83 5/8	82 1/8	81 5/8	81 1/2

N.B.—Accrued interest deducted in each case.

Headed by Consols, the downward tendency in all high- lass securities referred to by the writer in the columns of *he Monetary Times* a year ago, has proceeded up to re- ently. Whether the bottom has been reached it is impossible say, but at the moment the decline has at least been rrested.

As compared with a year ago Dominion Government ock has dropped 2½ points against a fall in Consols of 1¾, nd in India stock of 9/16th of one point during the same eriod.

For the four previous years Canada stock had been won- erfully steady, varying only two points as compared with a ecline in Consols of 6⅝ points and in India stock of 4¾ oints. In looking for an explanation of the greater fall in anada stock during the past year than in the former years iven above, one finds that the decline is doubtless due, not fresh emissions made by the Dominion Government, as ey have been on the market only once in 1912, and that a edemption loan, viz., £5,000,000 3½% at 98, but largely to e competition of the Canadian Northern Dominion guar- nteed flotation of seven millions serling made at the close 1911. The market conditions were not very favorable hen this issue was made, money was tight, the Christmas olidays were close at hand, the amount was large, and three- nd a half per cents. were growing in disfavor. In conse- uence, the public response was small and the stock went to heavy discount, from which it has not recovered; the pro- ess of absorption by investors was slow, and it is doubt- l if the whole amount has yet found a permanent home. ost important of all, many holders of Canada stock natural- enough changed into Canadian Northern guaranteed, in rder to secure the advantage of a higher yield in a security equal merit, the disadvantage being a less free market nd the fact that the guaranteed stock is not a trustee secur- y, whereas the other is, as everyone knows.

nalysis of Individual Issues.

There has been only one direct Canadian provincial pub- c flotation in London during the past year, viz., province Alberta 4%, sterling debentures due 1922, £1,000,000 at , with a bonus of 13s. 10d. in the interest, making the net sue price £96 6s. 2d., and the cost to the province allow- g for expenses and redemption, about 4¾%. Alberta's pre- ous issue was in 1909, namely, 4% debenture stock due 1938, 411,000 at 99½. There were two provincial guaranteed is- ies in 1912, viz., St. John and Quebec Railway Company, uaranteed by New Brunswick 4% debenture stock 1962, 873,285 at 98½, with a bonus of 1s. 8d. in the interest, mak- g the net issue price £98 8s. 4d., and Edmonton, Dunvegan nd British Columbia Railway Company, guaranteed by Al- erta 4% debenture stock due 1942, £700,000 at 94½, with a onus of 4s. 4d. in the interest, making the net issue price 94 5s. 8d.

The four principal Canadian municipal issues of the ear were Winnipeg, Vancouver, Calgary and Edmonton. innipeg issued £960,000 4% consolidated registered stock April at 98, with £1 3s. 5d. bonus in the interest, making e net issue price £96 16s. 7d. This compares with their revious issue made in May, 1911, £900,000 at par. The city Vancouver issued £991,900 4% consolidated stock in arch, 1912, at 98, with 14s. 8d. bonus of interest, net issue rice £97 5s. 4d., which compares with their previous issue pril, 1911, £579,000 at par and a half. Calgary had two sues in 1912—one in February, £393,500 4½% debentures 101½, with 13s. 7d. bonus of interest, net issue price 100 16s. 5d. The second flotation was in July, £500,000 at , with 12s. 3d. bonus of interest, net issue price £98 7s. 9d.

City of Edmonton issued £595,100 4½% debentures in ine, 1912, at 99½, as against their previous issue made in ly, 1911, £302,000 at 103.

The Canadian Northern Railway income charge con- ertible debenture stock issue made in October was £2,057,- 2 5% at 106, with 14s. 5d. bonus of interest, net price 105 5s. 7d. This compares with a previous issue in April, 11, of £1,543,209 at 98, with 10s. 8d. bonus of interest, net rice £97 9s. 4d. The marked improvement in the issue rice in face of a decline in prices generally, reflects the rowth of Canadian Northern credit, but it should be noted at the recent emission is now selling at 3½ discount.

The Grand Trunk Railway has had two perpetual con- olidated debenture stock issues—one in April, £1,500,000 at 3½, with a bonus of 10s. 5d. in the interest, net issue price 97 19s. 7d., and one in December, 1912, £1,000,000 at 95, ith 5s. 11d., bonus of interest, net issue price £94 14s. 1d.

Canadian Pacific perpetual debenture stock, it will be oted, maintains its price exceptionally well, the decline in e year being 2¾ as against 2¾ in the case of the London nd North-Western stock, but a fall in the former of only ¼ in five years, compared with a fall of 9 in the latter in e same period.

Apart from possible borrowing by the Dominion Gov- rnment, which is in a class by itself, and to which no general marks can apply, the outlook for Canadian public issues during the coming year is not by any means clear. The criticism of Canada's so-called over-borrowing in London may—as before stated—easily be revived: in fact, it is not by any means stifled. The unfavorable factors are that money cannot well be superabundant owing to the unexampled activity throughout the world. Secondly, the list of would-be borrowers of all countries is longer than ever before. Then, unfortunately, our Canadian provinces and municipalities have some five million pounds of treasury bills afloat in London, which must be funded, apart from their other requirements. This is a large sum of money and all concerned will feel more comfortable when the total is on a permanent basis. Were it not for these treasury bills the situation would be greatly simplified.

It is to be hoped Canadian cities will profit by the experience of the past year and proceed cautiously as regards fresh commitments, remembering that they cannot secure money in London either as easily or as cheaply as in the past. It is now quite clear to everyone that the too-favorable terms secured in the past by some of our small cities has been disadvantageous in the end.

◆

ORGANIZING BOND AND STOCK BROKERS

A call is being sent to brokers throughout the United States and Canada to attend the organization meeting of the proposed International Association of Brokers, which will be held either in Chicago or New York on February 20, 1913.

Security dealers doing business on a capitalization of $5,000 or over will be admitted to membership in the proposed organization, and the first 400 to send in membership applications will be enrolled as charter members.

The organization will have for its purposes the banding together of the brokers in the United States and Canada for freer discussion of matters of mutual interest and concern; enlarging the field in which its members may seek to do business; aid by its influence and advice in securing the enactment of such legislation as will tend to specifically prohibit the floating of any financial proposition that is not sound, and by doing so at least help in a measure to protect the members and the investing public from questionable or unsound corporate promotions; to discuss and offer for legislative remedy such recommendations as the association may deem advisable; lend the voice of the association to secure either the passage or defeat of measures relating to investments, and work for the establishment of a national bureau of investigation for all corporate promotions, which shall report favorably upon any proposition before it shall be recommended to the members of the association or the public at large. Several thousand letters have been sent to the members of the profession and a large number of replies have been received. It is anticipated that 500 men, at least, will be at the opening meeting. Mr. J. N. Sechrest, of Buffalo, is acting chairman of the organization committee.

◆

Sir George Paish, discussing the New Year prospects and outlook, after referring to the financial stringency of Austria-Hungary and the uncertainty of the situation in the dual Monarchy, says:—"Never has the state of our own country been more satisfactory. Credit is thoroughly sound, and the public is prepared to enter upon every promising kind of new enterprise. The wealth of the country has so augmented that resources for vast new undertakings are ample. Looking next across the Atlantic, we see there all the signs indicating that the American people are prepared for an outburst of new enterprise, which is likely to prove all the greater and more impetuous because of the length of time it has been delayed. The accumulation of gold is enormous, and the augmentation in the general wealth immense. Just for the moment it it too stringent, but that is due in the main to the vicious treasury system of the United States. The government refuses to keep banker. It locks up, therefore, its unused moneys in the treasury, and thereby starves the trade of the country. The tightness of New York could be ended immediately if the secretary of the treasury let out ten to fifteen millions sterling of unused funds."

BOND INVESTMENT SITUATION MAY CHANGE

Bond With Stock-Bonus Fashion May Change, Thinks an Expert—Dearer Money Will Affect All Securities

BY N. W. HARRIS.

The general interest in Canada by people of the United States has grown very large in the last few years, and business relations between the two countries are probably greater than at any time in the past. My company's experience in Canada has extended over quite a period of time, and it has probably loaned a larger sum in the Dominion than any other United States banking house. The growth of the Canadian Northwest is a subject of general knowledge and of praise for the energetic men who have brought about this great expansion.

An advantage, which Canada has in its growth, over the United States is that immigrants into Canada are a far better class of people than the immigrants into the United States, there being comparatively few new comers from among the ignorant classes of Southern Europe; also, large numbers of well-to-do United States farmers have been crossing the line each year to take up virgin lands of the Canadian West.

In looking at the cities of Canada as a whole, the prospects of the larger cities are of the best, as instancing—Vancouver on the Pacific which is the one large western seaport at the present time and which has shown phenomenal growth in the last few years; Winnipeg, known as the Chicago of Canada, which is the centre of trade and commerce of the vast agricultural areas surrounding it; Toronto, which is the centre of commerce and industry of what might be called the eastern middle territory; and Montreal, the great eastern metropolis which seems destined to remain the New York of Canada. It is interesting to note that during the past ten years Montreal has grown in population faster than any city of its size in North America. Quebec has not grown as fast as the other cities, but is showing a steady and healthy expansion in population and wealth. The two cities of St. John, New Brunswick, and Halifax, Nova Scotia, seem to be having a new era of prosperity, and it is my opinion that they will regain their past importance as commercial centres they both having shown a marked increase in activity during the last year or two.

Finances of Canadian Municipalities.

In looking at the finances of Canadian municipalities I notice as I write these words at the beginning of November, that in some instances bonds have been authorized for band stands and skating rinks, which would hardly be called conservative, and an United States banker cannot but be impressed with the enormous growth of the city debts (of the western cities especially). When an examination in detail is made of their financial situation, it would seem as if borrowing of this kind had already reached the limits of conservatism.

As an example a western Canadian city in 1911 had an assessed valuation of upwards of $52,000,000 and a strictly city debt, omitting the debt created for the purpose of owning so-called public utilities, of $7,250,000, and the city had a population at that time of 43,000. One of the newer cities of the United States, the same year had an assessed valuation of but $95,000,000 and a straight city debt of $2,500,000, the population being approximately 64,000. The percentage of strictly city debt to the assessed valuation in the case of the former was 13.7 per cent., and in the case of the latter 2.6 per cent. In the former, the per capita net (strictly city) debt was $165.89, while the per capita debt of the latter was $39.42. The per capita valuation in the western Canadian city is $1,206.90, and the United States city $1,482.28, showing that the wealth per capita as given is about the same, whereas the per capita debt shows a very marked difference.

Canadian municipalities in general have been fortunate in being able to realize for the last few years much better prices for their securities than has been the case in regard to United States municipal bonds. As an indication of this, the investor pays about the same price for the bonds of the Canadian city I have noted as for those issued by the United States city. There are indications that Canadian municipalities will have to pay more for their borrowed money in the future than in the past.

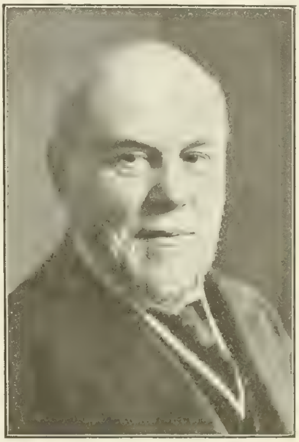
Some cities are now resorting to short time borrowings expecting to receive a higher price for their securities within the next six months or so. I do not think their hopes will be realized for, as money tends to seek the same level throughout the world, Canadian cities and industries cannot be expected to borrow money on the same security much more cheaply than other municipalities and corporations equally well favored. In the present case this is especially true by reason of the fact that there have come to my notice over $50,000,000 of Canadian municipal bonds which have been authorized and are ready for sale but are being held back hoping for a more favorable turn of the market.

Canada has been going through a period of merging of corporations of all kinds for the last few years such as we in the United States experienced ten years ago, and as a result many companies are probably over-capitalized and have discounted the future to a greater extent than is warranted by conditions.

The Canadian investing public have been purchasing bonds and stocks with a bonus of junior securities and have doubtless considered these securities on a high investment plane whereas, in some instances at least, the securities offered to the public have, in my opinion, been of a somewhat doubtful nature, and it is my expectation that there will be a substantial change in the investment situation in Canada within the next five years.

Merits of Bonds and Stocks.

Where a man who wants an investment will now buy a bond with a stock bonus, he will in the future buy a more stable security in the form of a bond without a bonus, and when the individual wishes a high return with a commensurate risk he will confine himself to stocks alone. In other words—money has been raised in the past by issues of bonds on situations which should have been financed by the issue of preferred and common stocks.



N. W. HARRIS.

I cannot refrain from commending the banking system of the Dominion which, among its many good points, provides a system whereby money can be loaned through the branches of the great banks in every town and hamlet throughout the Dominion so that the deposits taken in any section can be used throughout the whole country and legitimate commercial borrowing can be done at reasonable rates in almost every section and without the necessity of paying abnormal and excessive rates during times of unrest or financial panic. The big banks have had a salutary effect on curbing real estate speculation during the past year, and it is to be hoped that their influence in this direction will be continued.

In my opinion, what Canada needs the most at the present time is continuous and steady application to the solving of present day problems and of working solely and steadily on the upbuilding and strengthening of present commercial and financial affairs rather than reaching out for new fields and opening up new territory. Canada will undoubtedly have periods of prosperity and periods of depression such as the United States have experienced in the past, but over a long period of time Canada will enjoy prosperity which has seldom been surpassed resting as it does on natural resources, the fertility of the soil, geographical advantages and their optimistic industry of her people.

The year closed with call money lending freely at 4 and 5 per cent. in Wall Street. A few loans were made around 6 per cent., but most of the money was put out under 6. Very little money was loaned for interior banks, and borrowers on call and on time had no difficulty in securing all the money they needed at the quoted rates.

INDUSTRIAL MERGER WAS DECLINING FACTOR

Comparatively Few Amalgamations Were Negotiated—Watered Securities of Previous Years Necessitated Several Reorganizations — Few Issues to the Public Last Year — First Combines Decision.

THE number of industrial mergers negotiated from January, 1909, to date was 56. The aggregate authorized capitalization, including bonds, of these mergers, was $456,938,266. The 56 amalgamations absorbed 248 individual companies. The aggregate capitalization of 206 of these individual companies was approximately $167,289,182, which amount in various ways was increased upon amalgamation. The 40 securities issues to the public, resulting from the amalgamation movement, totalled $57,346,666. With 16 of these, amounting to $16,500,000, an aggregate bonus of $6,750,000 was given. The largest consolidation was the Canada Cement Company, which absorbed twelve companies. Its authorized capitalization, including bonds, amounted to $38,000,000.

Amalgamation, the new economic factor which appeared to a marked degree in Canadian industrial spheres three years ago, and which was in strong evidence during 1911, became a less important feature last year.

An accompanying table gives some details of the most important mergers of 1912, for which figures are available. fourteen, with aggregate capital of $85,000,000, absorbed 48 individual companies, the capital of 38 of which was $35,982,600. That amount was by divers means increased upon amalgamation. Comparatively few merger securities were offered to the public last year. They totalled $13,275,000, as the accompanying table shows. With three of these amounting to $550,000, an aggregate bonus of $182,500 was given.

The above figures do not include the snare exchanges negotiated in the cases of the Richelieu and Spanish River mergers. The Riordon Pulp and Paper Company also issued stock and bonds in Canada and England. That company was an amalgamation of 1910.

The number of industrial amalgamations consumated in Canada from January, 1909, to December, 1911, was 42. The aggregate authorized capitalization, including bonds of these mergers, was $371,938,266. The 42 amalgamations absorbed 200 individual companies. The aggregate capitalization of 168 of these individual companies was approximately $131,306,582, which amount, in various ways, was increased upon amalgamation. The 28 securities issues to the public, resulting from the amalgamation movement, totalled $44,071,666. With thirteen of these, amounting to $15,950,000, an aggregate bonus of $6,567,500 was given. The largest consolidation was the Canada Cement Company, which absorbed twelve companies. Its authorized capitalization, including bonds, amounted to $38,000,000.

The capitalization, and in that connection the issue of securities to the public, is perhaps most liable to abuse by self-interested promoters. The accompanying tables show the capitalization including bond issues of the mergers and the capitalization of the individual companies absorbed. In most cases the aggregate capital of the former is in excess of the latter. Good reasons have sometimes been advanced to account for that fact, but this is a phase of the amalgamation movement concerning which by no means sufficient information has been given by the average merger promoter. Making allowance for various considerations, the capitalization of the mergers still appears to be larger than that of the contributing corporations.

Investment offerings with a common stock bonus have found favor in Canada and the United States. In the case of thirteen of the twenty-eight combine securities issues to the public in Canada there was an aggregate of $15,950,000 bonds and stocks sold. With that amount, the bonuses, varying from twenty to seventy-five per cent., totalled $6,567,500. Of that sum, $4,317,500 represented common and $2,250,000 preferred stock.

The taste for a bonus may be because the American thoroughly enjoys the speculative element. He loses on one, confident that the succeeding will bring gain. In his own words, he is fond of taking a long chance. The British investor eyes with suspicion an ordinary stock bonus tied to a bond issue. He is more conservative and may lose something thereby. In the end he gains most confidence and probably ends life the more rich. One thing assured is better to him than two things doubtful.

Preferred issues usually meet with a good reception in Great Britain, and it is a poor policy to bait the market with common stock. Most of those interested in finance who have visited London recentlly have heard that criticism.

After allowing for money required for extensions, reorganization, new factories, etc., one must conclude that a proportion of the securities issued by the mergers has been what is popularly known as "water." Although many companies have not issued securities to the limit of authority granted them, their power to place bonds and stocks upon the market in future may extend far into the next decade. If stock and bond issues of the amalgamations are forced into domestic and other markets, with an appetizer in the shape of bonus, there is likelihood of protest on the part of the public. This is especially so in the London market, where the securities of several Canadian mergers have been floated, and are likely to be sold in the future. The investor will regard favorably the stocks and bonds of a consolidation conservatively planned, and financed without an ill-concealed effort to market practically useless and valueless securities.

The most important amalgamation last year was that of the Steamship Companies on the Great Lakes. The Niagara Navigation Company, Limited, sold to the Richelieu and Ontario Navigation Company, Limited. Shareholders of the former company had the privilege of accepting payment of $200 in cash or in shares of the Richelieu Company, at $1.20 per share. In other words, five shares of Richelieu were given in exchange for three shares of Niagara Navigation. The Richelieu Company had previously acquired control of the Northern Navigation Company, Limited, by the purchase of 9,648 fully-paid shares of the capital stock.

It is generally understood that the Richelieu has now absorbed the Niagara Navigation Company, the Northern Navigation Company of Ontario, the Inland Lines, the Turbine Steamship Company, the Hamilton Steamboat Company, the Thousand Islands Steamboat Company, the St. Lawrence River Steamboat Company, and several smaller concerns. It was stated last summer that Messrs. Furness, Withy and Company had acquired a one-sixth interest in the Richelieu and Ontario concern, while it was later asserted that the Furness interests had increased their holding, a large proportion of the sales effected in Montreal having been purchased on behalf of the English undertaking.

The effect of the amalgamation was to place under one control an important branch of the Canadian shipping industry, while the excessive competition which previously existed has been eliminated.

A clear route is established through all the Great Lakes from the head of Lake Superior to Montreal, where the agricultural produce of the West and North-West will be transhipped to the Furness steamers and brought across the Atlantic to Liverpool, Manchester, and Hull. The new arrangement will also, it is believed, prove a powerful factor in the competition between Canadian and United States ports for the control of the grain traffic.

The Northern Ontario Light and Power Company was formed to take over the assets of the companies named in the accompanying table, and the lighting business of Haileybury and New Liskeard, and was made sufficientlly large to include other concerns later.

The British Columbia Breweries, Limited, was formed in October, 1912, to take over a company which was incorporated (under the same title) in February, 1911, and which acquired and has since operated the following breweries in British Columbia: Vancouver Breweries, Limited; Canadian Brewing and Malting Company, Limited; Union Brewing Company, Limited; Pilsener Brewing Company, Limited. The acquisition of the above companies carries with it the control of all important breweries in British Columbia, with the exception of a company operating in Victoria, which it is proposed to acquire The company controls between fifty and sixty leases of licensed houses in Vancouver, over 70 per cent. of those existing, so that it holds a strong position as regards possible competition, practically controlling the trade in Vanoouver. The company also controls a great portion of the trade on Vancouver Island, with a large trade assured in the interior and the Northern Coast of British Columbia. There is no local option in British Columbia.

The holders of Smart Bag Preference shares received $600.000 of preference shares in the new company, Smart-Woods, Limited, divided share for share according to their respective holdings, while the holders of the $450.000 Smart Bag common stock received $900,000 of Smart-Woods common stock, one share held. In addition to this, $210,000 of the 7 per cent. cumulative preference shares of the Smart-Woods, Limited, were offered at par to the Smart Bag shareholders, at the rate of one new for each five old. Subscribers to this new preference stock received a bonus of the preference subscribed to by them. This meant that a holder of fifteen shares of Smart Bag had the right to subscribe to three shares of preference stock at par, carrying a bonus of one share of common with it.

Shingles and Clay.

The Metal Shingle and Siding Company, Limited, of Preston, Ontario, absorbed A. B. Omsby, Limited, and took over the Canadian patents and interests of the United States Metal Products Company, of New York, the latter company installing a complete plant for the Metal Shingle Company for the new lines which they intend to manufacture. A Boston house sold the $500,000 7 per cent. preferred stock of the company.

The Nova Scotia Clay Works, Limited, absorbed a large number of clay properties throughout Nova Scotia. The company built a modern plant at Annapolis, with a capacity of 10,000,000 for seven months. Extensive improvements and additions will be made at all of the company's plants for the season of 1913. Farm tiles and hollow blocks will be manufactured, and steam shovels, loading conveyer belts, and power vessels will be bought for the coming season. The chief advantages of the amalgamation are said to have been increase of production, quicker deliveries, greater uniformity, and better quality of manufactured goods.

Cassidys', Limited, generally thought to be a merger of crockery and glassware firms, or at least to have an understanding with other houses in the business, purchased the F. Buscombe and Company, Limited, of Vancouver, a wholesale and retail crockery and glassware establishment.

The amalgamation of the two Grand Falls Power companies near St. Andrews, N.B., will mean considerable development. Sir William Van Horne is interested in these powers, which will be used for pulp and paper mills.

Natural Gas, Paper and Pulp.

The Union Natural Gas Company acquired the franchises of a large number of natural gas companies in Ontario. The franchises acquired are in the following municipalities. Tilbury East Township, Raleigh Township, Harwich Township, Blenheim, Romney Township, Tilbury North Township, Tilbury West Township, Rochester Township, Maidstone Township, Sandwich South Township, Sandwich East Township, Sandwich West Township, Essex, Belle River, Comber, Dover East Township, Chatham and North Gore Township, Moore Township, Enniskillen Township, Camden Township, Dresden, Howard Township, Oxford Township, Highgate and Kingsville.

The Dominion Bond Company purchased the wholesale grocery business of the [illegible] Macdonald Company of Winnipeg. The same financial house may acquire other and similar companies.

In the case of the Spanish River Ontario Pulp merger the stock of the latter was exchanged for that of the former on a basis of three shares for two.

One of the largest business transactions in the history of New Brunswick was closed last year when deeds for the property of the Gibson Lumber Company were transferred to the Edward Partington Pulp and Paper Company, Limited, while the amount involved is said to be over two million dollars. The property includes extensive lumber limits and licenses, as well as mills, logs and lumber.

The Mooney Biscuit and Candy Company of Stratford, Ontario, absorbed the Lang Manufacturing Company of Montreal last year. The details are not yet available.

A report was heard last year that a large number of milling companies of Ontario would combine interests. Early this year a merger of timber properties in British Columbia will be negotiated.

Gilt of the Merger.

The results of many of the combines consummated during the past few years have been far from satisfactory. The financial gilt on the merger gingerbread has not proved as sweet as many promoters, financiers and professional combine makers had imagined it might be. Since 1909 several amalgamations, large and small, have come to grief, resulting in disappointment and loss to shareholders, the arousing of further suspicion in the mind of the public regarding such corporations, and an undesirable publicity for Canadian securities.

The most notable breakdown last year among the combines of Canada was that of the Amalgamated Asbestos Corporation, Limited. Drastic action was taken by the directors, and a bondholders' committee was appointed to save the company from complete disaster. A new concern, the Asbestos Corporation of Canada, was formed, and the old company's properties were purchased. The capital was $7,000,000, divided as follows: First mortgage forty year 5 per cent. bonds, $3,000,000; 6 per cent. preferred participating stock, $4,000,000; common stock, $3,000,000—total, $10,000,000. This compares with a stock and bond capitalization of $25,000,000 of the old company.

In submitting their reorganization scheme the bondholders' committee pointed out that it was evident from the operations of the company that the original capitalization, involving a fixed charge of $400,000, was excessive. The average earnings for a period of three and a half years were not less than $250,000, and under normal conditions the company should exceed this. The plan of reorganization suggested was the formation of a new company, with a capitalization of $5,000,000 bonds, of which $2,875,000 were issued at the outset, $4,000,000 of 6 per cent. participating preferred stock, and $2,875,000 common stock. Under this plan the holder of $1,000 par value old bonds receives $250 new first mortgage bonds, $500 new 6 per cent. preferred stock, and $250 new common stock. To provide cash working capital it was proposed to sell $875,000 new first mortgage 5 per cent. bonds. The annual statement for 1911 showed that the profits for the year were only $98,003, against a bond interest of $400,000, unfavorable conditions in the trade, and the unsatisfactory result of certain contracts telling heavily against the company.

Another Asbestos Reconstruction.

The Black Lake Consolidated Asbestos Company was another concern which encountered financial difficulties, and was reorganized last year. A new company, the Black Lake Asbestos and Chrome Company, Limited, was formed, with bonding powers and capitalization as follows:—

Six per cent. income bonds (to be issued bond for bond to holders in the old company)	$1,250,000
1st mortgage 6 per cent. bonds (to be held in treasury)	250,000
Preferred stock	1,000,000
Common stock	3,000,000
	$5,500,000

The capital stock and bonds of the old company were as follows:—

	Authorized.	Issued.
Bonds	$1,500,000	$1,230,500
Preferred stock	1,000,000	1,000,000
Common stock	3,000,000	3,000,000
	$5,500,000	$5,230,500

Milling Company Refinanced.

The Canadian Cereal and Milling Company, which at one time was a part of the International Milling Company of Moose Jaw, found it necessary to reorganize in 1912. A new company, the Canadian Cereal and Flour Mills, Limited, was formed. Additional working capital, by means of the issue of $250,000 7 per cent. cumulative preference shares. The new company was given the following capitalization:—

Stock.	Authorized.	Issued.
Preferred	$2,000,000	$750,000
Common	$2,000,000	$750,000
	$4,000,000	$1,500,000

This compares with $8,000,000 capital of the old company, the assets of which have now been transferred in consideration of $500,000 preferred shares of the new company. The ordinary shares were used as a bonus to the underwriters in consideration of their taking $250,000 of preferred at par.

Hit the British Investor.

The Dominion Sawmills, Limited, a merger of timber properties of British Columbia, was also reorganized last year. The company's bonds were practically all held in Great Britain. A public issue of £1,027,500 7 per cent. participating cumulative preference shares at 97½ was made in the London market in July, 1911. In the scheme of capital reconstruction of this company the existing 6 per cent. first mortgage debentures, of which there were outstanding £930,000, part of a total of £1,000,000, were exchanged for an equivalent amount of 5 per cent. debenture stock in the new company, to be known as the United Sawmills and Timber Company, while a bonus of three fully-paid $1 shares in respect of each £20 of debentures—say, 15 per cent.—were also allotted.

The $2,000,000 of cumulative 7 per cent. participating $100 preference shares were replaced by an equivalent amount of 6 per cent. income debenture stock, together with a bonus of 4 per cent. in fully-paid $1 shares of the new company. The $4,201,200 of $100 shares exchanged on the basis of six new fully-paid $1 shares in respect of every $100 share now outstanding.

Details of this reorganization appeared in The Monetary Times of August 3rd, 1912. The capital of the old company

(Continued on Page 84).

(1) Approximate amount. (2) The assets of the old companies taken over by the Maple Leaf Milling Company, as above, stand in excess of all liabilities and without any allowance for value of goodwill, trade marks, etc., at $3,770,524, this amount being ascertained on the basis of an appraisal by the Canadian-American Appraisal Company, Limited, as of March 17th, 1910, of capital assets taken over, and the certificate of Messrs. Price, Waterhouse & Company as to current assets and current liabilities as of February 28th, 1910, with a liberal allowance for all contingencies. There has also been placed in the treasury $1,000,000 of additional cash, which besides permitting of the completion of a 6,000 barrel mill and a 1,000,000 bushel elevator, and storage warehouse at Port Colborne, and of fifteen additional elevators in the West, will provide the new company with further working capital. (3) Partnership. (4) Later absorbed by Steel Company of Canada, Limited. (5) Woodworking machinery department only taken over. (6) Mr. Hopper, it is understood, was interested also in the Standard and Dominion Properties. (7) Stock held privately. (8) The Dominion Steel Corporation is not a merger in the strict sense of the term (see reading matter accompanying these tables). In addition to the £1,200,000 issue of Dominion Iron and Steel Consolidated five per cent. bonds, £1,027,500 Consolidated five's were issued in security for purchase money of Dominion Coal Company's Stock. Of the authorized issue of $20,000,000 Consolidated Mortgage five per cent. bonds, $7,492,000 is set aside to replace the amount of First Mortgage Bonds outstanding at date of the issue of the consolidated bonds. (9) These bonds were issued in January, 1912, to the Dominion Steel Corporation in exchange for $3,500,000 preferred stock of that Corporation.

INDUSTRIAL MERGER WAS DECLINING FACTOR

(Continued from Page 77).

was $5,000,000 7 per cent. participating cumulative preference shares, $5,000,000 ordinary shares, and £1,000,000 6 per cent. first mortgage debenture bonds.

Squeezed Out the Water.

Two of these four reorganizations resulted in wiping out stock and bonds, mostly "water," aggregating $19,000,000, as the following table shows:—

Company	Capital of combine.	Capital of reorganized company.
Amalgamated Asbestos	$25,000,000	$10,000,000
Canadian Cereal	8,000,000	4,000,000
	$33,000,000	$14,000,000

Canada Machinery Corporation.

Reorganization of the capital of the Canada Machinery Corporation was concluded in November. All the $908,800 preference stock outstanding was retired, and in exchange for it was issued new common stock, in the proportion of nine shares of new common for every ten shares of preferred held. Thus the total capital of the reorganized company will be approximately $1,200,000, all common stock. Interest at the rate of seven per cent. has been paid on the preferred stock, the interest amounting annually to about $63,000. On the new common stock this will amount to a little more than five per cent.

The capital of the company was originally as follows:—

Common stock	$1,500,000
Preferred stock	1,500,000
Bonds	1,000,000
	$4,000,000

Among the objects and advantages to be gained by consolidation, the following are cited by the promoters:

The standardization of brands.

Elimination of needless competition.

Obtention of further working capital.

Prevention of increase in prices to the public.

To keep pace with the growing market demand.

Elimination of a large amount of freight charges.

Savings from the concentration of the executive force.

Economies in the purchasing, manufacturing and selling departments.

The obtention of branches of the one company in various parts of the country.

Specialization of various plants, dispensing with unnecessary duplication of output and patterns.

Although naturally enough, the fact that companies have found themselves in a critical condition, is not stated by promoters as a reason for consolidation; this may have been the real cause in some cases. Keen competition, bad financing or disaster on the part of one company might be met by being swallowed by a combine.

First Case Under Combines Act.

Only one case has been brought under the Combines Act of Canada. That was begun late in 1910 against the United Shoe Machinery Company of Canada, who were alleged to be acting in restraint of trade. This company is a branch of the United Shoe Machinery Company of the United States, which supplies manufacturers with machinery on a lease basis, getting a certain percentage of the price of every shoe sold. Manufacturers in Toronto and the Maritime Provinces have said that they are satisfied with the arrangement, as the "royalty" was not too onerous and they were enabled to do business on a small capital. Some Quebec manufacturers were said to have been suffering from the strain of competition, and they had the law put in motion.

In November, 1912, a majority report signed by Judge Laurendeau and Mr. Walsh, and a minority report signed by Mr. White, were handed to the Minister of Labor at Ottawa respecting the investigation of the United Shoe Machinery Company of Canada. The majority report acknowledges that the company does business in a fair, honest and honorable way, that its machines are the best on the market, that the service given by the company to its customers is excellent, and there is no finding that prices have been enhanced and that trade or commerce has been in any way injured. but the majority of the commissioners find that the company is a combine, which unduly prevents or lessens competition in the production, manufacture, sale and supply of shoe machinery. They recommend that, under the circumstances of the case, instead of giving ten days to the company to make any change that it thinks necessary in its way of doing business, it be given six months from the date of the publication of the report in the Canada Gazette.

INDUSTRIAL MERGER WAS DECLINING FACTOR

(Continued from Page 84).

The minority report, signed by Mr. White, finds that, according to the evidence adduced, the price of boots and shoes has not been enhanced by the use of the machinery of the company, that the price of the machinery itself has not increased, that as far as competition is concerned within the last five or six years a number of new shoe manufacturers have established themselves in the country and that the field was open to any new shoe machinery company which might either manufacture or sell machinery in Canada. The minority report goes on to say that as from the evidence adduced nobody, neither consumer nor producer nor the wearer of shoes having been damnified, it cannot be said that competition has been unduly lessened.

In view of the facts that two prominent mergers defaulted on bond interest; a second failed to declare the dividend on preferred stock; a third earned, during its second year, half a million dollars less than the estimated earnings, and several found reorganization necessary, merger promoters may again figure the following as certain factors in the situation:—

1.—More information than hitherto afforded as to the past history and actual earnings of companies absorbed, must be given in the prospectus.

2.—The investor must know what was paid for the properties acquired by the consolidated company, and whether the consideration was cash, stock, bonds, or all three.

3.—Greater discretion and conservatism must be used in estimating the economies likely to accrue from amalgamation.

4.—Capitalization must be based upon the cost of acquiring properties, real assets, a reasonable amount for future development, and legitimate profits to promoters.

5.—Capitalization should be such as to enable the predicted dividends to be paid even in times of moderate trade depression.

The outlook generally is for the formation of fewer industrial combines in Canada than in the past few years. One or two large mergers are likely to be effected during 1913, notably the further amalgamation of several important pulp and paper companies. There may also occur an amalgamation of certain steel companies, although that possibility is not in the near future.

BONDS, BILLS AND BROKERS

Experiences of the Past Twelve Months—Complexity of the Situation—Outlook Seems to be Clearer

The bond market during the past year experienced many vicissitudes. While opening with fair prospects, the depression in London brought a smart decline. Many reasons for the depression were given such as (1) an over-crowded market; (2) many of the lesser municipalities have obtained their money too cheaply; (3) overborrowing; (4) some indiscreet issues. While this depression lasted short term loans and treasury bills were frequently adopted to obtain money. Then towards the close of the year came the period of tight money, until complaints were general. Municipalities suffered, many not receiving one bid where usually five or more tenders were considered.

Political differences in England, presidential elections in the United States, the Balkan war, all added their quota to this disturbed financial area, so that experts would not risk their reputations in making any forecasts. "It may go either way," was a frequent phrase. Bulls and bears were on an equal footing.

London Market Was Affected.

The opinions of those in closest touch with the bond market should prove of interest and value: Generally speaking, the most noticeable feature in connection with the bond market has been the severe decline in price for government and municipal issues, due to the fact that Canadian cities and municipalities have been over-borrowing, states the Royal Securities Corporation, Limited, and the London market which absorbed these issues, has declined to take them, except at much lower prices. As a consequence, many Canadian cities and municipalities have negotiated short term loans and treasury bills at high rates of interest.

As a whole, corporation issues have been in fair demand throughout the year, and prices have held fairly steady, although there is a tendency on the part of the investing public to demand somewhat higher rates than formerly.

Development of Western Provinces.

There is one feature which has for years affected the market for municipal debentures adversely, and is likely to in a greater degree for many years to come. This is the large volume of mortgages which are available in the West to yield from 7% to 9%. This is absorbing millions of money which otherwise would have been put into debentures, is what another bond house suggests.

Insurance companies, loan companies, trust companies, and some private individuals are placing their money in the West at these high rates, and as a result the demand for municipal debentures in Canada is considerably less than that which has prevailed in former years.

These conditions are likely to continue for some little time, and it is imperative that we obtain more and more money from abroad, not only upon our city debentures, but also upon those higher yielding bonds which formerly have found their market almost exclusively within the confines of the Dominion of Canada itself.

It is encouraging to note that the foreign demand for higher yielding bonds is increasing, and the difficulty which has been experienced by cities like Toronto and Montreal is due to a considerable extent to this very fact.

Hints and Suggestions to Larger Cities.

Matters of finance are exceedingly complex and it rarely happens that any situation can be explained through one or two factors.

The above suggests only one or two influences which have been at work to lower the prices of debentures, and to bring the income from them to a much more satisfactory basis, from the standpoint of the investor, and a much less satisfactory basis from the standpoint of the municipality.

Municipalities will, it seems, for some time, be called upon to pay higher for their borrowings.

The higher cost of living has had its effect in that it is forcing those dependent upon the income from their investments to buy mortgages or debentures which yield a higher income than city bonds. As a result, mortgages, corporation and industrial bonds, and Western municipal debentures have been popular among private investors who formerly have been content with debentures of larger cities.

Montreal, Toronto, Winnipeg, Vancouver, and other cities may decide to pay more for their money in future, but in these matters some important feature may appear on the horizon which will change the financial aspect.

Money has been exceedingly tight, but if the war cloud passes, no doubt financial matters will improve and bonds will bring a better price, is the opinion of Messrs. H. O'Hara and Company.

Cities like Toronto should do their business at home, and put the bonds up for tender and receive tenders like other municipalities, instead of taking them abroad, like Toronto has seen fit to do, and which has caused one of the main difficulties in connection with obtaining money in London.

◆

PROSPERITY AND A POSSIBLE CHECK

Municipalities Should Not Undertake More Improvements Than Can be Easily Financed

BY SIR WILLIAM WHYTE.

The Dominion of Canada is experiencing marvelous expansion and prosperity, the result of the large increase to its population from immigration and the construction of many hundreds of miles of railways annually to furnish new districts and settlements with railway facilities. These new settlers have to be fed and clothed, as also the army of men employed in the construction of railways. To supply these necessities the manufacturing establishments in Eastern Canada are kept busily employed. The material required in the construction and equipment of the new railways is also largely manufactured in Eastern Canada; therefore, so long as the immigration keeps up, it is reasonable to assume that this prosperity will continue.

Sir William Whyte.

The only cloud on the horizon that might interfere with this continued prosperity, is the possibility of cities, towns and municipalities undertaking more improvements than can be easily financed. Should such an eventuality occur, and the army of men that are now employed throughout the West in the construction of sewers, water mains, street paving, electric lighting, etc., be thrown out of employment, it might check the prosperity pervading the whole Dominion. My reason for giving this hint is, that in a great many of the cities and towns the council has some members who are interested in real estate and in consequence are apt to recommend the expenditure of large sums of money for the pavement of streets, sewers, water connections, etc., etc.

NEW BOND LISTINGS AT NEW YORK

Bonds played an important part last year in the new listings on New York Stock Exchange. The total securities were $1,720,292,470. This is approximately $500,000,000 more than the total listings for 1911, $100,000,000 more than for 1910, but $700,000,000 less than for 1909. Previous to that, one has to go back to 1901 to find another larger listing year than the past one. Popularity of the cumulative preferred stocks is shown by the fact that there were one and one-half times as much stocks as bonds listed on the exchange last year. In only one year of the past twelve has this proportion been exceeded. The following table shows an interesting relation between the stocks and bonds listed in the past three years:—

	Bonds.	Stocks.	Total.
1912	$682,385,350	$1,037,907,120	$1,720,292,470
1911	563,503,500	655,360,375	1,218,872,875
1910	685,688,000	955,626,390	1,641,315,100

HALF OR ONE PER CENT. CARRIES DAY

Other Considerations Than Sentiment Apply to Canada's Borrowings Abroad

BY J. G. COLMER, C.M.G.

Fairly steady, but dull, are the words which best describe the Canadian section of the British financial market during the year 1912. Canadian issues, except those of the best, have not been much encouraged. The year opened with underwriters rather full of undigested securities. And they, as well as the public, were not running after Canadian investments. In consequence, most of the offerings that were made met with only partial success, and the amount of unabsorbed stock received additions. And further, the general uneasiness, the high rates for money, and the complications in the Near East did not encourage new flotations.

It is difficult to give any satisfactory reason for the falling off in the interest in Canadian financial requirements. Canada is no less popular than it has been for many years. There is no general feeling that the value of the security has fallen off in any way. But it cannot be denied that people in financial and general circles have been "talking" about Canada. One hears in one quarter that Canada has been going ahead rapidly, and that the borrowings have been too frequent, and so large in amount. In another quarter, it is said that the trade returns show an adverse balance—the imports being larger than the exports—and so on. All these things are capable of satisfactory explanation: but it is common knowledge that when adverse rumors are set going, they are bound to have some effect—at any rate, for a time; for there is no more timid person as a rule than the investor.

J. G. COLMER, C.M.G.

Half or One Per Cent.

Canada is enjoying such prosperity locally, and is advancing with such rapidity in every direction, that she is bound to take her place again among the favorite borrowers before long. Higher rates may have to be paid for loans in the near future, and both larger and smaller corporations seem to be discussing the matter from that point of view. The contingency appears to be inevitable. Other borrowers in different parts of the world are offering better rates than Canadian borrowers have been paying. Sentiment is good up to a certain point, but there are other considerations as well, and an additional half or one per cent., if there is apparently nothing wrong with the security, will usually carry the day.

The outstanding feature in the situation is that Canada is becoming better known in the United Kingdom. The same remark applies to Canadian securities, whether government, municipal or industrial. And, what is even more important, there is greater knowledge than ever of the great sources of wealth of various kinds with which the Dominion has been endowed from the Atlantic to the Pacific. It cannot be denied also that the extent of the travel between the United Kingdom and Canada is expanding every year.

Place Among the Nations.

Large numbers of people, distinguished in politics, in commerce, and in other walks of life are making a practice of visiting the Dominion in increasing numbers. They are not only investing money, but are collecting information, which they disseminate on their return home. All this helps to popularize the country. The important part which the Dominion is taking in Imperial questions is also not without its effect; and the magnificent offer of Canada of a contribution to the defensive forces of the empire is attracting attention wherever the British flag flies, and elsewhere. All these things must be a matter of gratification to Canadians, and are evidences that she is slowly but surely taking her place among the nations that count in the world.

◆

WESTERN MUNICIPAL BOND SITUATION

Adjustments to Meet Existing Monetary Conditions—Cost of Living a Factor—Expenditure Should be Confined to Necessities

BY F. J. JAMES.

Western Canada has again been a heavy borrower on debenture account, but this must continue so long as the immense amount of municipal improvements are rendered necessary by the influx of settlers who cannot now be counted by the thousands. For this reason alone we are unable to say that the West's demand for money is unnatural or unreasonable.

The market for municipal bonds was not as active as it was in 1911, and a distinct dullness has been in evidence for several months past. Towards the close of the year evidences were not wanting to indicate that many Western municipal officials were following the example of the Eastern cities and towns in the matter of adjusting the rate of interest to more nearly meet the existing monetary conditions.

It has taken considerable time and much deliberation for our municipalities to appreciate the necessity of this move, which is borne out to a marked degree by the frequency in which tenders are called for and all bids rejected.

Pruning the Estimates.

They are now fully alive to the situation, indeed, so much so that estimates for future works are being examined closely and we know of many instances where the pruning process has been exercised to no mean degree. This is very satisfactory, and such action will, no doubt, be applauded by those who may in the coming year be called upon in an executive capacity to pass on the security of Western debentures.

The Western mortgage still looms out as a strong competitor for investment funds. Indeed, were it not for the increase in the rate of interest on small Western municipal bonds it would latterly have been next to impossible to interest buyers in such securities even to a more or less limited extent.

The interest obtainable on the rural school district, village and small town debenture is now nearer to the mortgage rate than has been the case for several years. We think that the change which has taken place is a healthy one, and it is to be hoped that this condition will be maintained. Unless it is maintained, Western municipalities must expect to encounter difficulties in marketing their issues. This, of course, does not apply to the issues of the cities or larger municipalities as they look in another direction for their market.

Only Necessary Expenditures.

The cost of living is another factor that must be considered and the growing tendency towards the securities of the better class of industrial enterprises and public service corporation bonds has no doubt had the effect of diverting the attention of private investors from our Western municipals. The individual who buys this grade of security is one who is usually affected by the increase of the cost of all the commodities that enter into the maintenance of our daily existence.

Investors in debentures are demanding a higher return for the reasons above stated, and for many other reasons, but the chief one is because they can obtain the higher return elsewhere and upon securities, which, to them, appeal as being equally as safe. Those who are in the habit of buying second or third grade municipal debentures are quite satisfied when discussing the term "security" to give the benefit of the doubt to the rural school debenture when compared with the average first mortgage, but many contend there is no justification for the spread of from 1½ to 2½ per cent. in the yield in favor of the rural school bond, as was the case not a long time ago.

My advice to the smaller Western municipalities is, expend in improvements only what is necessary and keep a watchful eye on the bonus to industry promoters. Such enterprises frequently end in failure and a further tax imposition on the ratepayers for years to come.

(1) Of an issue of $1,000,000 $450,000 was taken in England and the remainder in Canada. (2) Purchased by an U.S. Bond House. (3) On July 1st the Company had issued to them $500,000 additional bonds which were issued to them in view of capital expenditures made. (4) Gold debentures. (5) Purchased on joint account by a Canadian and U. S. Bond house, and sold in Canada and U. S. half each. (6) The remaining $1,000,000, of this issue was sold in the U.S. (7) This issue was made by the company to redeem $1,850,000 bonds of Canadian Colored Cottons Mills Co., due April 2, 1912. (8) Half million sold in Great Britain. (9) Sold in England $750,000. (10) Sold in England $750,000. (11) Sold in England $250,000. (12) Sold in England $200,000. (13) Three-year 6 per cent. collateral trust gold notes. (14) Sold in Great Britain $1,000,000; the entire issue was sold privately.

BOND ISSUES IN CANADA

Many Were Made Last Year—Small Denominations Popular—Equipment Issues

Bond issues in Canada last year amounted to approximately $49,251,000, the details being shown in the accompanying table. Six of those noted bore a rate of 5 per cent., thirty nine of six per cent., three of 7 per cent, and one of 4 per per cent. Thirty were issued at par, 13 at a discount, and 4 at a premium. With 19 bond issues aggregating $10,090,000, a total common stock bonus of $3,385,000 was given.

Bonds Were Well Absorbed.

As these figures indicate, the past year was one of the most active for bond flotations in Canada. The bonds were particularly well absorbed and the best stocks also received a good reception. The chief features of the bond market were the strength of issues in Canada, the increase of buying by the United States, the necessity of a large amount of temporary municipal financing (discussed elsewhere in this issue), and the growing tendency of municipalities to market their issues overseas, and the greater patronage of the average investor.

In addition to the purchase, by United States houses, of the Montreal Tramway securities and, on joint account, with Canada, of Bell Telephone bonds, $1,000,000 consolidated first mortgage sinking fund 6 per cent. bonds of the Sherwin Williams Company of Canada, were also purchased by a United States firm. In 1910, 1½ per cent. of our total bond issues were sold in the United States in 1911, 6½ per cent.; and last year it will probably be found the sales in the neighboring republic were the largest on record.

Small Denominations.

The comparatively recent innovation of small denominations has become an important factor in the market and has broadened considerably the bond purchasing field. Another impetus to bond buying has been the tendency of the public to forsake the stony path of highly speculative, and in many cases, worthless stocks, such as those of oil and "paper" mining companies.

The opinion is growing among Eastern financial houses that greater attention should be paid by them to the securities purchasing power of the Western provinces and particularly of the Pacific Coast. Several firms have announced their intention of opening offices in Vancouver and of studying the possibilities of Western Canada as a bond buying area.

In addition to the issues noted above, the Canadian Car and Foundry Company sold $500,000 additional 6 per cent. first mortgage bonds to Montreal and Boston financial houses. A Montreal house also purchased $1,100,000 6 per cent. mortgage bonds of the Lake Erie and Northern Railway. The towns through which the road will pass will take $500,000 second mortgage bonds of the company. On July 1st, the Steel Company of Canada had issued to them $500,000 additional bonds which were issued to the company in view of capital expenditures made.

Montreal Tramways Financing.

The Montreal Tramways and Power Company's financing was among the most important consummated during the past year.

A New York firm purchased $5,000,000 three-year 6 per cent. collateral trust gold notes dated April 1, 1912, and maturing April 1, 1915. The issue of the new notes will result in the retirement of all the floating indebtedness of the company, and no further financing is contemplated during the life of the notes. Two offers for these securities were received in London, but the terms of the New York arrangements were more satisfactory and proved more advantageous to the company. The $5,000,000 notes are a direct obligation on the company and are secured by the deposits of $6,000,000 of the 5 per cent. debenture stock of the Montreal Tramways Company, 10,400 shares of the common stock of the Tramways Company, 39,000 shares of the common stock of the Canadian Light and Power Company, and 875 shares of the common stock of the Saraguay Company. The aggregate market value of the collateral is, at present, upwards of 150 per cent. of the amount of the note issue.

The proceeds of the sale of the notes were used to retire the floating indebtedness of the company and to provide funds for working capital.

Another New York house purchased $1,350,000 6 per cent. short term notes (three years) of the company. These were secured by the deposit of $1,600,000 Canadian Light and Power 5 per cent. bonds.

Blocks of $10,445,000 and $890,000 5 per cents. of the Montreal Tramways Company were also sold in the United States.

The following were among the bond and other securities issues sold in the United States, the amounts noted being those placed there, aside from the companies' issues in Canada:—

Canadian Northern Railway (equipment)	$8,000,000
Grand Trunk Railway (equipment)	$5,360,000
Bell Telephone Company	875,000
Montreal Tramways Company	11,335,000
Montreal Tramways and Power Company	6,350,000
Vancouver Lumber Company	1,000,000
Metal Shingle and Siding Company of Canada	500,000

Railroad Equipment Bonds.

To make payment on new rolling stock, the Grand Trunk Railway issued in October, equipment trust notes to the extent of $5,360,000. These bear interest at the rate of 4½ per cent. and are redeemed in ten years by semi-annual payments. The notes are dated November 1, and are known as series B of the Grand Trunk Equipment Trust Notes. The notes were sold in the United States.

Since 1902 the Canadian Northern has issued equipment bonds to a par value of $30,086,458, of which amount $9,458,575 had been retired by April 2nd, 1912. Equipment bonds to a par value of $20,627,882 are at present outstanding and are held as permanent investments by numerous private and institutional investors in Canada, England and the United States.

◆

PROVINCIAL GOVERNMENT LOANS

They Were Not Heavy Last Year—Several Provinces Were Not Borrowers

Provincial government borrowings were not extensive during 1912, the total being $10,522,100, exclusive of short term loans. The following is a summary:—

Ontario (sold in Canada)	$ 1,439,700
Ontario (sold in England)	1,458,000
Manitoba	2,624,400
Alberta	5,000,000
	$10,522,100

The following were among the temporary loans negotiated by the provincial governments in London last year:—

Province.	Amount.	Term.	Rate.
Alberta	£1,500,000	6 months	4½
Nova Scotia	200,000	"	—
Saskatchewan	1,000,000	"	5¼

The Saskatchewan issue was renewed in November for six months. The Alberta loan in December was renewed for six months at a rate of 5¾ per cent.

New Brunswick made no loans except of a temporary nature through their banking offices.

Quebec Repaid Loan.

There has been no necessity for a number of years for the province of Quebec to have course to a permanent loan, or to a loan of any kind. On the other hand, year to year sees a diminishing public debt. For instance, on July 1st, 1912, the province was able to pay off in the London and Canadian market the balance of the loan contracted in 1882, bearing interest at 5%. Of that loan, debentures for £500,000 ($2,433,333) were issued in London, and for $1,066,500 in Quebec, redeemable at one year's notice by the government, at the expiration of thirty years, which notice was given in June, 1911. Part of the debentures were converted into 3 per cent. inscribed stock in 1897 and 1898. The outstanding debentures, amounting to £351,900 ($1,712,580) of the London issue, and $693,000 of the Quebec issue, were paid on July 1st, 1912. The financial position of the Quebec government on June 30th, 1912, was such that it could pay off this loan from the consolidated revenue without issuing any new loans to provide the means for so doing, a fact which is unique in the history of the province. The cash deposits in banks on June 30, 1912, pertaining to the consolidated revenue fund, amounted to $2,609,493.

Ontario's Bonds at Home and Abroad.

In April, 1912, the province of Ontario invited subscriptions from the Canadian public for a loan of $2,000,000 on provincial bonds or Ontario government stock. The bonds were dated May 1, 1912, and payable November 1, 1941, in denominations of $1,000 each. The government also invited subscriptions for the balance of $210,000 of the Algonquin Park loan on the same terms and with the same date. The issue price during May, 1912, was 102 for each $100, and after May 102 and interest accrued from May 1. All bonds and inscribed stock issued under the authority of the said act are free from all Ontario provincial taxes, charges, succession duty and impositions whatsoever. Part of these loans were sold last year.

A sale of $1,458,000 of Ontario provincial government onds was made privately in May, and subsequently at slighty over par. The Bank of Montreal took the entire amount nd disposed of it chiefly in Great Britain. This was part f the $5,000,000 loan authorized for Northern Ontario deelopment.

Making up the $1,439,700 sold in Canada, was $1,000,oo authorized on October 31, 1911, and $439,700, being part f the loans aggregating $2,210,000.

Manitoba, Saskatchewan and Alberta.

Manitoba sold government stock in the London market earing interest at the rate of 4 per cent. to the amount of $540,000.

No loans were made by the province of Saskatchewan uring the past year, but that government will likely be a orrower in the London market during 1913.

No loans were raised by the government of Prince Edward Island last year.

The province of Alberta sold $5,000,000 4 per cent. bonds n London in November at 97. These bonds were to take up n equal amount of treasury bills, which were authorized for he purpose of carrying out improvements and additions to he telephone service and other public utilities.

The only loan of the province of Nova Scotia was one of £200,000 in London for six months, due March 10, 1913.

FLUCTUATIONS IN MUNICIPAL BOND PRICES

Review of the Market for the Past Sixteen Years—Prices Were Low at End of Last Year

BY C. H. BURGESS.

There is still considerable talk in the press and in finncial circles about the increased cost of living and the great emand for money, making it necessary for investors to proure a higher rate of interest on their investments. Whatver has been the cause, in the last 14 or 15 years there has een a great change in the yield rates on the different muniipal bonds sold in this country and notwithstanding the fact hat nearly every municipality is much larger and wealthier han it was 15 years ago, they have to pay more for the noney they borrow than they did when their population and he value of their property was ½ to ⅔ of what it is at preent. A short synopsis of the changes which have taken place at various periods since that time will be of interest. We will not make comparison of Western municipal securities ecause until after 1900 Western municipalities, with the xception of the larger places like Winnipeg, Brandon, Calgary, Vancouver, etc., played little part in the bond market. The basis on which figures are given is the interest return hat the different debentures sold to yield.

1896-1897.

Provincial Governments (Ontario, Quebec and Nova Scotia) 3⅛ per cent. to 3¼ per cent.

Large cities and Ontario Counties (Toronto, Montreal, London, etc.) 3¼ per cent. to 3⅜ per cent.

Large Ontario towns and townships, 3½ per cent. to 3⅝ per cent.

Village bonds, 3¾ per cent. to 4 per cent.

For several years up to 1896 trade conditions in Canada nd the United States were very bad, following a succession of poor crops. The result was vast accumulation of money n banks, etc., and the impossibility of securing satisfactory nvestment for it. Call loan rates on bonds ranged about ½ per cent. and it was difficult to use as much as was offered. These were the years when the Rossland mining boom started, and it was an easy matter to float companies hat promised large returns when there was so much money ying idle and hungry for employment. The end of these years saw a tendency for trade improvement and in 1898 and 1899 it was fairly well under way, as was also the Boer war, o that as far as bond business was concerned it felt an npleasant increase in call loan rates, and consequently it egan to affect the prices at which securities could be sold. So that in 1899-1900 the prices ranged about as follows:—

1899-1900.

Provincial Governments, 3½ per cent. to 3⅝ per cent.

Large cities and counties, 3¾ per cent. to 3⅞ per cen'.

Large towns and townships, 4 per cent. to 4⅛ per cent.

Village Bonds, 4⅛ per cent. to 4¼ per cent.

Prosperous times still continued in 1901-1902 and during the period 1899 to 1901 there were many public flotations of securities of new Canadian industrial concerns put on the market culminating for the time being in 1902 when we had the most exciting year in stock speculation we had had in the period just covered. The slump in stock values in the fall of 1902 and its continuance throughout almost the whole of 1903, affected the value and the demand for municipal and all other bonds, so that 1903 was a poor year with an improvement in 1904. Average prices for these years were as follows:—

1901-1904.

Provincial Governments, about 3¾ per cent.

Large cities and counties, 3⅞ per cent. to 4 per cent.

Large towns and townships, 4⅛ per cent. to 4¼ per cent.

Village bonds, 4⅜ per cent. to 4½ per cent.

The year 1905 was one when money had accumulated we believe principally because of the unsatisfactory experience of investors in the years following the slump and the disinclination to make investments. This year the confidence being restored, money was invested to a very large extent, with the result that it had a tendency to strengthen prices so that for the years 1905 and 1906 the average prices were about as follows:—

1905-1906.

Provincial Governments about 3½ per cent. to 3⅝ per cent.

Large cities and counties, 3⅞ per cent. to 4 per cent.

Large towns and townships, 4 to 4⅛ per cent.

Village bonds, 4¼ per cent. to 4⅜ per cent.

The panic of 1907 and the revival in 1908 are too recent to need any comment, but from the following list it will be seen the effect in the first place of the panic and in 1909 how great the inclination swings to extreme as far as prices are concerned, after a tremendous fall has taken place:—

1907-1908.

Provincial Governments, 4 per cent. to 4¼ per cent.

Large cities and counties, 4½ per cent. to 4¾ per cent.

Large towns and townships, 4¾ per cent. to 5¼ per cent.

Village bonds, 5½ per cent. to 5¼ per cent.

1909.

Provincial Governments about 3⅞ per cent.

Large cities and counties, 4 to 4¼ per cent.

Large towns and townships, 4¼ per cent. to 4⅜ per cent.

Village bonds, 4½ per cent. to 4⅝ per cent.

The year, 1910, saw more of the re-adjustment of prices to reasonable levels, and it will be noticed with the exception of the panic year that prices of bonds were more attractive than they had been at any time during the last 14 or 15 years. The prices ranging during 1910 are approximately as given below:—

1910.

Provincial Governments about 3.90 per cent.

Large cities and counties, 4, 4¼ per cent. to 4⅜ per cent.

Large towns and townships, 4½ per cent. to 4⅝ per cent.

Village Bonds, 4⅞ per cent. to 4¾ per cent.

There have been minor fluctuations during these different years, but the prices given are an attempt to strike an average rather than give the lowest and the highest figures. For instance, in 1908, after the panic in the fall of 1907, good town bonds could be purchased to yield the investor 5½ per cent., while the bonds of the cities of Toronto, London and Hamilton and some of the older counties were offered on the market to yield about 5 per cent. This did not last long, and before the year was out the same bonds were selling to yield from 4 to 4¼ per cent. Since 1900, and especially from 1904 or 1905, Western municipal bonds have figured materially in the general market and have tended to prevent prices of Ontario municipalities from getting too high, because when investors cannot buy an Ontario bond to yield a good rate of interest, there are usually some Western bonds which can be obtained to satisfy the requirements. With regard to Western and Ontario municipal bonds, the former usually command a slightly lower price than those of the latter, all other things being equal. In the list given, only the bonds of the older places have been considered, as it would not be possible in a brief synopsis to consider the municipalities of the newer sections. Again, these did not figure prominently until the last five or six years.

The year 1911 started out with fair prospects and a rather encouraging demand. While prices did not stiffen much there was no tendency to sag. This condition lasted until about June, when as usual the market began to show signs of falling off, with the consequence that July and August were dull months and there were marked changes in the prices that were bid to municipalities. This has continued throughout the balance of the year.

At the beginning of the year prices ranged about as follows:—

1911.

Provincial governments, 4 per cent. to 3.90 per cent.

Large cities and counties, 4⅛ per cent., 4¼ per cent. to 4⅜ per cent.

Large towns and townships, 4½ per cent., 4⅝ per cent. to 4¾ per cent.

Village bonds, 4¾ per cent. to 4⅞ per cent.

At the end of the year prices for Ontario bonds were about as follows:—

Provincial governments, 4 per cent. to 3.90 per cent.

Large cities and counties, 4⅛ per cent., 4⅜ per cent. to 4½ per cent.

Large towns and townships, 4½ per cent., 4¾ per cent. to 4⅞ per cent.

Village bonds, 4⅞ per cent. to 5 per cent.

Bonds in Western Canada also took a decided drop, and it was easy to get school district debentures yielding—for the shorter term—5½ per cent. to 5¾ per cent., and the longer term 5½ per cent. to 5¼ per cent., while for large towns from 5¼ per cent. to 5½ per cent.

The year 1912 started with about the same prices prevailing as at the end of the year 1911. There was a marked demand during the first two or three months of the year. The market was feeling the effect of the continued poor reception which Canadian loans were receiving on the London market and securities began to accumulate in the hands of the municipalities as well as to a certain extent in the hands of dealers. The municipalities followed the precedent of years like 1906 apparently not having profited by their experience of that time, and instead of accepting the highest of legitimate competitive bids they argued that as they did not receive as good an offer as was represented by the price of their last sale, they would hold their debentures until the market got better.

Some municipalities offered their bonds as often as three or four times in about as many months and each time the bids were lower than the previous one. Then June arrived, and although this is usually a fairly good investment month the banks began to draw in their loans and continued to do so until in November, when there was one of the most severe money stringencies that we have had since the panic of 1907. There was no panic, but if a broker was not sure of being able to finance a block of bonds and the municipality was being pressed for payment by the bank at its end, there must necessarily be a drop in price and those municipalities which had refused tenders so often were, in most cases, the ones most pronounced in their desire to sell.

The end of the year showed conditions much the same. As far as prices were concerned, they seemed to have reached the bottom and money was, if anything, a little easier, although it was not very perceptible. Prices for municipal bonds are at present the lowest they have been in 18 or 20 years, with the exception of 1907, and in many cases they are as low as at that time. There was no sharp panicky condition, but simply a gradual and continual drop. At the beginning of the year, prices ranged approximately the same as at the end of 1911. At the end of the year they were about as follows:—

1912.

Provincial Governments, 4¼ per cent. to 4 per cent.

Large cities and counties, 5 per cent. to 4½ per cent. Counties selling at about 5 per cent. City of Toronto 4½ to 4⅜ per cent.

Large towns and townships, 5¼ per cent. to 5 per cent.

Village bonds, 5½ per cent. to 5⅜ per cent.

In Western Canada, where the municipalities are not so long and well established, the drop in prices has necessarily been considerable, and one can secure as high as 7% on village bonds and on good short termed school bonds 6¼% and on long termed school bonds 6 to 5¾%, while town debentures range anywhere from 6½% to 5½%, according to the municipality and method of issue.

MUNICIPAL DEBENTURES AND THE MONEY MARKET

Present Conditions Must be Met to Ensure Successful Issues—Development in the Dominion

BY W. A. NOXON.

A review of the municipal debenture market, especially as applied to the year 1912 is extremely interesting.

From 1895 to 1900 prices were at their zenith and touched the highest point ever attained. The extraordinary combination of conditions subsequent to 1900 gradually brought about the adjustment in values which ended in the rather disastrous panic of 1907. Since then conditions have been such that prices gradually worked up to a rather high level. This was to a large extent due to the confidence and favor extended to municipals by investors in the old country.

To one who has closely followed the market, especially abroad, since 1908, subsequent developments have not been a surprise. The various factors causing adjustment of prices which have become more particularly evident during 1912 might be enumerated, as follows:—

The general increase in the value of money throughout the world, combined with the gradual and steady increase in the cost of living, not only in America but also on the continent of Europe. The exceptional prospects of industrial concerns both at home and abroad, and the consequent extension of public confidence to industrial investments.

Interest and Expenditure.

The continued developments of the Canadian west and the general enhancement in real estate values more particularly in Canada and the United States.

The increasing demand for mortgage loans on terms in keeping with the increased value of money and of land.

The fact that the English demand for Canadian Municipals has been materially reduced as many large buyers now feel that they have as much invested in that class of security as is expedient and conservatively reasonable. This has curtailed the outlet materially as the interest return is not now sufficiently tempting to attract new investors.

The growing impression now becoming general, especially in foreign markets that the rate on our municipal debentures has been altogether too low and entirely out of keeping with the value of other securities in the Dominion of Canada.

A slight apprehension on the part of conservative buyers that municipal expenditures in many cases have been on altogether too elaborate a scale.

Municipalities Must Recognize Prevailing Factors.

In broad outline the above points cover fairly fully the factors entering into the present re-adjustment of values of municipal bonds. In some quarters it is felt that the bottom of the market has not yet been reached but, experience shows that a little rebound is sure to occur after these bottom values have been struck. Present prices will in all probability be close to the average for some considerable time.

Of late many municipalities have found a local market for their bonds on terms considerably better than obtainable in the general market. This applies not only to smaller municipalities but also to some of the larger cities, and is a feature which will probably strengthen the situation very materially as when prices have reached the level attractive to home buyers, a broader market will then be created.

Just as soon as municipalities generally recognize that higher prices must be paid on their borrowings the demand will be stimulated and sooner or later the English market will then absorb Canadian municipals in increasing quantities. It must again be emphasized, however, that municipalities must sooner or later realize that they will have to issue their bonds carrying these higher rates of interest and not expect to dispose of their securities on terms nearly as favorable as have been procurable during the past few years.

BOND SALES ON CANADIAN EXCHANGES

The following is a record of bond sales on the Canadian exchanges last year, with comparisons:—

Toronto.

1912	$1,711,220
1911	1,998,230
1910	2,829,200
1909	3,659,700

Montreal.

1912	$6,295,350
1911	5,707,000
1910	6,115,480
1909	5,791,428

CANADA'S BOND ISSUES FOR SEVEN YEARS

nce Nineteen Hundred and Five, More Than One Billion Dollars of Bonds Have Been Sold. How the Purchases Have Been Divided. Some Interesting Comparisons of Bond Financing.

During the seven years from 1905 to 1911 inclusive, nadian bonds with a par value of $1,230,825,630, were is- ed. The growth of bond financing in Canada in the past v years has been remarkable. It is due largely to developent of corporation finance. Of the total noted above, the eatest proportion was made up of corporation bonds. The llowing figures reveal this fact at a glance:

Bonds.	Total.
Municipal	$ 198,196,235
Government	253,546,811
Corporation	779,082,584
Total	$1,230,825,630

The formation of new companies consequent upon the neral expansion of Canadian industry, the reorganization existing companies, and during the past three years pecially, the tendency towards consolidation, are all facrs contributing to the large aggregate of corporation bond sues. The following table shows the distribution of bond sues in the various years:—

ear.	Government.	Municipal.	Corporation.	Total.
05 ..	$ 346,087	$ 9,031,160	$125,497,284	$ 134,874,531
06 ..	9,206,000	9,087,008	35,694,000	53,987,008
07 ..	9,274,000	14,430,540	58,931,200	82,635,740
08 ..	77,598,500	46,461,021	72,297,000	196,356,521
09 ..	96,447,224	36,278,528	132,432,500	265,158,252
10 ..	55,000,000	35,748,690	140,251,900	231,000,590
11 ..	5,675,000	47,159,288	213,978,700	266,812,988
	$253,546,811	$198,196,235	$779,082,584	$1,230,825,630

The year 1905 accounted for small government bond is- es. Those for 1909 approximated nearly $100,000,000. In 10, they dropped to about half that amount and in 1911 to little more than $5,000,000. The outlook for coming years for heavy government bond issues, as large public works e contemplated.

crease in Municipal Financing.

Municipal financing naturally has increased considerably. he rapid growth of towns and cities causes demand for wa- r, sewer and lighting systems, and all necessary local im- ovements. The financing of municipal street car systems is been carried quite as far as is consistent with safety. ur smaller municipalities should not embark on these enterises without seriously considering the risks involved in ch an undertaking.

More than half the bond issues for the seven years' perd are those of railway, public service and miscellaneous rporations. As Mr. E. R. Wood, of Toronto, has pointed it, in very large degree the development of the industrial e of Canada depends upon the successful marketing of this ass of securities. It is encouraging to note that during 1911 vestors in Canada and Great Britain continued favorable industrial loans. Most Canadian industrial enterprises ive been in a highly prosperous condition and investors olding securities therein have shared in this prosperity. he larger income, too, from this class of security has also en instrumental in facilitating distribution.

The Canadian market continues partial to industrial serities, the various issues offered recently having been well stributed. The high cost of living in Canada gives many vestors little choice as the highest possible income consistit with safety is a real necessity. That this faith in the ture of Canada will be justified, and that investors will enefit by identification with the development of the country's tural resources, is not doubted.

ho Has Bought Our Bonds?

The question as to who has bought our $1,230,000,000 orth of bonds during the past seven years, is answered by e fact that Great Britain purchased $932,000,000 of them, anadian investors absorbed $242,000,000 and buyers in the nited States $56,000,000. Here are the figures of each ountry for each year:—

ear.	U. S.	Canada.	Gt. Britain.	Total.
905 ...	$ 9,256,782	$ 35,149,921	$ 90,467,828	$ 134,874,531
906 ...	4,118,350	23,304,958	26,563,700	53,987,008
907 ...	4,779,000	14,761,683	63,095,057	82,635,740
908 ...	6,316,350	24,585,140	165,455,031	196,356,521
909 ...	10,367,500	60,433,964	194,356,788	265,158,252
910 ...	3,634,000	39,296,462	188,070,128	231,000,590
911 ...	17,553,967	44,989,878	204,269,143	266,812,988
	$56,025,949	$242,522,006	$932,277,675	$1,230,825,630

The United States are taking a greater interest in our securities markets. The past year's purchases, privately and publicly, of Canadian bonds exceeded, so early estimates indicate, the total for 1911, which was the largest amount on record. The same applies to Canada, which is yearly making a better market for its own bonds. Great Britain is, as is well known, our best lender. That country has taken an average of $100,000,000 worth of bonds every year since 1905. British investors are also heavy purchasers of our stocks and other securities. The buying of Canadian bonds in the period under review is best seen at a glance in the following table compiled by The Monetary Times showing the percentage shares:—

Year.	United States.	Canada.	Gt. Britain.
1905	6.86	26.06	67.07
1906	7.62	43.16	49.20
1907	5.78	17.86	76.35
1908	3.21	12.52	84.26
1909	3.90	22.50	74.00
1910	1.50	17.00	81.50
1911	6.58	16.86	76.56
Total for 7 years	4.55	19.92	75.74

The greatest percentage share taken by the United States was in 1906. In view of the larger volume of bonds issued in 1911, the percentage share of 6.58 for that country was gratifying. Canada's percentage share was far greater when our securities were in smaller volume, besides which the London market in the early years was not cultivated by Canada to the extent it is to-day. With the exception of 1906 Great Britain every year since 1905 bought more than 50 per cent. of our bond issues. In 1906, its purchases were only 0.80 under 50 per cent. The United States will, during the next few years, probably be a better purchaser of our bonds than hitherto. This phase of the matter is dealt with on another page by Mr. Henry Clews, one of the best-known security bankers of the United States and one of the most notable figures for many years past in Wall Street.

Canadian Corporations Abroad.

More than $67,000,000 worth of the bonds of Canadian corporations operating in foreign countries were sold during the past five years. The figures are appended:—

Year.	Amount.
1907	$11,461,200
1908	
1909	23,250,000
1910	5,900,000
1911	26,820,000
	$67,431,200

Practically all these bonds were purchased by Great Britain. These companies were originally formed to carry on works of hydraulic development in Mexico and Brazil. By a system of absorption practically all the public utility services in the various centres served by these companies have come within their control. Stock ownership, which originally was vested in Canada, has largely been transferred to Great Britain and Europe as successful operation has enhanced the value of outstanding securities. For several years, this class of corporation has either financed by the issue of capital stock or found it necessary to issue only a limited amount of bonds.

As to Municipal Financing.

With regard to municipal financing, the question has been raised both in Canada and the United States as to the tendency of towns and cities "to grow into themselves," as it has been termed, rather than to encourage new and taxable private enterprise. As one writer has said, "We are putting more capital into municipal improvements—these being the luxurious equipment of city life—and less into the railroad, industrial and other productive enterprises upon which the dwellers in the cities depend for sustenance." Statistics of bond issues in both countries illustrate that trend. Here is a table showing the issues of municipal bonds in the United States every year since 1905, and the amount of all bonds issued, including municipals:—

Year.	Municipals.	All bonds.	% Mun'pals.
1905	$369,312,017	$1,248,273,000	29.6
1906	431,232,000	1,397,453,805	30.9
1907	473,722,758	1,298,838,030	36.5
1908	534,854,420	1,362,338,400	39.3
1909	503,110,652	1,430,330,052	35.2

Year.	Municipals.	All bonds.	% Mun'pals.
1910	579,142,149	1,417,037,128	40.8
1911	627,498,979	1,620,407,879	38.8
1912	715,223,300*	1,744,531,250*	40.9

*Estimated.

New Capital From Earnings.

New capital is necessarily saved out of earnings, because it can be treated in no other way; and a Wall Street journal thinks that the competition of municipalities with reproductive enterprises for a large share of the yearly output of new capital is a matter for anxiety, since funds devoted to municipal purposes are largely unproductive. So far as can be judged from the last census report on municipal finances, only about 29.2 per cent. of the aggregate city debts of the United States represents capital devoted to productive uses, such as waterworks, lighting and power plants, and public and municipal service corporations—or 70.8% of saved capital taken permanently out of productive use.

The average of municipals to total bond issues for the past three years in the United States is about 40.2 per cent. as compared with a general average of 30.5 per cent. prior to 1907. Assuming that 70.8 per cent. of municipal capital is commercially unproductive, it thus appears that about 29.7 per cent. of the total capital annually raised through bond issues is now devoted to unproductive uses, as compared with but 21.6 per cent. only a few years ago.

Here are the figures for Canada, which show a similar tendency, the percentage of municipals gradually increasing:

Year.	Municipals.	All bonds.	% Mun'pals.
1905	$ 9,031,160	$134,874,531	6.69
1906	9,087,008	53,987,008	16.83
1907	14,430,540	82,035,740	17.40
1908	46,401,021	196,350,521	23.66
1909	30,278,528	205,158,252	13.68
1910	35,748,690	231,000,590	15.47
1911	47,159,288	206,812,988	20.79
Total	$198,196,235	$1,230,825,630	16.10

In 1905, the proportion of municipal bonds to the total bonds issued was 6.69. By 1908, the proportion had risen to 23.66. While it declined in 1909 to 13.68, in 1911 it had risen to 20.79. The aggregate of municipal bonds for the seven years period equalled 16.10 per cent. of the total bonds issued.

In this connection it is interesting to remember that the cost of capital for commercial enterprises is rising and the price of fixed income bonds is falling. Municipalities should see to it that the high cost of living cannot be traced in part to municipal extravagance.

What the Countries Bought.

The appetite of the various countries for our bonds is indicated in the following table, the figures being for 1911:—

Bonds.	Canada.	U. S.	Gt. Britain.
Government	$ 1,300,000	....	$ 4,375,000
Municipal	16,326,378	$ 2,334,467	28,498,443
Railway	549,500	4,249,500	95,673,700
Tramway, Light, Heat and Power	4,725,000	9,195,000	18,185,500
Miscellaneous	21,769,000	1,775,000	31,036,500
Canadian corporations operating in foreign countries	320,000	....	20,500,000
	$44,989,878	$17,553,967	$204,269,143

Canada evidently likes best its municipals and miscellaneous corporations, public service corporation bonds also being acceptable. Nearly all our railroad bonds are sold abroad. The government securities purchased at home have been chiefly those of the province of Ontario. United States investors have patronized mostly the securities of our railway and public service corporations. After railroad bonds, the British investor patronized mostly those of public service and miscellaneous corporations. A large number of municipals were also purchased. Details of bond sales during the past year will be found on several other pages of this issue.

HOW TO APPEAL SUCCESSFULLY TO THE FRENCH INVESTOR

Some Hints for Canadian Promoters and Financiers—Must Comply With French Law, Otherwise Flotations Will Fail

BY MARC DE VALETTE.

It was said recently by Monsieur Geo. Gerald, a member of the French Parliament, that Paris was a "port d'exportation" of the French savings and capital. In fact, within less than six years, i.e., from the beginning of 1906, 15,000,000,000 francs worth of foreign securities have been emitted on the Paris financial market, whilst during the same period 5,000,000,000 francs of French securities were emitted on the same market. The emissions and introductions of the first half-year, for Paris only, are as follows:—

Emissions and Introductions during the first half-year of 1912 (in francs).

First half-year, 1912.	French.	Foreign.	Total.
Government, public corporations, city bonds..	311,999,230	430,134,363	742,133,593
Other bonds	417,926,613	309,206,110	727,132,723
Ordinary shares and vendors' shares	662,268,690	1,025,566,133	1,687,834,823
Totals	1,392,194,533	1,764,906,606	3,157,101,139

When they consider the enormous amount of ready money to be invested, (over 3,000,000,000 every year), the eventual borrowers, governments, public corporations, private enterprises, ask themselves this natural question: "Can we have part of that money for which we can safely pay the interest?" I can answer that question only in a general way, but the following considerations will be enough to give the proper hints to Canadian financiers.

Must Have at Least Four Per Cent.

The French capital will not be exported unless the interest offered is at least 4 per cent., free from all taxes and duties. In fact, most of the securities offered bring in an interest of 5 per cent.; some, (although very rarely), 6 per cent. It is needless to say that they are always offered below par. Whilst the lowest rate of interest was offered during 1912 by the Crédit Foncier du Royaume de Hongrie (Hungarian Land Bank Credit), 4 per cent. bonds of 500 francs denomination sold at 487 francs, the Land Bank Credit of Sao Paulo City (Brazil), has emitted 30,000,000 francs 6 per cent. bonds, of 525 francs denomination at 487 francs 50. At about the same time, i.e., the beginning of last year, the Crédit Foncier de France, (French Land Bank Credit), emitted 2,000,000 bonds of 250 francs each at the rate of 3 per cent. only. This emission was oversubscribed 82 times in France. All the emissions of the Crédit Foncier de France have recorded a similar success. This is to show that the French investors may be content with an interest of 3 per cent., but it must be a national investment.

Bonds and Shares in France.

Most of foreign Land Banks Credit find a market in France for their bonds and shares. From January to July of last year the following emissions were made without the least difficulty in Paris:—

	Francs.
Russian Land Bank Credit of farmers, 666,667 bonds of 400 francs at 385 francs	256,666,795
Austrian Land Bank Credit, 30,000 shares of 300 crowns at 1,140 crowns	36,382,500
Sangha-Oubanghi Land Bank Credit, 120,000 shares of 100 francs at 265 francs	31,800,000
Franco Argentine Land Bank Credit, 50,000 new shares at 590 francs	29,500,000
Sao Paulo City Land Bank Credit, 60,000 first mortgage bonds 6 per cent., redeemable at 525 francs sold at 487 francs 50 centimes	29,250,000
Cuban Land Bank Credit, 50,000 bonds 5 per cent. of 500 francs sold at 490 francs	24,500,000
Egyptian Land Bank Credit, 50,000 4 per cent. bonds of 500 francs at 490 francs	24,500,000
Hungarian Land Bank Credit, 50,000 4½ bonds of 500 francs at 475 francs	24,350,000
Brazil and South America Land Bank Credit, 75,000 shares 7,500 francs (half capital called up) at 315 francs	23,625,000

Land Banks Credit appeal to the French public, partly on account of the high reputation of our own Crédit Foncier in France. In a very few words, the fundamental organization of that institution is the following: The Crédit Foncier lends money on real property, first mortgage only, and for 50 per cent. at most of the real value of the lien. The rate of interest cannot exceed 5 per cent. The loans are to be refunded by annuities which include the interest up to date and part of the capital. The duration of the loan may be extended to 75 years, that is to say the full amount of the loan, capital and interests, is to be refunded by 75 annuities or whatever number of annuities agreed between the parties. Against these loans the Crédit Foncier emits whatever number of bonds, (generally of 3 per cent. interest), which may be required and offers them for sale, always with great success, to the French investors. The Crédit Foncier has also a sort of monopoly in lending money to public corporations against similar emissions of bonds, but I leave this aside as it does not concern land credit.

Can Negotiate Bonds Every Day.

The French landowner whose property is not mortgaged can always borrow a certain amount of money, within a short period of time. The lenders, that is to say the buyers of the Crédit Foncier bonds, have no dead title in their hands as they can negotiate their bonds every day on the Bourse, and the borrowers can use a capital towards the improving of their land and properties, just by paying an annual premium for so many years. This, in my opinion, explains the popularity in France of all land banks credit, and a country full of land possibilities like Canada, should make use of such good dispositions of the French public.

MARC DE VALETTE.

Railroad bonds, city or government bonds are also frequently sold in Paris, whilst it is rather difficult to place shares of industrial concerns. In any case a foreign financier coming to Paris in order to sell his securities must not only have a good proposition in hand, he must also be prepared to deposit the full amount of taxes for the first three years upon the whole issue of securities offered on the French market. Such deposit is applicable only to the last three years of the circulation of the securities. In the meantime, the taxes—which are of three sorts,—(an emission tax, a transfer tax and an income tax), are to be paid every three months as they become due.

Must Comply With Law.

The emitting company, however, has the option to deal, as regards this matter, through a "représentant responsable"—that is to say a bank or an individual of French nationality, of strong financial position, who is accepted by the French Government, to act as guarantor. In that case, the banker who represents the foreign company and acts as its "représentant responsable," requires from the said company a deposit which is more or less equal to the amount required by the French Government. I mention this matter of taxes, because till it is arranged, and the deposits actually paid down by the emitting company, no emission can be started. Some foreigners think that the French law is extraordinary and unreasonable in that respect. This may be so, but the first thing to do is to comply with the law and not disregard it, as some Americans have done lately, with the fatal result that their emissions did not go through.

CANADIAN RAILROAD FINANCING AND SECURITIES

Important Transactions Last Year—Tabulation of Securities of Four Principal Roads

The most important railroad financing last year was the issue of $60,000,000 new common stock. Shareholders of record on January 2nd, 1913, were given the right to subscribe at $175 per share, in the ratio of 30 per cent. of holdings or three shares for every ten held. The right to subscribe will expire on February 15th. Payments will be received in five instalments of 20 per cent., or $35 each, on or before each of the following dates, February 13th, April 14th, June 13th, August 18th, October 20th. Interest at 7 per cent. per annum will be paid in October, 1913, from due date of each instalment to September 30th, on instalments up to and including that of August 18th. All the shares of the above issue on which instalments have been paid will rank with existing stock for full dividends accruing for the quarter ending December 31st, 1913.

Stock Taken Abroad.

Accepting the percentage distribution of Canadian Pacific Railway stock in various countries, as given in "Capital Investments in Canada," published by The Monetary Times, the new stock will be taken up approximately as follows:—

	New Stock.	Total Payments.
United Kingdom	$39,000,000	$68,250,000
Continental Europe	9,000,000	15,750,000
United States	6,000,000	10,500,000
Canada	6,000,000	10,500,000
	$60,000,000	$105,000,000

Canadian Pacific Railway.

Grand Trunk and Parliament.

The Grand Trunk Railway introduced a private bill last month, asking permission to issue additional perpetual consolidated debenture stock bearing 4 per cent. interest to an amount not exceeding £200,000 sterling. It is to rank equally and be consolidated with the debenture stock issued the previous acts.

The Grand Trunk Pacific is seeking permission to issue perpetual or terminable debenture stock for a principal amount not exceeding $25,000,000, the proceeds to be applied towards the completion of the railway, the providing of equipment and general purposes.

In December last the Hon. W. T. White, minister of finance, submitted a resolution by which it is proposed to purchase Grand Trunk Pacific bonds. By this method the millions of dollars which go to the Grand Trunk Pacific Company through the "implementing" clause become an interest-bearing investment. This clause provided that the difference between the selling price of the company's bonds and par should be paid by the Dominion Government.

So far bonds have been issued for £7,200,000. They are guaranteed by the Dominion as to principal and interest, and not being a direct liability, have not brought high prices on the money market. At present they stand at 78. So far, as a result of the clause, the government has paid to the Grand Trunk Pacific $4,994,000.

There remains to be issued within the next two or three years £6,800,000. After allowing for sundry commission, etc., these bonds would, on the basis of the present market price, realize about $8,000,000, to be made good. What Mr. White proposes to do is from time to time to buy these bonds, which, as stated above, are guaranteed absolutely as to principal and interest by the Dominion Government.

Plan of the Government.

The saving effected by carrying out the government's proposed plan will be the difference between the price at which a 3 per cent.. bond of the Dominion Government can be placed and that at which a Grand Trunk Pacific 3 per cent. bond with a Government guarantee would sell. At the outside the difference would not probably be more than half a dozen points. It is practically certain that the Government will have to issue its own bonds for this or some other purpose if the ready money at its disposal is devoted to the purchase of Grand Trunk Pacific guaranteed 3 per cent. bonds at par. The rate at which the Dominion Government could place in London its own 3 per cent. bonds would depend on the state of the London money market. At present rates are high, and it is quite possible that the Dominion would have to pay 3¾ per cent. for the funds. That would mean the issue of a 3 per cent. bond at 80. In other words, Canada would be paying the Grand Trunk Pacific $1,000,000 cash for $1,000,000, 3 per cent. guaranteed bonds; then she would proceed to reimburse herself through selling $1,000,000 of her own bonds for $800,000.

WORLD'S TRANSFERABLE SECURITIES

Accumulated Wealth Increased and Developed—Transferable Securities, International Commerce and Railways Exceed All Previous Calculations

At a meeting of the French Statistical Society, M. Alfred Neymarck read a paper on the quantity of transferable securities existing in the world, the amount of the world's commerce, public debts, etc.

At the end of the year 1910 the value of the transferable securities quoted and negotiable on the various stock exchanges of the world represented 163,000 millions of dollars, of which from 114,000 to 120,000 millions of dollars belonged to the subjects of the country in which they were issued.

Securities Owned by Various Nations

He compared the value of securities owned by the various nations themselves in 1908 and 1910 in the following table, the amounts being given in millions of dollars:

	1908.	1910.
Great Britain	27,000	28,400
United States	24,000	26,400
France	21,000	22,000
Germany	17,000	19,000
Russia	5,400	6,200
Austria-Hungary	4,400	4,800
Italy	2,400	2,800
Japan	1,400	2,400
Other countries	7,600	8,000
Total	110,200	120,000

Railroads and International Commerce

M. Neymarck calculated the cost of the world's railroads at 54,000 millions of dollars, for 983,868 kilometres, crediting Europe with 325,193 kilometres, America with 504,236, Asia with 94,631, Africa with 30,911, and Oceania with 28,897.

International commerce he estimated at from 26,000 to 28,000 millions of dollars and European public debts contracted for peace and war at over 30,000 millions of dollars needing an annual payment as interest of 1,200 millions of dollars.

Some Important Conclusions

From these and other statistics M. Neymarck drew the conclusions that in all the countries of the world:

1. Never was the total amount of transferable securities so high.
2. Never has the total amount of international commerce been so great.
3. Never have so many kilometres of railroads been constructed and worked.
4. Never have the commercial, financial and industrial relations of nation with nation, individual with individual, been so great and active.
5. Never have the public debts, the budgets, the charges for or in view of war, the fiscal charges and the taxes been so high.
6. Never has the taxpayer been so heavily affected by the taxes.

M. Neymarck concluded with the opinion that "such large figures show that all this accumulated wealth could only have been increased and developed, thanks to the maintenance of good international relations, which have allowed commercial and financial exchanges to increase."

CANADIAN MORTGAGE BONDS IN HOLLAND

Reasons for Their Introduction on the Amsterdam and Rotterdam Markets—Interesting Views from Without on Our City and Farm Lands

BY W. WESTERMAN.

As president of the Rotterdamsche Bankvereeniging (Bank of Rotterdam), which has taken an active part in underwriting $2,500,000 of 5 per cent. bonds of the Netherlands trans-atlantic Mortgage Bank, of Amsterdam, I felt I ought to visit Canada to obtain an impression of the business being done in this channel. The money obtained from the sale of the bonds was loaned on mortgages on city property and farm lands in Canada. As a rule loans were only taken into consideration when the security consisted of city property in the residential parts of the large cities such as Winnipeg, Saskatoon, Regina and Calgary and due care was given both by the manager and the advisory board that such city property was substantially built and owned by responsible people.

As to farm land, only broken land of good quality and worked by people who offered besides the land some other guarantees, was loaned upon. Generally, no more than 40 per cent. of the value of the property was given and the valuation first formed by the local agent was revised both by the bank inspectors and by the advisory board.

This was what I knew when I arrived in Canada and personal investigation showed me that everything was in the most perfect order. But this was only what I had expected and what had moved my bank to take such an active part in the introduction of the bonds on the Amsterdam and Rotterdam markets.

Value of Security.

In the end, the success of a business of this kind does not only depend upon the administration but on the value of the security lent upon and pessimistic as we bankers always are to a certain extent, I had asked myself if these valuations would hold good for any time and if it were probable that such a relatively high rate of interest could be obtained for absolutely secure loans.

This would depend upon the nature of Canada's development. Some ciphers given by magazines had made me think that this development was in an inflated period and that for this reason the possibility existed that the prices of land in the cities as well as in the country would go down after a while, as economics teaches us that every boom is followed by a slump.

Before leaving New York for Montreal I met prominent United States bankers with whom I talked about Canada. I told them that my experience had taught me that in matters of mortgage, the sale of the mortgaged property, when it came to execution was nearly always impossible or the price bid was so low that the loaner had to keep the property. I asked them what they thought of Canada and whether it was safe to continue the business of loaning money against mortgages under the present circumstances.

Prices of Property.

One of them replied frankly that although he did not see the possibility of depression in the near future, even if it did occur, it could be only temporary and the mortgager who was forced to hold the property would be better off and would make a large profit in the end. All of them thought that I was not sufficiently enthusiastic as to the nature of the development in Canada. This development, they said, was healthy. That opinion was confirmed in Montreal by most conservative people.

From Montreal I went to Winnipeg and from there to Saskatoon, Regina, Calgary and Vancouver with the intention of forming an opinion of my own by seeing the securities, city properties and farm land myself, and to gather some local information. Although in the beginning, the value of the houses as given to me not only by the Transatlantic Bank's own people but also by outsiders seemed rather high when compared with prices in Holland, I soon found that I was making the same mistake as people coming to the United

PINNERS' HALL, AUSTIN FRIARS, LONDON, E.C.

Our Monthly Bond Review is a summary of conditions in the Canadian and English Bond Markets.

Our list of Bonds for Investment, issued monthly, gives the yield of leading Government, Municipal and Corporation Bonds.

These will be sent free on request.

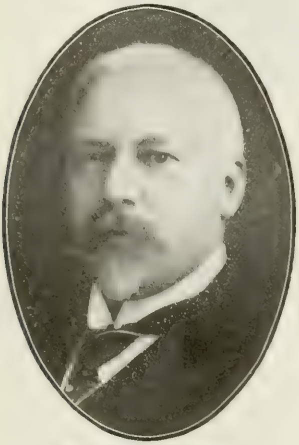
Information regarding any security will be furnished by our Statistical Department, without placing the inquirer under any obligation.

States or Canada for the first time generally make, i.e., looking on the dollar as two guilders and a half or five francs or whatever foreign exchange they are accustomed to. In this way I considered a five thousand dollar house on which two thousand dollars was lent rather highly valued compared with the kind of house one can get for f12,500 in Holland. This is erroneous, the dollar in Canada being the unit and not another form for two guilders and a half. The same mistake is made, the other way round, by Americans and Canadians who, coming to Holland, expect to get for one guilder what they may have on their side for one dollar.

The mortgaged securities I saw, well built and well kept houses in the residential part of the cities generally in new streets which made a good impression upon me and the cities themselves were growing so fast that evidently the value of the property must rise by itself with the cities' growth. Of farm land I am no judge, but what I saw of it gave me the impression that our bank had been careful only to loan upon good land and to reliable people.

Sees Healthy Development.

As regards Canada in general, it impressed me enormously and I believe that the country is standing on the threshold of a healthy natural development. The more land brought into cultivation the faster the cities will grow. Some controversies between the East and the West straightened, this growth will cause the development of industry in the West for which there is certainly scope enough without doing harm to the latter. It would be a good thing for Canada if people took more to mixed farming, but this will come as soon as the new farmers have made some money.



W WESTERMANN.

There is in Canada, as in every new country, a lot of speculation going on in real estate and some people are making money to the detriment of others. The so-called subdivision business when in the hands of unscrupulous men will cause losses to less intelligent people and this may even cause a small setback when people see that it is not all gold that glitters. Every country has to go through this experience and this has little to do with the healthy development.

Careful people advised by honest men can, according to my opinion, continue to lend money against mortgage in Canada without fearing for their money.

◆

The international situation is such that the London papers show an extreme hesitancy in predicting the financial outlook for the coming year. Nearly all confine themselves to reviewing the last year and emphasizing the present situation in the Near East, leaving the conclusion to be drawn that great caution is necessary in financial affairs.

MUNICIPAL SHORT-TERM LOANS

Last Year Was Notable for This Method of Financing —Big Cities Obliged to Hold Bonds in Their Treasury

Almost an innovation in municipal financing in Canada last year, was the negotiation of a large number of short term loans. These have been very infrequent in previous years and little was heard of them. During 1912, many towns and cities, both in the east and the west were compelled, largely on account of market conditions in London, to adopt that method of finance. A complete list is not available, as several banks negotiated some of the short term loans and consider the business of their clients as a private matter. Of the numerous temporary loans made during the past year, The Monetary Times has obtained some details of the following:—

City.	Amount.	Loan.
Burnaby	£ 66,872	One year, 5 per cent.
Montreal	750,000	Six months, 4½%.
Moose Jaw	266,748	Six months, 6%.
Point Grey	240,000	One year, 5%.
Port Arthur	154,321 150,000	Six months, 6%. Six months, 6%.
Prince Rupert	200,000	Three years, 5%.
Quebec	160,000	Six months, 3⅞%.
South Vancouver	170,000	Six months, 4%.
Toronto	1,200,000	One year, 4½%.
Victoria	320,000 170,000 65,000	Six months, 3 15/16 to 4¼%. Six months, 5⅛%. Six months, 5⅜%.
Westmount	50,000	Six months, 5 %.
Vancouver	514,403	Six months, 5½%.
	£4,477,344	

The amount of treasury bills issued in London by Canadian municipalities to October, 1912, was estimated by Mr. F. W. Taylor, Bank of Montreal manager in London, at £4,770,000.

Pathway of Municipal Financing.

The $1,200,000 or about £240,000 one-year notes of the municipality of Point Grey, a suburb of Vancouver, were offered to the public in Canada at 99½ and accrued interest, yielding 5½ per cent. Included in this municipality's general debenture debt of $3,399,000 are $1,350,000 long-term bonds which the municipality is holding in its treasury. Its issue of short-term notes was made to avoid disposing of those bonds in the unfavorable market for long-term securities, which existed at the time of issue in September.

The pathway of municipal financing last year was far from smooth. The congestion of the London market last fall gradually became more acute until it was impossible to float overseas a Canadian municipal, or for that matter, any low rate bond, at any price. That fact undoubtedly led many cities, which refused early in the year to take expert advice and accept what were then good offers, to regret their shortsighted action.

Market Was Surfeited.

Soon after the summer, the London market became surfeited with these treasury bills or short-term notes. The city of Montreal renewed treasury bills at 4⅝ per cent. in September. Moose Jaw, Sask., about the same time placed a large line at 6 per cents., while the municipalities of Burnaby, Point Grey, and others were also in the market.

The comment of a leading Canadian banker in London at that time was as follows:—"Large Canadian cities can secure money as heretofore if the issues are made more attractive to British investors. Third rank cities will probably find it difficult to raise money here on any terms in reason."

The issue of short-term municipal notes is an interesting experiment, but it is to be hoped that it will not become a Canadian habit.

◆

Cartierville is situated on the island of Montreal at the Back River, next to the town called Model City, being built by the Canadian Northern Railway Company. This company owns large tracts of land in Cartierville where it intends to build its shops and have its yards. The Montreal Tramways Company has a half hourly service between Montreal and Cartierville, and it is understood that the municipality, which has at the present session a bill before the Quebec Legislature for incorporation as a town, may be annexed to the metropolis shortly. The population of the town is 1,200 and its rate of taxation 7 mills. Messrs. St. Cyr, Gonthier and Frigon, of Montreal, are issuing $76,000 of its 5 per cent. debentures.

CANADIAN MUNICIPALITIES AND THEIR BONDS

Review of Conditions of Past Year—Increased Interest Rates—Bonds That Meet Requirements of London Stock Exchange Are the Most Popular in English Market

BY W. CAVENDISH MACNEILL.

As anticipated, the year 1912 opened with a reasonably better demand for municipal debentures than existed during the latter months of 1911. This feeling was particularly shown towards the larger issues, that is to say, the debentures of those cities throughout Canada which were of sufficient size and importance to interest the English investor. It was during this period that several issues of Canadian municipal debentures were purchased on behalf of English clients, which were publicly issued later in London with success. One bond issue, amounting to nearly $1,000,000, that of the city of North Vancouver, was negotiated at a higher price than had been before received by that city, and there were several similar instances.

This improvement in the market which was almost entirely exhibited in the larger issues, soon began to diminish and some time before the end of the first half-year the demand had almost entirely dwindled away. Throughout the summer and autumn this condition of affairs not only prevailed but, owing to unusual and adverse circumstances, became greatly accentuated.

Money Stringency Was Felt.

At no time during the past year was money in any sense cheap, but during the last months it became practically unobtainable for call loan purposes, and the rates which were being charged by the banks and other financial institutions were practically prohibitive. On this account, as can readily be seen, bond dealers were unwilling to make purchases of debentures to any extent, unless they had a prospective purchaser whom they could depend upon to take over the securities at once.

This resulted in many municipalities, who offered their bonds for sale by tender, being disappointed in the bids they received and in many cases not actually receiving a bid at all. Some of the municipalities accepted the inevitable and decided to sell at the prevailing price, notwithstanding that this appeared to be very low. Other municipalities declined all tenders in the hope that better prices would prevail a little later on. Unfortunately, the period of tight money and adverse financial conditions was of such duration that those municipalities who put off the evil day, so to speak, have found themselves confronted with a very serious task of municipal financing.

Adopted Short Term Treasury Certificates.

The manner in which municipalities endeavored to obtain relief was through the flotation of short-term treasury certificates, ranging from three months to a year.

A considerably higher rate of interest had to be paid on these by the municipality than the rate which the debentures themselves bore. The municipalities, as a rule, were satisfied to pay this temporarily, hoping conditions would right themselves before the expiration of their temporary loan, and that they would then be able to sell their definitive bonds to sufficiently better advantage to more than offset the high rate of interest which they were compelled to pay for a short time. The situation now, as far as these municipalities are concerned, is that in a number of cases these short term bills are soon maturing and, as the money market, far from improving, has gone from bad to worse, they are confronted with a very difficult problem. Possibly many of them, unless they can arrange otherwise, will have to sell their bonds at the market price, that is to say, whatever they will bring.

As is generally the case when securities drop to the low levels such as are now existing, a few buyers come to light who are not in the market at all except when bargains are being offered. As a consequence, within the last little while a certain amount of business has been done, although prices have been very low. As far as the English market is concerned, this will show improvement early this year. A large number of bonds have been placed at what in other times would be considered very low figures, but it is indicative of the fact that English money in large sums is forthcoming for legitimate purposes, provided the rate of interest is sufficiently attractive.

Probably the undoubted change of sentiment with regard to Canadian municipal debentures bearing 4 per cent. interest was one of the most important facts of the year as far as its bearing on the general bond situation was concerned. Many of the very best authorities believe that the day of the 4 per cent. debenture is over, and that municipalities throughout the country must become reconciled to paying a higher rate of interest for their money than they hitherto have done. Whether the future will prove that such is the case or not, the evidence of the past year and the preceding year has gone to show that the 4 per cent. bond is certainly not as popular as it used to be. These bonds were almost entirely issued by the leading cities, as Toronto and Montreal, or by the different governments. While there will always be a demand for this high grade class of security from certain institutions and for certain specific purposes, at the same time there is no doubt but that the combination of conditions, chief among which is the greatly increased cost of living, have made it imperative for the ordinary rank and file of investors to seek and obtain a higher return for their money than is represented by the 4 per cent. municipal bond. Of course in the case of smaller towns, villages and townships throughout Ontario and other places, the rate of interest which the debentures are usually issued at is 4½ to 5 per cent. It is likely that even these will have to be disposed of at a very considerable discount in order to find a ready market.

Municipalities show greater disposition to meet the requirements of the English investor. By this is meant Canadian municipalities are now realizing the importance of issuing their debentures in such a way as will meet with the approval of the London Stock Exchange.

What of Future Prospects.

As for the future, it is harder to predict regarding prospects now than at any time for many years. Municipal debentures are selling relatively at very low figures, at the same time much improvement in the price is not greatly anticipated. But money will become easier and for a period loans will be obtainable on more advantageous terms. This will result in the dealers being encouraged to compete again, and municipal offerings will probably be in somewhat better demand.

With the probable early settlement of the Balkan War and with this ease of money the foreign situation will be improved, and larger issues will be somewhat better received in foreign money markets. While there appears to be nothing to induce any great optimism, at the same time there is no reason to anticipate anything more unfavorable than has prevailed for the past year or two.

DOMINION GOVERNMENT LOANS

Only One Issue Made Last Year—Loan Transactions of the Latest Fiscal Year

The only loan effected by the Dominion Government during 1912 was one for £5,000,000 3½% stock redeemable at par in London on July 1st, 1950, with option to the government to redeem at par on or after July 1st, 1930, on giving six months' notice. The price of issue was £98. This loan was issued in London in February, 1912.

Redeemed in Cash.

The loan transactions of the Dominion Government for the fiscal year ended March 31st, 1912, were as follow:—

On May 1st, 1911, the 4 per cent. loan of 1874, extended to that date, for £1,635,858, or $7,961,178, was redeemed in cash.

The above loan was issued in London for £4,000,000 in 1874 to run for thirty years. On May 1st, 1904, £1,500,000 of this loan was redeemed and £2,500,000 was extended to May 1st, 1907, with the option of converting into 3 per cent. stock at £105 for each £100, 1874 loan. £573,345 was so converted. On May 1st, 1907, the balance of the loan then outstanding, £1,831,398, was further extended till May 1st, 1911, with a similar option of converting into 3 per cent. stock up to the 30th April, 1910. £96,532 was so converted.

On May 1st, 1912, the 3¾ per cent. loan of 1908-12 for £4,681,870, or $22,785,103, was redeemed and dealt with as follows:—

Redeemed in cash	$17,344,113
Converted into 3½ per cent. loan, 1930-50 (February, 1912, issue)	5,440,990
	$22,785,103

The above loan was issued in London for £5,000,000, June 24th, 1908, redeemable May 1st, 1912, with the option up to 30th September, 1910, of converting into 3 per cent. inscribed stock 1938 on the basis of £106 for each £100 3¾ per cent. loan. On the maturity of the Canada Reduced Loan of 1885, due 1st January, 1910, and of the 1875 portion of the 1875-8 guaranteed loan due 1st October, 1910, stocks of the above loan, to the extent of £130,435 and £66,844, respectively, which were held as a portion of the sinking funds of such loans, were cancelled, and the amount of the 3¾ per cent. loan then outstanding was reduced by such amounts. Stocks and bonds to the amount of £120,850 were converted into 1938 stock under the terms of the prospectus.

APPRAISAL

As an evidence of the diversity as well as the superiority of work which the **NATIONAL APPRAISAL CO., of Boston, Mass.,** is doing in Canada, we append the following partial list of its Canadian clients obtained during the past fifteen months. It will be observed that the list is highly representative of the best in the Dominion.

CANADIAN FLOTATIONS IN LONDON

Total Last Year Was Smallest in Five Years—Market Conditions Were Responsible

Canada's public borrowings in London last year totalled £32,856,603, the smallest annual sum on record since 1908. That amount, according to The Monetary Times' records, compares with those of previous years as follows:—

1905	£13,530,287
1906	6,427,500
1907	11,203,711
1908	29,354,721
1909	37,411,723
1910	38,453,008
1911	39,855,517
1912	32,856,603
Total, 8 years	£209,093,070

Last year's figures were approximately £7,000,000 smaller than those of the previous year, £6,000,000 less than those of 1910 and £5,000,000 less than those of 1909. On the other hand the total for 1912 exceeds the aggregate for 1905, 1906, and 1907 combined. The primary cause of the decline last year was undoubtedly the acute congestion of securities of all kinds in the London market, which became apparent in early summer. Indeed, the overcrowded condition of the market during the winter months had scarcely been relieved before there came an inrush of new applications for capital. These included a large number of Canadian issues.

Left With the Underwriters.

Many of those which entered the market met with a cool reception from the public. The following table shows the results of nine Canadian offerings in London at various times last year:—

Company.	Amount of offering.	Per cent. left with under-writers.	Amount left with under-writers.
Robert Simpson, Limited	£ 920,000	90	£ 828,000
Algoma Steel Corporation	1,130,000	93	1,050,900
Canadian Northern Railway	1,438,356	04	820,547
Edmonton City	595,000	82	487,900
North Vancouver City	126,000	25	31,525
Calgary City	500,000	84	420,000
Winnipeg City	960,000	73	700,000
Trust and Loan Company of Canada	600,000	45	270,000
St. John and Quebec Railway	873,285	95	829,620
	£7,142,741		£5,439,292

Of the £7,142,000 involved in those nine offerings, £5,439,000 was left with the underwriters. Many other issues had just as poor a reception.

The British investor has by no means lost faith in the strength of Canada's legitimate securities. Market conditions were chiefly to blame. Two of the immediate effects were to check further flotations from Canada and to compel Canadian municipalities, and in some cases provincial authorities, to make short term loans, a matter dealt with elsewhere in this issue. At present, conditions have apparently improved but little. Immediately they do so, a large number of municipalities and corporations will seek favor in the overseas market, while many municipalities will have to sell their bonds upon the credit of which temporary loans have been raised.

The following is a summary of the Canadian flotations in London during 1912:—

Government:

Dominion of Canada	£5,000,000
Alberta	1,000,000
	£6,000,000

Industrial:

Vancouver Power Company	£ 800,000
Anglo-Canadian Hotels	30,000
Western Canada Power Company	205,400
Dominion Steel Corporation	1,000,000
British Columbia Telephone Company, Limited	400,000
British Columbia Telephone Company, Limited	102,872
Robert Simpson Company, Limited	460,000
Robert Simpson Company, Limited	460,000
Algoma Steel Corporation	1,130,000
Calgary Brewing and Malting Company	246,500
Canadian-British Engineering Company, Limited	100,000
Hudson Bay Company	1,000,000
Riordan Pulp and Paper Company	158,436
Riordan Pulp and Paper Company	158,436
British Columbia Breweries, Limited	582,816
British-Canadian Marble Company	20,534
Algoma Central Terminals, Limited	500,000
	£7,354,904

Financial and Insurance:

Scottish Canadian Mortgage Company	£ 250,000
Anglo-Canadian Finance Company, Limited	47,000
Trust and Loan Company of Canada	600,000
Scottish and Dominions Trust, Limited	250,000
British Maritime Trust	175,000
British Maritime Trust	500,000
British and General Debenture Trust, Limited	200,000
Investment Corporation of Canada, Limited	250,000
Canadian Middlewest Trust, Limited	200,000
Manchester Canadian Investments, Limited	50,000
British Empire Trust Company	250,000
	£2,772,000

Municipal:

Victoria	£ 308,623
Calgary	400,000
Regina	117,400
Vancouver	991,900
Saskatoon	229,726
Winnipeg	960,000
New Westminster	101,300
Edmonton	595,000
North Vancouver	126,100
Calgary	500,000
New Westminster	256,300
Saskatoon	400,000
Lethbridge	128,100
Moose Jaw	257,600
	£5,372,049

Railways:

Sherbrooke Railway and Power Company	£ 61,728
Grand Trunk Railway	1,500,000
Wisconsin Central Railway	720,164
St. John and Quebec Railway	873,285
Canadian Northern Railway	1,438,356
British Columbia Electric Railway	600,000
Dorchester Electric Company	51,440
Canadian Northern Railway	2,057,612
Edmonton, Dunvegan and British Columbia Railway	700,000
Grand Trunk Railway	1,000,000
	£9,002,585

Mining:

Cape Breton Coal and Iron Company	£ 300,000
Cape Breton Coal and Iron Company	300,000
Mitford Calgary Colliery Company	50,000
	£650,000

Land and Lumber:

Canadian Finance and Land Company	£ 100,000
Upper Fraser River, (B.C.), Lumber Company	90,535
City Estates of Canada	51,440
South Winnipeg, Limited	300,000
British Columbia Fruitlands, Limited	150,000
Canada Agricultural Land and General Investment Company	30,000
Bowness Estates, Limited	150,000
Services Canadian Lands, Limited	100,000
Southern British Columbia Land Company	30,000
Kindersley Farm Lands, Limited	118,000
Western Canadian City and Town Lands, Limited	80,000
Amalgamated Land and Mortgage Company of Winnipeg	100,000
Columbia Valley Orchards, Limited	160,000
Anglo Canadian Lands, Limited	80,000
Southern Ontario Land Company	150,000
Nicola Valley Land and Trust Company, Limited	15,000
	£1,704,975

The individual loans of over £1,000,000 last year were those of the Dominion of Canada £5,000,000; Algoma Steel Corporation, £1,130,000; Grand Trunk Railway, £1,500,000; Canadian Northern Railway, £1,438,356 and Canadian Northern Railway, £2,057,612. The heaviest borrower was the Canadian Northern Railway with its two loans aggregating £3,495,968. That company also had £7,000,000 in December, 1911.

The following table gives details of the purposes of our loans in London last year compared with the previous two years:—

Purpose.	1910.	1911.	1912.
Government	£11,000,000	£ 1,900,000	£6,000,000
Municipal	3,070,400	5,323,749	5,372,049
Railroads	8,218,000	17,122,253	9,002,585
Mining	4,156,084	600,000	650,000
Financial	1,155,761	2,508,250	2,772,000
Land and lumber	5,339,600	4,122,500	1,704,975
Industrial	2,597,847	7,868,765	7,354,904
Total	£35,546,692	£39,855,517	£32,856,603

APPRAISALS

Plans and specifications of buildings and contents, with present values, providing a scientific and economical basis of insurance before a fire and a practically incontestable proof of loss after a fire occurs.

PLANS

Plot plans conforming to the usual insurance surveys. Cross section plans showing mode of construction of buildings. Floor plans indicating location of all power-driven machinery, shafting, etc.

The
Canadian
Appraisal Company
Limited

Head Office, 4 Hospital Street, Montreal
Western Office, McKinnon Building, Toronto

During the eight years of its existence the Company has appraised over 1,000 plants. Our work is confined to the Dominion of Canada, and we are therefore peculiarly qualified for Canadian business, and have become the **Standard Authority** on physical values within the Dominion amongst financial, insurance and accounting circles. Our work is independent and is not influenced by cost or book values, which we do not consult.

All reports strictly confidential.

CERTIFICATES FOR PUBLIC PROSPECTUSES

Authoritative and reliable certificates of physical assets of industrial going concerns as required by the financial markets to insure successful flotation of Canadian securities.

REPORTS

Financial reports for bankers and financial houses upon the general efficiency of industrial concerns, from a point of view of lay-out of plant, buildings, quality of equipment, location, management, etc.

Railroad borrowing was the heaviest last year, although greatly less than in 1911. Industrial corporations raised in London almost as much in 1912 as in the previous year. Governments borrowed more than in 1911. Municipal loans exclusive of temporary borrowing, were slightly larger than last year's. Funds raised for mining were a little larger, too.

Privaie Sales of Securities.

In February the Nova Scotia Steel and Coal Company made a private sale of £1,40[illegible] 5 per cent. bonds, receiving a good price therefore. Many private sales of Canadian municipals were also negotiated. Of this issue in London of £205,761 bonds of the Upper Fraser River, B.C., Lumber Company, £115,226 were sold in Canada. With the issue of £300,000 Cape Breton Coal and Iron Companies 6 per cent. preferred stock, a bonus of 20 per cent. common stock was given. The province of Ontario disposed of an issue of £300,000 of its bonds through the Bank of Montreal. These were sold chiefly in Great Britain.

The following were among the bond issues sold privately in London, the amounts noted, being those placed there, aside from the companys' issues in Canada:—

Ontario Pulp and Paper Company	$ 500,000
St. Lawrence Sugar Refining Company	1,750,000
Ritz Carlton Hotel	750,000
Gordon, Ironsides and Fares	750,000
Price Brothers	250,000
Canadian Car and Foundry	1,100,000
St. Maurice Valley Cotton Company	1,000,000
Eastern Car Company	200,000
City Realty Investing Company	250,000
Southampton Railway Company	50,000
Nova Scotia Steel and Coal Company	1,040,500
Ontario Province	1,500,000

The statement made by The Monetary Times at the beginning of last year may be repeated here. It would not be an unmixed advantage from all points of view if arrangements could be made, for a time at any rate, to somewhat limit the demands that are being made upon the London market for other than what might be termed the gilt-edged investments of the Dominion.

For the first three-quarters of the year 1912, the total new issues in London reached £164,000,000, in comparison with £134,000,000 in 1911 and £185,000,000 in 1910.

◆

ONE HUNDRED DOLLAR BONDS.

A fairly large business was done in Canada last year, by the financial houses, in bonds of small denominations, particularly of $100. The possibility of attracting a larger class of investors in this way has been recognized in Canada only during recent years, and the success of the experiment to date has justified its trial.

Mr. Gardner S. Dresser, in an address before the New York Finance Forum on the subject of One Hundred Dollar Bonds after pointing out the broader opportunities for the small investor that would result from the general adoption by the railroads and industrial corporations of that denomination of bond as the unit of issue, dwelt at length upon the advantages, financial and otherwise, that would accrue to the corporations themselves.

By the more general issue of $100 bonds, Mr. Dresser said holders of corporation securities would be increased from one hundred to a thousand fold and would create a proportionately wider community of interest.

"It goes without saying," said Mr. Dresser, "that an employee, a passenger, a shipper, or a voter who buys securities will not indulge in corporation-baiting. An employee who kicks will become an employee who sticks. A passenger who is inclined to deride will subside. A shipper once carelessly impeding traffic will take thought about speeding traffic. And voters who seek to bust the trust will be just to the trust. Aside from odd lots of stocks, $100 bonds are best means of widening personal interest in a corporation's welfare."

From a financial standpoint, the benefit would come through the greatly increased demand for corporation securities and the consequent higher price they would command. The $100 bond would dissipate prejudice against and strengthen the credit of corporations.

◆

The Canadian Northern Railway have just signed contracts with builders of rolling stock all over Canada for seven million dollars worth of railway equipment to be delivered during 1913. This will include 130 locomotives, 76 passenger coaches, 300 box cars and variety of other cars. Equipment bonds will be issued for the purpose.

CANADIAN MUNICIPALS IN LONDON

Many Flotations in Recent Years—Rate of Interest and Issue Price

The following table shows the municipal bonds of Canada issued in Great Britain since 1907 to date. The issue price is a particularly interesting matter in these days when Canadian municipalities have to face a higher price for money.

Date of Issue.	City.	Amount Issued.	Rate of Interest.	Issue Price.
1907.		£	p.c.	
October 1	Edmonton	139,400	5	100
November [illegible]	Vancouver	[illegible]44,900	4	91

December 10	Lethbridge	128,100	4½	[illegible]2
December 1[illegible]	Moose Jaw	257,[illegible]	5	98

As an inducement to a lagging market, the city of Saskatoon, which issued £400,000 of its debentures last month at 99½ made the rate of interest 5 per cent. It will be noticed that no other city has paid that rate since April, 1908, when Edmonton marketed £187,400 of 5 per cent. at 101. In March of the same years Regina issued £113,700 5 per cents. at the same price, and in October, 1907, Edmonton floated 5 per cents. to the extent of £139,400 at 100. Saskatoon in June 1908, sold £100,000, the rate of interest being 5 per cent. at 101. Its latest issue was made at half a point under par.

Following the example of Saskatoon, Lethbridge a few weeks later placed an issue of £140,000 in 4½ per cent. stock at a price to yield over 5 per cent. Moose Jaw also paid 5 per cent. about the same time on a loan of £300,000.

SHORT-TERM LOANS EXPLAINED

How the London Market Views Them To-day—Present Rates are Onerous

BY H. V. F. JONES.

The enquiry as to how the London market regards the increasing tendency on the part of large borrowers to finance by means of raising temporary loans, in other words, borrowing by means of six months or yearling bills, or short dated bonds having a currency of from three to five years, is difficult to answer, except at some length. Needless to say, the subject is one of very great interest to the market at the present time, and the answer to the enquiry is frequently a matter of grave consideration on the part of many financial houses to whom has been entrusted the responsibility of securing sums with which to repay maturing loans or of obtaining fresh capital for new developments of a pressing and important character.

In any endeavor to ascertain how the market regards such operations it is necessary to remember that there are many points from which the question is viewed; as, for instance, the term "market" is applicable either to the money market or the stock market, and, although both markets are closely knit together and dependent on each other, yet frequently a plan which is welcome or the reverse, to one, may altogether suit the other. Again, the money market is composed of many divisions, as, for instance, banks, bankers, discount houses, government offices, trustees of large estates, municipal and other large corporations, all of which may possess large blocks of money which they may desire to invest in short dated securities. On the other hand, the stock market is linked up with such interests as banks, money brokers and investors large and small, and naturally will, of necessity, view the subject from a different angle.

H. V. F. JONES.

London Market Familiar With Short Term Loans.

In the first place in order to explain the feeling here regarding short dated loans, this form of borrowing is one which the market has been familiar for many years past. Among the first loans raised by the Treasury after the Revolution of 1688, was one by means of Exchequer Bills, and it was not a success; in subsequent years it became the constant practice of the British Government to anticipate revenue by means of the issue of such securities, and Exchequer Bonds were first issued in 1853, but after the first issue of Treasury Bills in 1877 the former method fell into disuse, with the exception of the issue in 1889. It was revived again, however, during the South African War and is now the usual form adopted when raising money for particular purposes where the liability should cease in a short term of years. Treasury bills are issued each year and care is taken by the Finance Department to see that their authority to raise money in this manner does not lapse through nonuse.

The advantages to be gained by raising money by means of short dated securities which at or before maturity are to be funded, that is repaid by a loan raised for a longer period, say 30 to 50 years, were soon so apparently evident that during the past decade many adopted this plan and it has become quite usual lately during periods of dear money to witness the issue of large blocks of such securities. These issues are usually made by governments, municipalities, railways and industrial corporations, and occasionally by other enterprises, and the attitude of the market towards them is greatly influenced by the position of money, European politics and the volume of business of this character which is being offered, and last, but not least, by the character and standing of the borrower.

Competition for Short Loans.

Short loans, such as exchequer bonds, treasury bills, &c., issued by the Bank of England on behalf of the Imperial Government or the India Council, are eagerly competed for, chiefly by the money market, as such securities are always in demand, for even in the most stringent times they can usually be resold, or, as a last resort used as security for loans from the Bank of England. They accordingly are a most liquid and thus an extremely valuable security, practically equal to cash, and form a good reserve against days of financial difficulty. The short dated issues of the county councils and municipalities of Great Britain come close to the above category, but after these a wide gulf, as a general rule, intervenes, for the reason that the issues of Colonial and other governments, unless made by the Bank of England, do not command the same privileges and accordingly when tendered as security for loans, or offered for sale, especially in periods of stress, do not secure the same terms and conditions, with the result that the market, especially the discount houses, must of necessity limit their holding of this class of security as it is their contant endeavor to keep their assets in the most liquid condition.

When, during a period of dear money, the volume of such issues both first and second grade becomes excessive, the rate of discount tends to increase until it arrives at a point where the bills or bonds on offer become attractive to the interests allied more particularly with the stock market and to investors generally, and the field thus widens. At this point the two grades separate, for, as is to be expected, there is a limit up to which banks and other lenders will accept securities of the second category as collateral for loans, with the result that the rate must be made even more attractive in order to reach a wider circle of merchants and investors possessing idle funds which they are prepared to invest for a short term.

As stated above, the competition of such borrowing usually occurs during a period when money is in demand, borrowers, for reason of policy, or otherwise, preferring to defer issuing loans of a more permanent character, with the result that the market for short dated securities becomes congested, and it thereupon becomes a most serious problem in financing the various governments, municipalities and corporations to decide whether, rather than pay onerous rates for a short period in the hope of securing better terms for the larger operation, it would not be wiser in the interests of their clients to advise the issue of a long dated loan at the market price. On the one hand, the advantages of borrowing by short dated bonds or bills are evident, provided the period of stringency is one of which it is reasonably possible to estimate its termination, but on the other hand grave dangers beset this class of borrower should it happen that conditions do not improve as anticipated, and if the maturity of their loans coincides with a grave condition of affairs in, for instance, European politics, accompanied by the usual stringent money market.

Present Rates are Onerous.

At present, a condition of affairs somewhat parallel to that stated, exists in this market and the rates now quoted for short dated loans are so onerous that, comparatively, it has been possible to issue long dated loans on more favorable terms, although the price of issue has been much lower than that obtainable six months ago. The outlook for the future, accordingly, is so uncertain that at the moment one is disposed to commend the courage and decision of those who have brought themselves to face the situation fairly and adopt a plan which gives promise, in the long run, of having been the wisest course under all the circumstances.

In the above connection it is not wise to leave out of consideration the following important factor which will govern to a large extent the conditions under which the funding operation of such short loans is carried through. The market generally becomes quickly cognizant of any plethora of securities of this description, and this knowledge tends naturally to react upon the price, not only of the securities of the government or corporation already issued and dealt in on the stock exchange, but on the price at which the new issue is to be made. Prices will tend to fall and in the long run the borrower may have to bear the chagrin of discovering that all his manœuvres to avoid a period of apparent dear money and depreciated prices, has ended in failure and possibly severe loss.

FOR MUNICIPAL BOND INVESTORS

Some Information Regarding Cities, Towns and Their Environs—A Record of Progress

The following is interesting information regarding cities and towns in Canada which has been gathered by The Moneary Times.

St. Boniface. During 1912 the following industries have ocated here:—

The Union Stock Markets Company, administered by a ommission representing the Canadian Pacific Railway, Central Northern Railway, and Grand Trunk Pacific, and the Government.

The work in connection with these yards is progressing avorably and rapidly, and it is estimated that a million of dollars will be expended before the close of the year.

The Stanley Mineral Springs and Brewing Company, Limited, capitalized at one million, is also making good progress with their fireproof reinforced concrete building, and hope to be ready for business this summer.

The Consumers' Artificial Ice Company, Limited, capitalzed at half a million, will probably have their plant ready for operation by March 1st.

The Acme Sash and Door Factory, capitalized at $250,000, have their plant almost ready for operations.

The Galloway Manufacturing Company, of Waterloo, Ontario, have secured a site of 60 acres just east of the stockyards, and will manufacture agricultural implements.

The Norwood and St. Boniface Industrial Association, who own considerable trackage on the Dawson Road, have reached an agreement with the city council, and will estabish this year three industries, to cost $50,000 each.

The Canadian Enamel Concrete Brick and Tile Company have their plant in running order, and their products are in great demand.

The McDiarmid Company have taken out a permit to erect buildings for a sawn marble and glass works.

Quite a number of smaller concerns have been estabished, among which are a sausage and bacon curing factory and a spaghetti factory.

Live-stock and meat-packing men from Chicago and elsewhere have purchased sites around the stockyards. Contracts for extensive additions to the water works system are being carried out. They have also decided to reconstruct the Provencher bridge, at a cost of $600,000. The Marion Street bridge, which leads direct from Winnipeg to the stockyards, is also to be widened

For marked progress the past year has been a record one for the city as a manufacturing centre, but the outlook at present is that this year will even surpass the year 1912. The Street Railway Company, anticipating conditions, have during the year double-tracked the three principal avenues, and are operating cars on two extensions. They have also notified the city of their desire to further extend the system.

Prince Albert.—Oldest of the quartette of Saskatchewan cities, Prince Albert has pursued a steady and sure progress since the advent of the first white settler in 1864. On the completion of the work at La Colle Falls, the municipality will be in the position of retailing to industrial concerns cheap power (1,500-h.p. of hydro-electric energy), at a rate not exceeding $25 per annum per continual h.p., of which 1,000-h.p. will be sufficient to run a street-car system, which will be in operation the day the power is turned on.

To Prince Albert the installation means much, and to the great territory now being populated by enterprising communities, it means more. No longer will the great natural products of the district run partly or entirely to waste, but will be utilized in factories located in Prince Albert. Already the buildings of five large industries are making satisfactory progress, and will be followed by others early this year.

This will be a year of railway extension also. Prince Albert will be in direct communication with Battleford, and the work of the surveyors who are plotting out the Hudson Bay line will be followed by construction. The enlargement of the Canadian Northern Railway accommodation, the entry of the Grand Trunk Pacific, and the approach of the Canadian Pacific Railway to share in the coming wealth, are all factors of importance to the industrial development of the district.

A line direct north, as planned by Sir William Mackenzie, will tap a district rich in mineral wealth, and thus gve further impetus to development.—Secretary, Board of Trade.

Information regarding a large number of other towns and cities appears in the regular issue of The Monetary Times this week.

◆

A Peking cable says that the Chinese National Assembly have sanctioned six-power bankers' offer of $125,000,000 loan, leaving the Minister of Finance discretionary power to sign documents when he has agreed with bankers on the rate of issue. All vital points have been settled except the issue rate. Provision is made for $125,000,000 40-year 5% bonds. Liquidation of bonds begins at the end of seven years. Security is the salt gabelle (tax) which the Chinese have pledged themselves to reorganize with the aid of foreign advisers. Should reorganization fail to take place within three years the salt tax will be placed under foreign management.

BONDS FOR INVESTMENT

We own and offer in lots to suit purchasers, well-secured First Mortgage Bonds of Public Utility and Industrial Corporations of established earning power, at rates to yield from 5% to 6⅛%.

We shall be pleased to forward on request our list of Bond Offerings, which comprises a selected list of Bonds of this character which we have purchased after careful study and investigation, and which we recommend for investment.

Our Statistical Department is at your disposal, and will be pleased to forward on request a complete report regarding the status of any security in which you may be interested.

MUNICIPAL BOND SALES IN CANADA

They Were Lower Than for Many Years—Short-term Loans Affected Total

Municipal bond sales in Canada last year were smaller than for many years past. The total was $19,767,256 compared with $30,295,838 in 1911, and $29,043,325 in 1910. The following table, compiled from the records of The Monetary Times, show the sales in the Dominion during the twelve months of 1912, compared with the three previous years:—

	1909.	1910.	1911.	1912.
January	$2,540,862	$ 881,838	$ 420,337	$2,133,531
February	4,074,125	1,272,977	1,037,287	2,596,378
March	1,615,368	1,169,730	6,271,925	1,926,716
April	4,033,988	6,805,078	3,910,288	927,160
May	5,185,530	5,964,896	3,946,047	1,928,748
June	2,243,569	2,187,588	3,983,670	1,690,344
July	1,989,442	1,536,424	1,594,566	1,967,476
August	3,011,242	1,312,953	1,493,507	1,649,547
September	1,503,108	2,841,486	1,748,778	1,998,605
October	1,510,132	2,211,461	1,730,075	1,060,597
November	2,725,166	2,292,781	2,915,765	1,396,664
December	1,100,428	566,113	1,243,593	491,590
Total	$31,532,960	$29,043,325	$30,295,838	$19,767,256

Reasons for Decrease.

Several reasons are apparent for the sharp decrease in the total as compared with 1911. When the money market tightened and a congestion of securities occurred, a large number of municipalities decided to issue short-term loans and hold their debentures for a more favorable opportunity. There are, therefore, a large amount of municipal bonds awaiting a better market and this fact naturally had a considerable effect upon the total of the sales last year.

Again, a number of debentures were offered but tenders were not accepted by municipalities as the prices were considered too low. These civic authorities then had their banks carry the municipalities.

Sold Them Privately.

Many smaller towns disposed of their bonds privately to local investors. These sales are difficult to trace, but they probably amounted to a fairly large sum last year, say $1,000,000.

Some of the largest issues during the year were as follows:—

City.	Amount.	Rate.	Term.
Hamilton	$1,762,660	4	1921-31-41
North Vancouver	657,678	4½	1931-1961
Lethbridge	750,000	.	....
Ottawa	1,031,930	4	1931-41-51
Lethbridge	623,000	4½	1942

Canadian Municipals in London.

The following is a list of Canadian municipal issues floated in London since 1908:—

1908:—

Calgary	£ 133,000
Edmonton	187,400
Montreal	1,000,000
Quebec	114,821
Regina	113,700

Saskatoon	100,000
Sherbrooke	102,700
Victoria	159,800
Winnipeg	1,500,000
	£3,526,421

1909:—

Montreal	£ 400,000
Winnipeg	500,000
Calgary	124,800
Ottawa	156,900
Toronto	394,100
Vancouver	286,400
Edmonton	187,300
Westmount	435,000
Fort William	60,000
	£2,544,500

1910:—

Calgary	325,400
Montreal	123,200
Maisonneuve	143,800
Winnipeg	500,000
Edmonton	288,000
Vancouver	453,600
Fort William	105,100
Regina	94,600
Moose Jaw	101,301
Saskatoon	88,600
	£2,223,601

1911:—

Westmount	£500,000
Maisonneuve	879,000
Victoria	117,500
Port Arthur	110,700
Hamilton	204,100
Vancouver	579,000
Quebec	215,700
Winnipeg	900,000
Calgary	414,700
Burnaby	118,300
South Vancouver	310,230
Edmonton	302,000
New Westminster	120,600
Moose Jaw	89,200
North Vancouver	130,500
Point Grey	241,470
Lethbridge	90,740
	£5,323,740

A list of the Canadian municipal flotations in London in 1912 appears elsewhere in this section under the heading "Canadian Flotations in London."

In Appreciation

SINCE 1872, when THE MONETARY TIMES published its first annual review, great interest has always been taken in this year-beginning issue. This year, however, the issue has had more hearty co-operation from writers, readers and advertisers than, we believe, has been accorded ever before to any Canadian financial paper. To our many good friends we desire to express our appreciation. Through their assistance, the reader will find in this number statistics upon which to plan for the future, words of caution from the experienced, jewels of enthusiasm from those who know Canada's opportunities. Encouraged by the improvement this year, the entire staff are already planning better things for the 1914 Annual Review.

IS ONE-FIFTH OF OUR POPULATION DEPENDENT ON INDUSTRIAL ACTIVITY?

Census Comparisons from a Manufacturer's Standpoint —Manufacturing Plants are Big Purchasers

BY R. S. GOURLAY

The census data, although gathered in 1911, was for the year 1910, so that all comparisons in facts and figures will be based on the government returns for the same year. It is interesting to note that on December 31st, 1910, the total assets of Canadian banks (which includes savings and other deposits, as well as securities at home or abroad) reached the total of $1,229,790,675. The manufacturing census returns, therefore, are the more striking when contrasted with these banking assets, for these returns indicate that in 1910 the amount invested in industrial buildings, plants and operating capital, totalled $1,245,745,496, a matter of $16,000,000 more than the total assets of the institutions which provide for the financial operations as well as carry the business credit of the Dominion.

Again, the value of the annual output from this manufacturing investment has reached the sum of $1,164,775,532, a sum which Dr. Blue, the head of the Dominion's statistical department, refers to as unique from the standpoint that the United States had a population of 50,000,000 before the value of their manufacturing output reached the billion dollar mark annually.

The total gross value of every other source of natural wealth in this great country of ours, whether it be the returns from the sea or inland lake, the returns from the forest or the mine, or whether it be from live stock or from the land in the shape of grain, roots, fruit, or other treasures of the earth, such as salt, natural gas, petroleum, clay, etc., etc., when gathered together, reached $800,000,000 or a little over, in the year 1910, so that the production of wealth from these sources was over $400,000,000 less than the gross value of our manufactured products.

Industrial Addition to Wealth.

When further statistics are made known, the annual net industrial addition to the wealth of the Dominion will be shown to be decidedly in advance of the net annual increase derived from all activities in the entire field of natural production, basic and important as these are admitted to be.

In thus referring to the sources of our national wealth it would not be fair to pass this without recalling the fact that the statistical returns indicate that the value of the raw materials purchased and used in our manufacturing plants amounted, in 1910, to $601,509,016, so that the excess value added to these by the manufacturing processes was $564,466,621, a net amount somewhat in excess of the gross value of the field crops of Canada for the same year, viz., $557,723,000.

In my judgment, sufficient consideration is not paid to the fact that the industrial plants of Canada have been by all odds the largest, most stable, and most ready purchasers of every class of our natural products. It is true that a large portion of this money is spent abroad for raw materials, but after due allowance is made for this, the fact still remains that the manufacturing plants of Canada provide the most active and largest market for the farmer, the miner, the cattle raiser, the lumberman and the fisherman, so that without this home demand the returns from these sources of our natural wealth would shrink in value very considerably.

In evidence of the foregoing might I emphasize three classes of statistics in the census report. First, in the matter of food products, we have seven groups comprising 6,985 factories, the value of whose production in the year 1910 was $26,043,612. In this group fully 95 per cent. of the raw products used was the production of Canada.

Timber and Lumber.

Then, in the matter of timber and lumber and their remanufactures, the value of the production in this class was $184,630,376, and in the matter of iron and steel products the value was $113,640,610. In these two classes a large percentage of the raw product is Canadian, so that in these three classes we have a total factory production only seventy-seven millions of dollars less than the entire cost of the raw products, domestic and foreign, used in all our industries, a comparison that is further enhanced by the fact that the raw products of many Canadian factories are the finished product of other industries, Canadian as well as British and foreign.

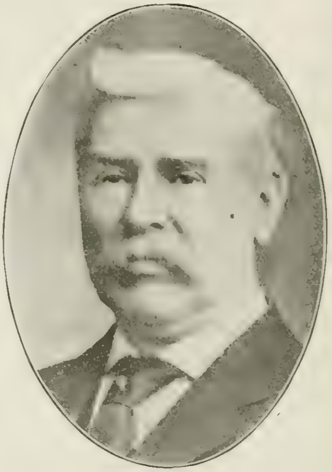
It is also interesting to note that in 1910 we had 300 different kinds of industries as compared with 264 in 1900, and 274 in 1905, a record that indicates development in the scope of our activities and also a record that indicates growth in double ratio in the last five years, whilst the outlook is that in the coming five years the ratio of development will still be in excess of the last five.

Though our export of manufactured products is relatively small yet the increase for the past ten years has been over 70 per cent. and is now about $144,000,000. It should be our aim to double these returns every five years.

Further, it is interesting to note that in the statistical tables furnished, the increase in wages is marked, the census commissioner indicating that in the matter of salaries and wages the advance is almost 31 per cent., whilst in the matter of wages alone the advance is 44 per cent. in 1910 as compared with 1900.

Strength of Industry.

In 1910 the number employed in industrial plants totalled 514,000 out of a total population of 7,231,000. A conservative estimate assumes that every industrial worker supports on the average at least two others on his or her earnings. That being so, we have more than one-fifth of our whole population directly dependent on our industrial activity, whilst the number is not less that are indirectly dependent, in order to provide for the workers' needs from the cradle to the grave and for the handling and marketing of the workers' handiwork. Our industrial activities, therefore, furnish life's sustenance and reward for fully two-fifths of our population.



R. S. GOURLAY.

In the light of the foregoing should we not depreciate any policy that fails to realize the vital bond that unites the development of our natural resources with our industrial activity, if both, or either, are to be sane and healthy.

In the body politic, the former may be the nation's heart, providing for the life blood in its ebb and flow, but if so, the latter is its nervous system, that provides its measure of strength, virility and purpose to every part of the national body, weaken, impair or shatter the latter, and the former must of necessity suffer in as great, if not a greater, ratio.

Such at least is my conviction.

◆

NEW SECURITIES IN THE UNITED STATES

For eleven months of 1912 offerings of new securities in the United States have reached the huge total of $2,091,098,500, against $1,630,012,470 in the same period last year, an increase of $461,086,030.

Following are the figures with comparisons

	1912.	1911.
Railroads		
Bonds	$ 488,074,500	$ 641,368,900

MILLING INDUSTRY OF CANADA

Good Results Were Obtained in the Past Year—Exportation Grows Apace—Future Developments and Some Possibilities Opened by Panama Canal

BY F. PAGE WILSON.

From the viewpoint of the flour milling industry of Canada, no two years could be more dissimilar than 1912 and its predecessor. And the advantage lies altogether with the year just closed. In 1911, millers had to deal with a mediocre crop; unsatisfactory not so much in quantity as in quality, the berry so full of moisture as to present many difficulties in working up, and the grade so low and uneven as to make best results impossible. They had to contend with declining prices for wheat which, with stocks of raw material already purchased, is not a factor conducive to a pleasant-looking balance sheet at the end of the year's operations.

Quality of Raw Material.

The prospects ahead of the industry could not well be better than they are now. The 1912 crop of wheat, while not phenomenally large, was splendid in quality, and the inspectors' certificates have seldom shown such a uniformly high percentage of the better grades as during the last three months. This is speaking primarily of the western provinces which, so far as wheat fame is concerned, are Canada. Ontario and further east, which, though not so well advertised and perhaps in consequence not so well known, produce in the aggregate a vast quantity of grain, but there the continued cold, wet weather reduced the quantity, and still more seriously lowered the quality of the crop.

Not only this, but the effect of the late harvest was to reduce many Ontario mills to the quandary of not having material to grind into flour, just at the time when the demand for winter-wheat flour was particularly keen.

This demand was both for domestic and for export requirements, but it is to the growth of the latter that Canadian millers will have to look for a market for the ever-increasing output of their mills. Development of the export trade has grown apace during the last few years, in apparent ratio with the decline of shipments from the United States, the result of their growing home consumption. The following figures summarize the exports of Canadian flour:—

	1909.	1910.	1911.	1912.
Barrels	1,738,000	3,064,000	3,800,000	4,000,000

Abandon Unbusinesslike Methods.

The largest portion of this went to the United Kingdom, but development is going on in the trade with other countries.

Gratifying as these figures may appear, they would undoubtedly show a greater volume if more Canadian millers would exercise ordinary business sense in their methods of consignment and in their dealings with importers on the other side of the Atlantic.

These importers strongly resent the nefarious practice carried on by a few of our millers and flour dealers of faking and ante-dating bills of lading.

This is sheer dishonesty, but there are other instances of carelessness almost equally as bad. Regularity of shipments, uniformity of quality, a common-sense following of instructions in accordance with trade customs are a few of the rules which it will be essential to conform with if Canada is to become the great flour producer of the world, which is within its power.

In the past it has been the fashion of some to look upon exportation as a sort of stand-by when the home trade happens to be slack. The larger interests in the industry know differently, and point to the fact that already the actual capacity of existing plants is sufficient for a population four or five times as large as that which Canada boasts to-day. Still, they know the potentialities of the world's markets for taking high-class flour when it is treated as a business proposition, they go on building mills.

It is not they who are losing their opportunities. Results of last year's operations would appear to indicate that mills relying almost entirely on the exportation as an outlet for their product, did about as well financially as those catering to home requirements. This is not the main point, however, for with the increase of large mills, outside markets will be absolutely essential to take Canada's growing surplus.

Difficulties Met by the Exporter.

One serious feature in the export trade this fall was the noteworthy rise in freight rates and the scarcity of space both on the lake boats and in ocean tonnage. In some cases, rates were double those charged a year ago. In view of the fact that European requirements of flour and grain have been considerably larger than usual owing to the poor crops there, the freight difficulties came at a peculiarly unpropitious time.

Meantime, the work of enlarging and improving the older mills and of constructing new ones goes on.

In the St. Lawrence Flour Mills last year was the first year of operation, and it is pleasing to note that it was satisfactory in every respect. The Ogilvie and the Maple Leaf Milling Companies will build large plants at Medicine Hat, the Western Canada Flour Mills will increase their capacity in Winnipeg by an additional 1,000 barrels per day. A new company recently incorporated in Regina will put up a 2,000 barrel mill in that city shortly, while the Ontario and Manitoba Flour Mills Company, which already has a large plant in Sudbury, will also build one at Medicine Hat, helping to make that city the greatest milling centre in the empire.

Flour Milling on the Pacific.

British Columbia, too, is likely before long, to loom up as a flour producer, two or three large establishments being planned for more or less early construction. In this connection it will not be out of place, to refer briefly to the possibilities opened up by the approaching completion of the Panama Canal. Doubtless, the potential builders of one or two large Western plants, besides those to be erected in the Pacific Province, have their eye on the lower freight rates to come through shipments east by way of Vancouver and the Panama. The Chinese and adjacent markets, augmented in opportunity by the "occidentalization of the Orient," are likewise rich in possibilities.

Mills in the East.

In Ontario and Eastern Canada, the development of the milling industry has not been so spectacular as in the West. In fact, a number of the local mills have suffered from the competition of the large companies which have become more and more aggressive. It is largely with the object of combating this competition, it is supposed, that the proposed merger of Western Ontario mills is being brought about. Whether this plan will prove successful is not yet clear; there are indications that mergers as a means of financial salvation are not quite so popular as they have been.

An item of recent interest to the milling fraternity, was the reorganization of the Canadian Cereal and Milling Company, Limited, for which, composed as it is of several well known properties, a deservedly successful outcome is hoped.

As intimated in the opening of this article, the financial results of the large mills' operations for this past year, were satisfactory and materially better than in 1911. The Ogilvie Flour Mills Company made net profits of $521,431, an increase of $37,121; the Lake of the Woods Milling Company's net profits were $457,011, an increase of $44,857; those of the Western Canada Flour Mills Company, were $264,539, an increase of $77,005; while the Maple Leaf Milling Company made $280,036, or an increase of $98,977. The St. Lawrence Flour Mills earned $62,000 for its first year of operation.

Those interested in this great natural industry of Canada hope that this year will bring a continuance and, indeed, increase in the gratifying showing. Such a result is deserved, for at the head of the business are some of the most broadminded, financially conservative, and public-spirited men in the Dominion.

MORTGAGE LOANING IN WESTERN CANADA

Efforts to Secure Money for Loans—Survey of the Situation—Established Principles Cannot be Ignored

BY A. L. CROSSIN.

It is doubtful whether the persistent efforts of brokers, company managers and directors to acquire loanable capital for the clamoring needs of New Canada is in any degree apprehended by the borrowing community. Notwithstanding the many millions of new money brought into Western Canada this year, the figures of which are not yet available, the complaint is general that money is scarce. The supply fails to keep pace with the progress of development. The growth of cities, the opening up of new territory to settlement and the enlarged needs of older communities call loudly for money. Sometimes we hear that Western Canada is borrowing too freely. This criticism would have more weight if the author could claim a personal knowledge of the rapidity of progress in the district which is the subject of his remarks.

The year 1912 has been a reasonably satisfactory one to lending companies. Collections during the early part of the year left something to be desired. It is always more difficult to collect interest in the late winter than at maturity in November or December. The season of 1911 was an unusually late one, and borrowers seemed dilatory in meeting their obligations. In time the crop was all marketed and payments found to be pretty well maintained.

Scarcity of Money was Suggested.

Early in the past year, the tendency to a slight stiffening in money rates was observable,—especially in respect of city business—and, without becoming severe, has manifested itself throughout the year.

Flotations of stock and bond issues by lending companies were not so readily taken by the English market in the spring as during the previous year. The formation of new companies was, therefore, discouraged. Older companies refused to jeopardize the position of their outstanding securities by new borrowings on less advantageous terms than those securities bore. New money from this source at least was not flowing in freely.

In the meantime building operations continued in all cities and towns, and many new records were established. Immigration continued, homesteaders secured their titles and their applications for loans for development purposes poured into the offices of the lending companies. Farm lands were changing hands at higher figures, and larger loans were asked for. There were predictions of scarcity of money.

Life Insurance Interests Visits.

The opportunity was recognized by life insurance companies not hitherto represented in this field, British and American, as well as Canadian,—attracted by the remunerative rates offered by western farm mortgages. The executive officers of these companies have visited the west in larger numbers than usual during the past year. In not every case have immediate results followed. That life companies, however, are extending their operations in mortgage loans is abundantly evident. The management of these companies do not intend to leave this fruitful field to loan and trust companies. The extent of the movement indicates a marked change in the point of view of many life officers who are becoming dissatisfied with the more modest returns offered by other forms of securities. While the western farmer or house builder may profit by this broader policy, the western municipality does not regard the change with favor. Municipal debentures have become well nigh unsaleable.

Trust Companies Lend Money.

The trust companies lent more money in the west last year than in previous years, often acting as the channel through which the individual investor in England or Eastern Canada places his funds in Western Canada mortgages. The Canadian trust companies have only recently sought in any aggressive manner to establish relations of this kind in England. Winnipeg companies have had a most important share in providing eastern investors with a trustworthy medium through which to lend money at the attractive rates prevailing in the west.

Higher Rates Have Prevailed.

Farm loan rates have been steadily maintained at seven per cent. on central Manitoba securities and eight per cent. at more remote points in the province and throughout Saskatchewan and Alberta. When opportunity is given lenders to discriminate in the selection of securities, it is not the farmer who first feels any scarcity of money. His business receives the first attention of lenders.

The builder in the larger cities has had to pay a slightly higher rate for money than for several years past. A few loans have been made in Winnipeg by the big insurance companies at 5½ per cent. and 6 per cent. During the previous year there was a tendency observable in some quarters to extend the 6 per cent. rate to other cities, but this year no loans have been obtainable at these points at less than 7 per cent.

The prevailing rate in Winnipeg has been 7 per cent., with a higher rate exacted on outlying dwelling houses. In other western cities choice business blocks have commanded a 7 per cent. rate, but the bulk of the loaning has been done at 8 per cent.

At all points loans on apartment houses and hotels have been hard to place, while difficulty has been experienced at times in securing advances on the large departmental stores—the building of which has been a feature in all our cities in the past year.

Late Crop Affects Collections.

For years the rate of interest charged on deferred payments on land sales was governed by the rate offered by the Canadian Pacific Railway Company, namely, 6 per cent. Now that the railway lands are well off the market, dealers are requiring purchasers to pay a rate of interest more nearly in line with the current value of money. Sales are now more commonly made at 7 per cent. and 8 per cent. School lands are still sold on easy terms at 5 per cent.,—a sufficient explanation of the high prices sometimes paid for these lands.

Canadian lending companies, with few exceptions, close their books on December 31st. In Ontario it is a regulation of the department that they shall do so. This is an unsuitable date for companies dealing in western farm mortgages. In a year such as the past the over-due interest account at the close of books is no true reflection of the position of borrowers. The grain crop was cut later than usual and threshing delayed for a full month by wet weather. Notwithstanding the largely increased facilities offered by railroad companies for the movement of the crop, it is getting to market later than usual, and collections are slow. Farmers of the better class are withholding their grain from market, awaiting higher prices, and the lender receives a like request for an extension of time. The yield of grain is well distributed throughout the country and the result will eventually be satisfactory.

Provinces Needs and Legislatures.

The legislatures of the western provinces continue to interfere with the free flow of capital, in violation of all sound principles of political economy. The rate of taxation of lending companies is being increased, although such companies have no franchises, enjoy no privileges and are open to the liveliest competition. Interference with the contract of mortgage has been repeatedly threatened. A statutory form of mortgage has been proposed, the purpose of which appears to be to ensure that each mortgage contains a privilege of repayment before maturity. The legislative bodies entirely overlook the urgent need of the provinces they serve for new capital to be used by the farmer in the erection of buildings, the purchase of stock and implements, or the acquisition of new land; as well as for the building of new dwelling houses in our cities, in many of which rents are now almost at a prohibitive figure.

Wealth Created by Some Authority.

The government of one of the provinces has already promised legislative investigation into what is termed the "high cost of money to the farmer." This step has been forced on the government by the demand, through the press and farmers' institutes, that the government borrow money on mortgage to be re-loaned to the farmer, a remarkable evidence of the power upon the mind, of that word government.

This agitation is perhaps only a revival of the ancient heresy that wealth is created by some authority, whether a banking institution or the central government, stamping a certificate of value on a sheet of ordinary linen paper.

Mortgage lending is not free from the inexperienced and unskilled agent or executive officer, and some amateur loaning of an astonishing character has been in evidence. Steadily enhancing values have prevented a serious collapse of the efforts of these speculators. The established principles of loaning cannot be always ignored; regard must eventually be had for the revenue producing power of the security.

DUTCH COMPANY HOLDS TWELVE HUNDRED MORTGAGES

Canada Gives Restful Opportunity for Investment of Money, Says One of Holland's Bankers

BY F. M. WACHTER

When I visited Canada last summer for the first time, I arrived there with great expectations. Much had been told to me and many things I had seen in photographs, so that I knew that I should meet there an industrious people and find a soil that would prove to be extremely fruitful. My expectations were not disappointed; on the contrary, they were exceeded. Healthy conditions, healthy people and a rich soil is what one sees, in a country that is well governed with an excellently organized system of banking.

How different is this at present from the position of affairs in Europe, where we are continually hearing of wars and rumors of war which has an unsettling effect on matters here. Thus can we appreciate the more the restful opportunity which Canada gives us for the investment of our money.

Holland has Canada's interests at heart and shows this by placing at her disposal plenty of capital for the purpose of developing the country.

Confidence of the Cautious Dutch.

In one and a half years, the Rotterdam Canada Mortgage Bank has put out $2,500,000 on first mortgages through her agents there.

They have been able to do this because of the confidence which the Dutch people have in Canada and because they know, (and the Dutchman is conservative) that the state of affairs there is exceedingly good.

Naturally it is known here that speculation plays a great part in your country, especially in town-lots and that also extravagant prices are and have been paid. But where do we not find speculation? But on the other hand, every well-managed mortgage company will select experts who will guard against any investment that savors of anything like a speculative nature.

Twelve Hundred Mortgages.

My bank now holds about 1,200 mortgages in Canada and I may safely assert that in the placing of these, not a single difficulty has been experienced, and up to now the mortgagees have without a single exception fulfilled their obligations without any cause whatever for complaint on the part of ourselves or our agents.

What we want to see is that Canada continues to develop herself as she has done up to now. Holland will then be pleased to hold out the helping hand of co-operation with her, in the granting of money and what is perhaps better, send out to her, her best class of emigrants.

◆

BECAME CITIZENS OF CANADA

In the fiscal year 1911-12 certificates were issued under the Naturalization Act to 24,128 persons, in many, and possibly most cases, the person concerned representing a family. Last year the aliens who took steps to become British subjects in Canada came from other countries as follows:—

United States	8,021
Austria-Hungary	5,098
Russia	2,787
Scandinavia and Finland	2,211
Italy	2,012
France	534
Germany	493
Roumania	442

There were smaller numbers from all the European countries, and considerable numbers,, though small, from Syria, Egypt, Japan, China, Persia, and one from Africa.

◆

NEW WESTMINSTER

Some corrections are necessary regarding the view of New Westminster printed elsewhere in this issue. The building marked "Court House," is the free library, the court house being at the extreme right hand side of the picture. The high school is not visible in the photo printed. New Westminster is making rapid strides and has become an important city of the Pacific Coast.

The Business Prospects Year Book, edited by J. Davies and C. P. Hailey, and published at 12 James St., Cardiff, Wales, price ten shillings, is one of the books which should be on every man's desk.

STOCK ISSUES IN CANADA

Preferred Stocks Were More Popular and Cumulative Feature Was Prominent

Stock issues to the public in Canada last year amounted to approximately $21,043,400, the details being shown in the accompanying table. Three of those noted bore a rate of 6per cent., thirty-two of 7 per cent., and three of 8 per cent. Forty-two were issued at par, and 8 at a discount. With 32 stock issues aggregating $10,039,000, a total common stock bonus of $3,626,750 was given.

A number of stocks yielding six, seven and eight per cent. were offered during the past year, seven per cents. being the most numerous. Preferred stocks were many, and the cumulative feature was prominent in many stock issues. When a dividend on a stock is accumulative it implies that all back dividends must be paid in full before current dividends can be paid.

Neglect of Preferred Stocks.

A Montreal brokerage house complained last month that preference stocks had been neglected to an unusual extent on the stock exchanges during the past few years, and gave as the reason the fact that a large number of the common stocks being dealt in were issued at low prices and sometimes as a bonus with preferred stock or bonds. This has given rise to a great deal of speculation in common stock, during which the prices have advanced from low figures, at which the opening sales to place, to figures, which are thought by many to be disproportionate to the price at which the preferred issues can be obtained. Trading in these ordinary shares has been going on at times almost to the entire exclusion of the preferred issues, so that the latter are at the present time available at exceedingly low prices, when security behind the issues and the guaranteed rate of interest is taken into consideration. However, the market for preferred stocks in Canada is constantly growing wider and the outlook is for more active dealing in them.

Common at Low Price.

The issue to the public last year of $4,500,000 preferred and common stock of Tuckett Tobacco Company, Limited, was made with an innovation, the preferred being issued at 95 and common at 40. Usually the common stock has gone as a bonus with the preferred.

Refinancing of Steel Enterprises.

The Toronto Structural Steel Company was refinanced, the purpose being to provide the company with funds to enable them to begin a new plant at Weston. The company's present capital of $100,000 common and $100,000 preferred stock will be increased to $500,000 common and $500,000 preferred. These securities were sold privately.

In order to obtain final and complete authority from the shareholders to proceed with the refinancing programme of the Dominion Iron and Steel Corporation, the necessary meetings of the shareholders of both the Dominion Coal and the Dominion Iron and Steel Companies were held in January, and each of the subsidiary concerns authorized the issue of income bonds covering their half of the advances to be made to the company by the $7.000.000 preference stock issue of the Dominion Steel Corporation. The shareholders of the latter company also met and ratified the preference stock issue. This meant that the directors of the corporation were given authority to issue $17,800,000 of 6% preferred stock, of which only $7,000,000 was to be issued immediately. The remainder, when issued, will be applied to the redemption of the preference stock of the Dominion Coal and the Dominion Iron and Steel Companies respectively. The proceeds from the sale of the $7,000,000 stock issued was applied to extensions in both the steel and coal plants.

The Laval Electric Company, one of the subsidiary concerns of the Shawinigan Water and Power Company, which operates around St. Rose, Terrebonne, etc., decided to wipe out its outstanding bonded indebtedness of $110,000 by issuing common stock for that amount at par to the bondholders in exchange. In addition to this issue of shares, $50,000 common stock will also be offered to the shareholders at par, bringing the company's capital up to $310,000.

8% STOCK   5% DEBENTURES

For either permanent or short term investments the securities of The Empire Loan Company are among the most attractive on the market. That the 5% short term debentures of this company, secured as they are by the deposit of mortgages with a reliable trust company, appeal to the discriminating investor is amply shown by the fact that already some $300,000.00 of Old Country Capital has been invested in these debentures.

Purchasers of the company's stock are to-day buying on a rising market and are assured not only a big interest return but a steady increase in share values. Copy of annual report and debenture prospectus will be sent on request.

UNION TRUST BUILDING, WINNIPEG, Man.

ESQUIMALT GRAVING DOCK

The length of the Esquimalt Graving Dock at Victoria dock to gate is 450 feet, level with keel blocks; 480 feet with gate on outer kerb. The width of gates is 65 feet. The depth of water varies from 27 feet to 29 feet 6 inches at springs, according to the season of year. The use of the dock will be subject to the following tariff:—

Gross tonnage of vessel.	For the first day of docking.	For each following day, including undocking day.
For all vessels up to 1,000 tons	$300.00	5 cents per ton.
From 1,000 to 2,000 tons	350.00	4½ cents per ton.
For all vessels above 2,000 tons	400.00	4 cents per ton up to 2,000 tons and 2 cts. per ton on all tonnage above 2,000.
Vessels from 430 to 450 ft. in length	550.00	
Vessels from 450 to 480 ft in length	700.00	

Possessing a large quantity of paper-making woods, British Columbia affords a promising field for the paper-maker. Pulpwood forests border the ocean and many navigable waters, simplifying transportation, and there are numerous water-powers to supply motive power to the mills. The rapid denudation of the pulp areas of the United States will soon compel it to look to Canada for its supply of wood pulp, which, according to the regulations now in force, must be manufactured in the province. There is, besides, a present demand for pulp in Japan, China and Australia, and when the industry is fairly developed, the ocean freights will enable profitable exportation to Great Britain and Europe.

◆

Several trial shipments of Canadian cattle were made last year from Vancouver and the results have been so satisfactory that Australia, one of the leading countries in the world for cattle raising, is likely to import Canadian cattle for breeding purposes to some extent in the future.

We have compiled a booklet entitled

Canadian Preferred Stocks

which is one of the most complete manuals dealing with this class of Canadian stocks that has ever been published. This booklet gives in concise form all the information that is necessary in forming an opinion of the investment value of each preferred issue dealt with, including—

- History of the Company
- Its Physical Properties
- Capitalization
- Particulars of Preferred Stock
- Margin of Earnings over Preferred Dividend
- Assets behind Preferred Stock
- Directors

We would be pleased to mail a copy free on application

HOW A LADY INVESTOR HAS MADE TWENTY-FOUR HUNDRED PER CENT.

On Her Canadian and Other Investments—Says Arithmetic and Commonsense, Not Gambling and Luck, Were Her Aids—Has Faith in Canada, and Asks for Clean Politics There

[The following article is from the pen of a French lady, resident in the United States and a reader of The Monetary Times. Her thoughtful inquiries addressed from time to time to this paper respecting various Canadian companies, their stocks and bonds, led to a request for a contribution to this issue describing her investment experiences, methods and success, for the benefit of other lady investors. The author's name is withheld at her request, as "otherwise your readers would certainly believe that I am a professional financier looking for clients, and I might be deluged with letters asking for advice—or worse, that I seek notoriety." The story speaks for itself. Incidentally, it will be found of considerable interest to men as well as women investors.—Editor *The Monetary Times.*]

I had hardly entered my twenties, when the unexpected death of my husband threw on my young shoulders the duty incumbent to parents of young ladies in France: "To pile up a dot" for my baby daughter. Fortunately I possessed a fair knowledge of arithmetic, a good judgment and a great sangfroid.

"There has been no gambling, no luck, no supernatural power of diagnosis in my investment success."

Our disposable worldly assets were moderate; my ambition for the baby was great; and I was perfectly ignorant of the manipulation of securities. And to pay for my future experience as cheaply and adequately as possible, I invested a few dollars in subscriptions to independent financial papers, and in postal stamps to collect all literature issued by financial promoters and their gaudy prospectuses. I discovered quickly that most of the proposals of promoters are nothing but schemes to get money away from hard-working people, and with them, everything ends when they have caught enough fish in their nets to satisfy their voracious appetite; that flowery advertisements with beautiful pictures, "ground floor propositions," mining and oil bonanzas requiring just a little money to be promoted, etc., were the usual bait to fish up their booty; that powerful banking interests gobble in one minute most bona-fide propositions, never allowing small investors to have a chance to participate in anything susceptible to give large profits. I discovered that one must keep carefully out of new ventures, if not willing to take the risk to purchase wall papers at tremendously high figures and above the prices one could secure them in departmental stores.

So I had little to do with these lines, not much either with the dealings on margin on the stock exchanges. Literature of brokerage houses dealing in such operations proved for the most part as fallacious as the showy advertisements of promotion houses. They offer the opportunity, with a payment on 10 shares only, to buy one hundred shares of a stock bound to go up ten per cent. within one month, and so to double capital. But every time something went wrong, and the margin was swallowed.

I had to conclude that the only safe way to invest was to look after bonds or the preferred stock of strong public utilities, or in industrial corporations, honestly managed, officially listed, giving a fair income, and underpriced without normal causes, thus affording a good chance of plus-value.

The Spanish-American war, just started, proved to be the foremost example that safety, fair income and certainty of immense plus-value, could easily be found in the same security by a calculating mind.

Debtor of the Spanish Nation.

I had studied history enough to know that Spain had been depopulated and ruined by her colonies, to know that continuous rebellions in Cuba and the Philippine Islands cost her treasury hundreds of millions yearly, and that it would save her finance and promote her wonderful mineral and agricultural wealth if she could only get rid of these barnacles. So the most elementary good sense required that each one of her defeats in battle were greeted by an advance on the price of her government bonds in all European Bourses. But because of the nervousness of their owners and their strange aberration, the bonds dropped each time more and more.

When it was reported that United States would keep Cuba and Philippines (a piece of news which should have made the Spanish government bonds worth par) they dropped at 32 per cent. I jumped at the opportunity and invested all my worldly goods in Spanish 4 per cent. gold bonds, perfectly satisfied to have as debtor the Spanish nation, and to wait the advance of my bonds with an income of more than 12 per cent. They went at par more quickly than I had supposed, but I sold at 96, when trebling my invested money.

Some of the opportunities I was later able to clasp, are not less typical than the above to which I have referred. For instance, one must remember the terrific explosion which seven years ago cost so many lives in a north of France colliery company. The next day, shares of stock poured on the market, and they dropped from 700 per cent. above par to 300 per cent. If any of these sellers had stopped to think that the enormous indemnities due to the families of the dead or crippled victims would be paid by insurance companies, and that the material losses were only a foreseen occurrence cared for by millions of reserve funds, none would have thrown away his holdings at a loss of 400 per cent., to buy them back a few months later at former prices, and a little later at even 100 per cent. above.

Mexico's Revolution and Investments.

Again, when in January, 1910, the Metropolitan of Paris (Subway Railroad) was flooded by the overflow of the Seine River, the nervousness of most of its shareholders caused a falling down of 200 francs per share (of 250 par value) or 25 millions all told, because of a damage of about one million falling upon the treasury of the city of Paris, owner of the road operated by the company as lessee. And was it more considerate a year ago to throw on the market the shares of the Mexico Tramways because a few hundred men were in rebellion 1,800 miles away in the north, causing a fall from 730 francs to 580?

One must always be upon the watch to be able to catch all opportunities, and when handling quite a sum of money it becomes a trade by itself to take care of it, and I should say a very absorbing trade. Bear in mind, indeed, that if a security looks attractive to one, one must collect a full file of information, carefully analyze the company's five or six last statements, compare the figures, weigh the future of the corporation in its own and other countries, as there is always more or less to learn from comparison; the shrewdness of its management; the standard of morals of its directorate, etc. And, in addition, one must always be on the safe side and diversify investments, both at home and in foreign

countries and far away lands; scrutinize all reports and hearsays referring to corporations, the securities of which one owns, or would like to own. It is a tremendous work, a piece of work, however, which finds its reward when financial panics, as the recent one in Paris, or five years ago in New York, can let one perfectly undisturbed.

Waiting for Plus Values.

As a Parisian, I am naturally interested in French securities, and they certainly dropped a few points late last year. What is the difference to me? I cashed my interests, and if, perchance, I cashed a few francs less, they were made good in the United States or in Canada, because all commercial or industrial declines on the other side will bring a corresponding increase on this one. Even the possibility of a general European upheaval left me financially cold, as three out of my five French holdings refer to corporations operating in European countries which will not be involved in the entanglement. It will have to wait for the expected plus-values, that is all. And certainly compensations will come from another part of the world, having forced upon me the burden to look after as many interests in the United States, as many in Canada, then in Central and South America, in Mexico, and a few thousand francs each, in South Africa and Australia. Why I took an equal interest in Canadian investments, as in my own country, or in Canada's powerful neighbor, the United States, can easily be understood.

The magnitude of Canada's virgin lands; her wonderful mineral richness; her practically inexhaustible forests, her unlimited cheap power provided by all her rivers' falls; everything points that Canada will be the country of the twentieth century, as the United States has been the country of the nineteenth. And very much more easily and quickly if her statesmen are aware that "Honesty is the best of policies," because she will attract immediately the tremendous amount of money actually in existence in Europe, and especially France, and which was not even dreamed of a century ago.

Attractions of Canadian Investments.

Mature examination shows that her statesmen belong to the good school. Her representatives abroad are carefully securing the best class of immigrants, looking above all at their quality, not their quantity, certain, however, that quantity will soon keep pace with the quality. So if her corporations are quite young and are not backed by years of prosperity as in the old countries, there are compensations in the matters of immediate interests and near future plus-values. Her Canadian Pacific Railway has proved the most successful railroad undertaking of the present generation; her national banks are amongst the sanest known. Her cities and towns are growing giants. Her crops are all wonders. Then, why should not her public utilities corporations be as safe as in other countries? Why her bank shares not as desirable, her pulp and paper factories not preferable as forests become exhausted everywhere except inside her boundaries. Why her steel and car foundries not rival in prosperity the similar factories in the United States and Europe, when she is at the very eve of her tremendous railroad development?

Only one condition besides is needed now to secure rapidly the sinews of peace which will place her to the front of all modern nations—the most scrupulous honesty of her statesmen. Why should she not have it, when they are aware that honesty is the best of policies and politics.

So, you see, there has been no gambling, no luck, no supernatural power of diagnosis in my investment success; but only arithmetic, reason, commonsense, cold calculation and endless labor. That labor, however, finds its remuneration—if you bear in mind that had I to settle to-day accounts of guardianship, I would turn out 25 units against each one received sixteen years ago.

◆

The British Postmaster-General's report shows over two thousand tons of newspapers and magazines were sent to Canada direct in one recent year three hundred tons of letters and post cards, three thousand tons of printed papers and samples, and half a million parcels, as against sixty-six thousand sent ten years ago. Money orders sent from the United Kingdom to British North America were valued at £[illegible],000. Over two and a quarter million pounds went to Great Britain in money orders from Canada.

REGINA

THE CAPITAL CITY OF SASKATCHEWAN

Regina has commended itself to the conservative investor, for a number of years, in a way that is different from all other Western cities. Its development and progress have always been in advance of the rise in value of city property. This city has not yet been boomed. Today, more than ever before, Regina is offering exceptionally good opportunities for investment. Its new six, eight and ten-storey buildings are an actual proof of the permanence and solidity of the huge business carried on in this, the largest city in Saskatchewan. Its growth in population at the rate of over 10,000 per year is the guarantee of increased property values. Write us for further particulars. We have been established here for over ten years, and any information that we furnish you will be reliable.

FROM A MORTGAGE LOAN STANDPOINT

Soundness of Vancouver Real Estate Considered in That Relation—Sound Basis Established for Valuations

BY D. VON CRAMER.

The loaning of money upon the security of real estate is among the most ancient and conservative forms of capital investment. Absolute safety rather than a high rate of interest has always been the principal consideration in placing a mortgage loan So long as the slightest doubt exists as to the permanency of the estimated value of the security offered, capital is bound, through its advisers, to look askance.

The ship of capital rarely cares to venture into new channels until these channels have been safely charted, and its pilots duly equipped with the necessary information to enable them to avoid the rocks and shoals which may exist. After this stage has been reached, the only remaining precaution required is to watch the financial barometer. The satisfactory placing of loans thereafter should be plain sailing.

D. VON CRAMER.

These pilots of capital consist largely of the staffs of the important financial institutions such as the banks and trust companies. The tremendous responsibility incurred by these officials in directing the investment of the funds placed in their charge largely by that helpless class of investors so often referred to, whenever a bank or a trust company closes its doors, as the "widows and orphans," naturally makes them extraordinarily careful. In addition to this, they have at their disposal information, statistics, and recorded and classified experience, gathered from the four corners of the earth. Even when these experts finally decide that a new field has made good, it is often years before they give it their entire confidence.

Some Certain Indications.

This stamp of approval is almost invariably indicated by the institutions referred to above purchasing real estate freely, and establishing themselves in permanent quarters owned in fee simple. The extent to which this is done, and the prices paid, are as certain indications as it is possible to find of the confidence felt in the future of any particular field for investment.

The example of the city of Vancouver is a striking illustration of this gradual evolution. As the terminus of a great transcontinental railway system, it was thought from the first that a bright future was in store for it. Financial institutions, however, do not care about lending much money on futures, and although a considerable number established branches, nearly all were content to occupy rented premises for many years. As time went on and real estate values began to rise, these institutions, particularly the banks, did all they could to discourage speculation in it. In fact, so tightly did they draw their purse strings that for years legitimate and profitable investment was greatly hampered. As a result of this policy or rather in spite of it, the growth which steadily went on, was of the soundest possible character, until at the present time there is no city on the continent where values of central real estate are more firmly and conservatively established than in Vancouver.

The irrefutable proofs in support of this statement are shown in the enormous, and constantly increasing, investments, by the banks and trust companies, in that class of property These various institutions have for some time been competing, one against the other, for desirable sites, and are almost daily establishing new high record prices. Only a few weeks ago the Royal Bank of Canada paid $5,625 per front foot for the corner of Granville and Hastings Streets. This was a record at the time. Since then the ultra conservative Dominion Bank has gone its competitor several better by paying $6,000 per front foot for the corner of Granville and Dunsmuir Streets.

To illustrate the fact that the values are by no means confined to any one particular section, it may be pointed out that the Royal Bank also bought a small inside lot for one of its branches, nearly a mile east of either of the corners mentioned, at a price of $3,000 per front foot. The well-known Credit Foncier Franco Canadien also has recently purchased, for cash, 52 feet on Hastings Street, considerably west of these corners, for $100,000 In fact, every financial institution of importance in the city, either has purchased, or is in the market, for suitable sites both for its head office and its branches.

Sound Basis for Valuations.

Probably the most important result of this position taken by the big interests is to establish a sound basis for valuations for mortgage loans on real estate. Whereas a year ago, it was difficult to show that a certain piece of property offered as security would justify the value put upon it by the applicant, it is now a comparatively easy matter to compare its position and other advantages with a more or less recent purchase, made for spot cash, in the same vicinity by some big corporation.

There are three important reasons why the present is an exceedingly favorable time to invest in mortgages in Vancouver. First, the margins on present valuations are much larger than in Eastern cities. Second, the rate of interest which can be secured is considerably higher. Third, the annual increase in the unearned increment value is astonishingly steady. This does not apply to what is known as Greater Vancouver, although the values at many points are decidedly conservative, but it does apply to all that portion lying within the city limits. Vancouver is a remarkable city for its compactness. Practically every foot within its borders is built upon and its thriving suburbs extend for miles.

◆

HUNDRED MILLION DOLLARS TO NAVY

Sir Henry Pellatt Says That Would Not be Too Large, Regarded Even as Insurance Only

Referring to Sir Henry Pellatt's interesting article on page 162 in this section, respecting British visitors to Canada last year, since the introduction of the Navy Bill at Ottawa, Sir Henry desires to add:—

"The recent grant of thirty-five million dollars to the British Navy will encourage favorable legislation in England of the kind referred to, or at least favorable action towards Canada whenever possible. I wish the grant had been one hundred million dollars. Canada is a ripe plum among the peoples of the earth. If destruction came to Great Britain, Canada could never become a nation, as the United States or Germany would take her. Therefore, one hundred million dollars would not be too large regarded as insurance only. However, the present grant is in the right direction, and does credit to the Government. It shows unmistakably the unalterable devotion and loyalty of Canadians to the Mother Country. It is the first practical evidence in money of it, and it will give an impetus to things Canadian and things Imperial, which will be an object lesson to the whole world."

◆

New canneries are being erected on Queen Charlotte Islands and at other points, following the demand for the cheaper descriptions of salmon, while many of the new companies are also making preparations for halibut, cod and herring fishing, which may become an important industry. The catch of these fish shows a general increase, while the whaling business has already been established on a large scale.

CORRESPONDENCE SOLICITED

NEW INCORPORATIONS

More Than Four Thousand New Companies Obtained Dominion or Provincial Charters Last Year—Over a Billion Dollars of Authorized Capital

During the twelve months of the past calendar year, 4,651 new companies secured Dominion or provincial charters. The total authorized capitalization of these companies was $1,245,927,701. The largest number of companies was chartered during the week ended September 21st, when 158 federal and provincial charters were granted. The largest aggregate authorized capitalization for one week was that for the week ended July 13th, when the figures were $137,231,000.

The following table shows the number of companies with individual capital of $1,000,000 or more:—

Capital in Millions of Dollars.	Number of Companies.
1	147
1½	28
2	42
2½	5
3	14
3½	2
4	4
4½	1
5	17
6	5
6½	1
7	2
10	7
15	1
25	1
30	2
120	1

The geographical division of the new companies is shown in the following table, which gives the number of companies with head offices in the various provinces:—

Province.	No. of companies.	Aggregate capital.
Nova Scotia	3	$ 2,600,000
New Brunswick	748	13,824,200
Quebec	825	337,808,358
Ontario	1,313	485,274,400
Manitoba	467	82,340,000
Saskatchewan	432	40,966,875
Alberta	698	101,631,383
British Columbia	834	181,432,485
Yukon	1	50,000
Total	4,651	$1,245,927,701

The following table shows the number of companies which adopted the cities named as their head office:—

Number of companies.	Head office at
19	St. John
51	Quebec.
69	Moose Jaw.
77	Regina.
82	Hamilton.
84	Ottawa.
123	Victoria.
236	Calgary.
290	Edmonton.
498	Vancouver.
528	Winnipeg.
597	Montreal.
655	Toronto.

The following is a list of companies with authorized capitalization of $1,000,000 or over, incorporated during the past twelve months:—

Abitibi Pulp & Paper Company, Montreal	$5,000,000
Abitibi Pulp and Paper Mills, Toronto	3,000,000

PORT ARTHUR

ONTARIO

Port Arthur offers greater inducements to the investor today than any city in Western Canada.

We specialize in investments for English clients visiting Canada who, being unable to study local conditions and market values owing to the short time at their disposal, require the services and advice of a thoroughly reliable firm.

Write for particulars of some of the best investments in inside property, residential lots and acreage, to

The Alberta Land Company, Limited
Port Arthur, Ontario
Head Office .... Dacre House, Arundel Street, Strand, London, England

Builders *Contractors* *Auctioneers* *Real Estate and Insurance*

E. J. B. DOBIE

Port Arthur

REAL ESTATE INVESTMENTS

Business and Residential Sites.

Trackage, Warehouse and Factory Properties.

City and Suburban Acreage for subdivision.

Maps and information, free of charge, supplied upon request.

I have numerous opportunities for investment of funds at 7% interest on first mortgage on first-class properties, with from 40% to 50% margin of security.

Correspondence Solicited.

4 St. Paul St. - Port Arthur, Can.

Regina Investments

We have acreage surrounding Regina in all directions at reasonable prices and terms; also business, semi-business and choice residential properties, and cheaper properties for workmen's homes; also good revenue producing properties. We would be glad to submit propositions in either class and give all information possible.

Saskatchewan Farm Lands

We always have a good selection of choice Farm Lands both improved and unimproved in all parts of the Province, principally on C.P.R. Main Line, Arcola branch, and C.N.R. Regina-Prince Albert branch. Write us for a few good samples.

Peace River Lands

We have a choice block of about 85,000 acres in the celebrated Peace River Valley adjoining the famous Grande Prairie District. This land has all been well selected out of a very large tract. Price only $9.50 per acre—$3.50 per acre cash, balance 4 annual payments, interest 6%.

All correspondence will receive our personal attention.

BROOK & ALLISON
Box 94 ... ... REGINA, SASK.

Reference—Dun's or Bradstreet's, Mercantile Agencies, or Royal Bank of Canada

There were several common stock listings in excess of $2,000,000. The total of the preferred stocks probably created a new record for one year's listings, the $95,000,000 issue of the Brazilian Traction Light and Power Company being responsible for that and also for Toronto's high total. The Spanish River Pulp & Paper Company made two listings of common stock, five listings of preferred stock, and one of bonds on the Montreal Exchange during the year, and two of common and preferred both, on the Toronto Exchange. The preferred stocks total includes a listing of $16,000,000 debentures of the Montreal Tramways Company. The Canada Car and Foundry Company listed £123,280 sterling bonds. The remainder of the bond issues were currency.

◆

Canadian manufacturers of newsprint took considerable tonnage from United States producers in new contracts last year.

Statistics recently published of Switzerland show the tendency of the Swiss people to save their money, and also serve to show the healthy financial condition of the majority of the Confederation's inhabitants.

We want investors on our side of the Atlantic to feel that in putting their money into Canada they can do so with perfect safety, and with every assurance that both principal and interest will be promptly paid. And, above all, that the money is being used for legitimate purposes, and for building up the Dominion, which is already recognized as being one of the bulwarks of our great Empire.—Lord Strathcona.

"WHAT TO DO WITH MONEY"

is the name of our latest booklet. It tells about our 5% Debentures.

If you have $100 or any multiple thereof, you can get interest at 5% per annum, payable every six months, by buying debentures. You can get your money back plus accrued interest, by giving 90 days' notice, should an emergency arise.

If you have $1.00 or more, you can get interest at 4% per annum, paid or credited every three months, by depositing the money subject to withdrawal by cheque. It is profitable to do business with us.

The deposits and debentures of this Company are especially authorized by an Order-in-Council as an investment for trust funds by Trustees and Executors.

EXCELLENT FRUIT CROPS

Bountiful Yield Was Obtained Throughout the Country —A Record Pick of Pear Crop in Ontario

Canada gathered a splendid fruit crop last year. Mr. A. S. Chapin, apple broker, Toronto, gives the following estimate of the apple crop of 1912 as compared with that of 1911:—

The total quantity of barrels of apples packed in the United States and Canada in 1911 was 33,000,000 barrels. The estimated quantity in 1912 is 40,000,000 barrels. The following are the Canadian figures:—

	1911. Barrels.	1912. Per cent. of 1911.
British Columbia	100,000	185
Nova Scotia	1,700,000	60
Ontario	1,600,000	150

One incident of the fruit-growing power of the country is related by Mr. N. T. McMurray, near Sarnia, Ont. From ten twelve-year-old Clapp's Favorite pear trees, he picked last fall 186 eleven-quart baskets of pears, which sold for 50 cents a basket, bringing in $93. From a nine-inch section of one limb a basketful was picked. As these trees are planted 16 feet apart, there would be about 170 on a solid acre, which would mean a crop of 3,162 baskets, worth $1,581.

Consumer and Grower in Contact at Covent Garden Market, London, Ontario.

The Fruit Branch at Ottawa, to assist in estimating the marketable crop, divided the fruit districts of the Dominion as follows:—

District No. 1, counties north of Lake Erie; No. 2, counties on Lake Huron and inland to York county; No. 3, Lake Ontario counties north to Sharbot Lake and Georgian Bay; No. 4, Ottawa and St. Lawrence Valleys to Lake St. Peter and south-western Quebec; No. 5, New Brunswick, with north-eastern Quebec; No. 6, Hants, Kings, Annapolis and Digby counties, Nova Scotia; No. 7, Nova Scotia not included in District 6; No. 8, Prince Edward Island; No. 9, lower mainland and islands, British Columbia; No. 10, inland valleys, British Columbia.

	Districts.

Cranberries	.	..	..	..	64	..	85	..	..	..
Blueberries	..	..	..	..	88	..	66	..	..	..

Districts 1, 9 and 10 ship the commercial crop of peaches and other tender fruits.

Districts 1, 2, 3, 6, 9 and 10 grow plums, pears and winter varieties of apples for long-distance markets and export.

District 4 ships Alexander, Wealthy Fameuse and McIntosh Red apples

Districts 5 and 7 will not produce sufficient winter fruit for home consumption

Fruit-growing in Canada has passed through various stages in the course of its development, from the days when the early pioneers planted a few seeds in their little clearings in the woods until the present time when it has taken its place as one of the most important phases of the agricultural industry of the Dominion.

It has been a matter of surprise to many people of other countries to learn that the vast country situated north of the 49th parallel and the Great Lakes can not only grow fruit in large quantities and in widely distributed areas, but as a matter of fact produces the fruits of the temperate zone in the most abundant manner, of the highest quality, and with such regularity and freedom from uncertainty as to make the undertaking from a commercial standpoint one of the safest and most profitable branches of agriculture This statement, made by Mr. W. Bunting, who recently reported on the industry for the Dominion government, should be qualified with the proviso that judgment be exercised in the first instance with regard to the selection of the varieties of fruit to be produced, the markets to be catered to, the available means of distribution, as well as the existing soil and climatic conditions.

MINING ACTIVE IN ONTARIO

Cobalt and Porcupine Alone Produced a Value of Nearly Twenty Million Dollars

Some new records were made last year in the Ontario mining field. Official figures for nine months of the past year are available, and in that period, from January 1st to September 30th, the yield of gold was more than double in value that of any preceding twelve months. The statistics of production for the nine months' period furnished to The Monetary Times by the provincial bureau of mines are as follows:—

Product.	Quantity.	Value.
Gold, ounces	53,488	$ 1,117,335
Silver, ounces	22,231,451	12,707,826
Copper, tons	8,019	1,142,076
Nickel, tons	15,907	3,368,437
Iron ore, tons	37,265	101,284
Pig iron, tons	452,021	6,051,978
Cobalt in crude material, pounds ..	711,180	176,786
Cobalt and nickel oxides, pounds ..	711,180	176,786
White arsenic, pounds	2,944,104	66,316

Nearly Twenty Million Dollars.

According to estimates made by Mr. S. H. Logan, of Cobalt, the silver and gold production of Cobalt and Porcupine for 1912, will be valued at $19,900,000, $2,000,000 being contributed by the comparatively new Porcupine camp. Mr. A. A. Cole, mining engineer of the Temiskaming and Northern Ontario Railway, gives a similar estimate for Porcupine. The bulk of the gold was from the Hollinger and Dome mines. Other contributors were the McIntyre and Vipond at Porcupine, and the St. Anthony at Sturgeon Lake. The Cordova mines in Hastings county and the Olympia at Lake of the Woods also turned out bullion.

Large Silver Output.

As compared with the corresponding period of 1911, the production of silver was 963,601 ounces less in quantity, but $1,114,090 more in value, silver being now much higher in price than last year. The productivity of the silver mines of Cobalt is being well maintained. The shipments comprised 15,408 tons ore, 7,859 tons concentrates and 2,239,124 in bullion. South Lorrain contributed 616,692 ounces to the total and Gowganda, 449,281 ounces.

The mines of the Sudbury district yielded 15,907 tons of nickel as compared with 12,711 tons during the same period last year, and 8,019 tons of copper as against 6,769 tons. Both these metals are estimated in the form of Bessemer matte produced by the blast furnaces, constituting together about 80 per cent. of the matte by weight.

Iron and By-Products.

Considerably less iron ore was shipped during the nine months of 1912 than during the same period of last year, the reduction amounting to 135,603 tons. The Helen mine was the principal producer. On the other hand, the output of pig iron shows a large increase, being 452,021 tons as against 296,856 tons last year.

The refining works in Ontario produce arsenic, cobalt crude materials or residues, and the oxides of nickel and cobalt. Shipments amounted in value to $300,716 as compared with $125,907 for the corresponding period of 1911 Both, the European and American market for cobalt oxides are now for the most part supplied by the product made from the ores of Cobalt.

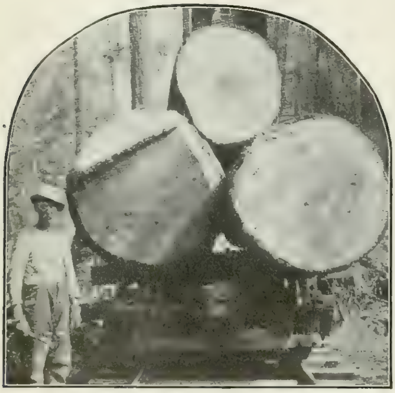
CONSERVE BRITISH COLUMBIA TIMBER

Expert Predicts Increase in Cost of Stumpage and Prices of Lumber

BY T. F. PATERSON.

Much has been said and written during the last ten years regarding the position which British Columbia holds both as to the extent and quality of its timbered area and the prospects for adequate returns for the manufacture of its timber resources.

Up to the present time any information, especially that regarding the quantity of timber the province contains, has been largely a matter of conjecture. For the five years preceding 1908, a large area of the available timber lands of the province was staked under what is known as special timber licences. Over 17,000 square miles of the best available timber lands, outside of what was previously held under crown grant and leasehold, were staked, and in many instances this was done with little or no concern as to whether they overlapped adjoining licences; or in isolated areas, whether there was available timber land for the area described. Most of the staking was done in a haphazard way. Now when surveys have to be made, it has been found to the surprise of many timber holders that their holdings are much smaller in area than they had anticipated or had overlapped adjoining licences owned by other parties who had staked previously to them. The provincial government therefore in many cases was, and is now getting double, and in cases, triple rental on the timbered area supposed to be owned by one licence.



Three New Year's Logs from British Columbia's Forests.

As a revenue producer, the licensing of timber lands in British Columbia has been a bonanza for the provincial government and the money derived from this source has been the greatest factor in placing this province in the sound financial position it holds at present. Up to 1905, the revenue from timber sources had hovered around $500,000. In three years, it had risen to over $2,000,000. The treasury at Victoria was overloaded and urgent appeals were made to the government to disgorge and invest the money in permanent public works, etc. The consequence has been that large amounts were spent in opening the province for settlement and made possible a reduction of taxes levied from other sources.

During 1912, a forestry department was established by the provincial government. It is one of the duties of this department to make a careful estimate of the timber area yet in the provincial reserve placed on the balance of the timbered crown lands of the province. This will take a number of years and will entail a large expenditure of money. The greater percentage of the area held under special timber licence has as yet not been surveyed and it is a matter of conjecture as to what most of this contains in the way of quality and quantity of timber. It is the opinion of many timber experts who from time to time have cruised much of the supposed timber area of the province that at least fifty per cent. of the area now held as timber land will prove disappointing when cut.

Most of the timbered area, and especially so on the northern mainland coast, lies in somewhat narrow valleys. The timber in the lower areas is as a rule good and grows gradually smaller in size as it reaches the higher altitudes. Were all the timber on the area on comparatively level or rolling land a much greater percentage of it could be logged. As it is, a large percentage of the smaller timber, from eighteen inches on the stump down, cannot be logged profitably at the present time, and it is questionable whether it can be for many years to come.

Where the country is steep and rocky much of the timber, either large or small, cannot be felled without great loss from breakage. The writer has logged limits in which it was estimated that from twenty to twenty-five per cent. had to be left on the ground owing to breakage and his cruisers have investigated large areas now held under licence on which the report showed conclusively that at least fifty per cent. of the timber could not be felled without serious breakage. Even if it were down, the only way to put it in the water would be some contrivance embodying the principle of an aeroplane.

Facts of the Case.

It is the intention of this article to give an idea of the actual timber and timber area of British Columbia. There has been so much exaggeration in the press as to its extent and quantity that the business public should know the facts. The statement was made before the forestry convention, recently held in Victoria, to the effect that the increase in growth of the timber of British Columbia each year was approximately six billion feet, and that the available timber produced in this way each year was much more than the province could hope to cut in any one year for many years to come. If this were so, the writer would consider that it was poor policy to hold timber land in this province.

The facts are that stumpage on available timber, with the most modern methods of logging, has advanced from fifty cents per thousand feet to two dollars and on some selected crown granted areas the stumpage has reached three dollars per thousand feet. This would not seem to indicate that good timbered areas were easily obtainable. The holder of good timber in British Columbia need not despair as to whether or not his investment is a good one. If he has timber of fair quality and quantity situated on ground which will allow logging same at a reasonable cost, he is just as safe in making a good return on his money as if he has invested in Ontario or Eastern timber land some few years ago. All adjectives such as inexhaustible, enormous, etc., which are generally applied to the timber resources of British Columbia can be discarded. The next ten years will show a great increase in cost of stumpage in British Columbia and prices of lumber from this time forward will have a tendency to advance. To the timber holder unhesitatingly I would say "Conserve your timber."

HEAVY RAILROAD CONSTRUCTION

To be Carried Out This Year Will Stimulate Rail Mills, Iron, Steel and Other Industries

BY SIR THOMAS SHAUGHNESSY, C.V.O.

Notwithstanding the large amount of railway construction in Canada during the past year, there is every indication that quite as much will be required during the coming year. This means a great deal for the country because, beside giving employment to many thousands of men in the making of the railways, it naturally stimulates manufacturing in the rail mills, iron and steel works, lumber mills and a large number of other establishments, and keeps the wheel of national prosperity spinning.

Speaking for our own company, the rail requirements for the next year will approximate 250,000 tons, and these, with the requisite fastenings, will represent an expenditure of over $8,000,000.

During the past year, in addition to keeping our own manufacturing shops occupied to their capacity, we have taken all the cars and locomotives that we could have built in Canada, and have also made large contracts with manufacturers in the United States. At the present time our outstanding orders for cars and locomotives, to be delivered before the end of 1913, aggregate $30,000,000, and a very large proportion of this amount will be spent in Canada.

Then there are the other works, to which reference was made in the annual report. The extension of our double track system East and West, the important terminal works at Montreal, Toronto, Winnipeg and Vancouver, and the large locomotive and car works at Ogden, near Calgary, that will involve the employment of very many men, and the use of a great deal of material.

We fully recognize the transportation necessities and claims of the country and it is our anxious desire to meet them in so far as the obligation rests with our company, but our operations are frequently delayed by conditions that we cannot overcome, such as an unfavorable season and a shortage of men and material.

My own feeling is that, surveying the situation conservatively, the year 1913 will be replete with development, progress and prosperity for Canada.

ALVO. V. ALVENSLEBEN, Limited

BROKERS, &c.

VANCOUVER, BRITISH COLUMBIA, CANADA

MERCHANTABLE TIMBER OF BRITISH COLUMBIA Report of the Royal Commission of Enquiry on Timber and Forestry, 1910, shows that there is a forest area of 15 million acres in British Columbia, or about one half of the entire timber acreage of Canada, capable of yielding nearly 200 billion feet of Merchantable Timber. Compare with these figures the fact that the United States cut during the year of 1910 alone, almost 50 billion feet, and the value of our timber will at once become apparent.

We have our own staff of Cruisers, and are prepared to cruise for interested parties. Our guarantee stands behind any of our Reports.

MINING We have the greatest confidence in the coal development on the Pacific Coast and in interior of British Columbia, and have secured the services of an eminent German mining engineer to advise us on any propositions that are put before us. We are also in a position to give detailed information of any of the Mining Companies registered on the Vancouver Stock Exchange.

REAL ESTATE We believe that present values in the cities of Vancouver, Victoria and North Vancouver will show good profits in a comparatively short time. We have many revenue-producing properties in the centre of these cities, and are generally in close touch with the situation, seeing that we have offices in all these cities.

MORTGAGES First Mortgages—Rates of Interest from 6 to 8 per cent. We also recommend the buying of Agreements of Sale as a very safe form of Investment.

WESTERN CANADA ON SUBSTANTIAL FOUNDATION

Railroads and Crop Movement—Movements of Grain by Months—Position at the Lake Terminals

BY A. E. BOYLE

The degree of prosperity enjoyed by the western provinces during 1912 seems to have fulfilled the expectations of those who understand the nature of the foundation upon which the business structure rests. There is an imposing array of statistics which bears ample testimony in favor of the conclusion that all has been well in the newer portion of the Dominion. People who are familiar with what is going on are confident that a healthy rate of development has been maintained, and they believe that a generally satisfactory state of affairs will continue indefinitely. It is not denied that some unfavorable tendencies have manifested themselves, the undue exploitation of farm lands as suburban residential property being conspicuous in this connection. It is not possible to attain perfection in the building up of a new country, however, and one is apt to feel grateful because legitimate trade has prospered in the face of any disturbance that may have been created by unwise speculation in land. There are no signs pointing to a proof that the real estate situation is relatively worse than it has been in other seasons, while there is ground for supposing that on the whole it is in better shape than ever before.

Success of the Railways.

The success of the railways in handling the crop movement has been the feature of the year's development. Too much praise is not likely to be showered on the transportation companies in this regard, because the public expects much from them. Enconiums will be scarce, too, on account of the fact that the railways have made only partial atonement for the short-comings of other seasons. It is not necessary to rack one's brain to find a period in history of the country when they fell far short of doing their duty in the forwarding of the exportable surplus of grain. The balance of the blame rests upon them still, and there is therefore an exceptional opportunity to pay tribute to their foresight and skilful management.

They have labored under many disadvantages, and their achievements are little short of remarkable when one compares them with the records of the past. The amount of energy that is involved in sending forward 70,000 cars of grain in less than three months can be appreciated only by those who have come into close contact with the difficulties attending modern transportation. Even this statement does not convey an accurate idea of what has been accomplished. The railways actually moved 64,400 cars in a period of eight weeks beginning October 1. That is a record which compares favorably with the achievements of any group of railways in the world, when the distances covered by the movement are taken into account.

Crops and Western Welfare.

The close relation which efficiency in the movement of the western crop bears to the commercial welfare of the West, and indeed of the country as a whole, is well understood, and it is little wonder that the business community is more than pleased with what has been accomplished. The chief obstacle to the work of the railways lay in the difficulties which they encountered during September in securing enough grain traffic to keep their equipment properly engaged. The harvest was two to three weeks late, and the excessive dampness of the season added to the disadvantages of the situation. The official crop year begins on September 1, and records of shipments use that date as a starting-point. The real movement did not begin until the third week of that month in 1912, and it was but well under way when October dawned. The mere statement that the shipments of all grains for September amounted to only 5,954 cars, as compared with 10,565 for the same month in the preceding year, indicates the backwardness of the season.

The estimates of production of the four principal grains for 1912, with comparative figures of 1911, give a fair idea of the magnitude of the task which the railway companies face in the West during the closing months of every year. It is not to be assumed, of course, that all the grain is shipped out, but the proportion which remains in the country is not appreciably larger from year to year, in spite of the increased settlement and the slowly developing tendency to adopt mixed farming. A big aggregate yield means a big task for the transportation companies, and the way in which they are grappling with it may be shown in the clearest way by the use of tables. Figures, prepared by the census branch of the Department of Agriculture at Ottawa, printed in detail elsewhere, indicate that the approximate wheat, oats, barley and flax production in the three provinces for 1912 is in excess of 400,000,000 bushels.

The part which each year grain plays in the autumn movement is shown most clearly by the figures of inspections. The total movement from September 1st to November 25th, with comparisons from a similar period in 1911, was as follows:—

	1912, Cars.	1911, Cars.
Wheat	53,345	48,383
Oats	7,979	5,355
Barley	4,409	2,220
Flax	4,642	1,050
Total	70,375	57,008

The movement by months was as follows:—September, 1912, 5,954 cars as compared with 10,565 in September, 1911; October, 1912, 33,779, as compared with 26,642 in October, 1911; November 1st to November 25th, 1912, 30,642, as compared with 19,801 in the same period in 1911. It will be seen that the increase in October alone was more than 7,000 cars, while in the 25 days of November it was more than 10,000. The part which each railway played in the total movement was as follows:—Canadian Pacific, 43,138 cars; Canadian Northern, 18,424; Grand Trunk Pacific, 7,497; and Great Northern (Duluth), 1,316. The quantities of each grain represented by these inspections are roughly as follows:—Wheat, 1912, 57,079,150 bushels, as compared with 51,769,810 in 1911; oats, 15,638,840 bushels, as compared with 10,495,800; barley, 5,290,800 bushels, as compared with 2,664,000; flax, 4,874,100 bushels, as compared with 1,102,500; total, 82,882,890 bushels, as compared with 66,032,110. The figures for the full season of navigation are not available at this writing, but it is fairly safe to estimate the total in 1912 at approximately 100,000,000 bushels of all grains.

At Lake Terminals.

With so large an outpouring of grain from the interior elevators and farmers' loading platforms, it was to be expected that congestion would arise at the lake terminals. The system which prevails at Fort William and Port Arthur is more efficient than at any other time in the history of the trade, but it cannot perform miracles. In addition to the remarkable rush from the prairies, the principal railway company concerned was embarrassed for a time by a strike on the part of some of its office workers, and the situation threatened to become serious. The wonder is not that the system failed to do better; rather is there cause for surprise at its having maintained even a semblance of regularity and effectiveness The blockade at Fort William was partly due also to congestion at terminals in the east, particularly Buffalo. There is room for congratulation at the results achieved throughout the shipping season. Any scheme of transportation which is able to take care of 8,050 cars of grain every week for eight consecutive weeks is in a position where it can afford to minimize the seriousness of terminal difficulties.

* * *

BIG ORDERS FOR RAILWAY EQUIPMENT

The past year was an unusually busy one for the rail mills, locomotive works and car foundries. The Canadian Pacific, Grand Trunk, Grand Trunk Pacific and Canadian Northern Railways gave orders during 1912 for 727 new locomotives and 43,164 freight cars. These orders will keep the car and foundry companies busy well into the current year. The figures, gathered by The Monetary Times, may be summarized as follows:—

Engines or cars ordered, 1912.	Canadian Pacific Railway.	Grand Trunk Railway.	Canadian Northern Railway.
Passenger	414	....	150
Freight	20,442	7,650	6,072
Miscellaneous	104	...	.
Total	30,524	7,790	6,336
Locomotives	473	140	114

It is estimated that there were at least 20,000 more cars and 400 more locomotives available last fall than in the previous year.

The Canadian railways expended last season about $4,000,000 on improvements and enlargements of terminals

REGINA

Capital and Commercial Centre of the Province of Saskatchewan.

Scarth Street Looking South — The Financial Centre

REGINA

in 1906 a town of 6229 people, in 1912 a city of 42,000.

This City presents opportunities for the conservative investment of capital that cannot be equalled anywhere. Its growth is not merely a possibility. There is proof positive that in the space of a few years it has grown from a healthy prairie town to a city of 42,000 busy and prosperous people, with magnificent public buildings, substantial business blocks and beautiful homes. It has an inexhaustible water supply, an adequate sewerage system and an extensive street railway system. It enjoys excellent credit in financial circles. So much is realized, yet Regina's future is even brighter. New people, new business houses and new industries are locating daily to cater to the ever increasing wants of Saskatchewan. The residential district must continue to extend, the old residential district must give way to the expanding business area, and realty values must increase.

Here is the investor's opportunity; buy a piece of property as close to the business centre as you can. It will increase in value very rapidly, and even within the winter season you will have made a handsome profit.

The utmost care is exercised in the selection of our investment offerings, the result of which has been that in 25 years' operations all our clients have made large profits. In the past three years their earnings have averaged over 25% per annum.

Our offerings include close in business sites on the principal traffic streets, trackage and residential property in the best districts. If you will suggest the amount you desire to invest we will make specific recommendations.

In addition to conservative real estate offerings we always have on hand a number of gilt edge first mortgage securities. These mortgages are on choice improved properties placed with from 50% to 200% security margin, and yield 7% and 8% per annum.

LINKING CANADA AND BRITAIN

British Visits to the Dominion Last Year Were Numerous—Some Old Myths Dispelled as a Consequence

BY COLONEL SIR HENRY MILL PELLATT, C.V.O.

Canada has been visited this year by more than thirty members of the British House of Commons and by nearly a score of members of the House of Lords, as well as by a much larger number of other public men who hold positions of prominence in financial, commercial, industrial and social circles in Great Britain. Many of these distinguished visitors came not for the first time; some of them through repeated visits have made themselves thoroughly familiar with this country. A very large number of them have substantial and increasing financial interests here, and they have every reason to be as keenly concerned in the prosperity and in the progress of the country as the most patriotic Canadian can be.

COLONEL SIR HENRY M. PELLATT, C.V.O.

The effects of such visits from Great Britain have been re-enforced by the effects of visits of Canadian public men to the Old Country. New personal and business relations of a friendly character have been established, and through these a stream of capital of great magnitude has been directed towards this country and to this stream there is due a large part of our present prosperity. Our industrial and agricultural resources might have been eventually developed by means of our own savings; but such a process would have been a lengthy one, and it must have involved a standard of comfort for all classes much lower than that which we now enjoy.

Capital and Closer Relations.

These new and closer relations have not merely resulted in a fructifying stream of capital which has enabled us to exploit our natural resources with great rapidity, but they have resulted in the dissipation of many illusions on both sides. On the one hand the idea that Canada is a snowy waste has practically disappeared, at all events among the influential classes, and on the other hand the idea that British capitalists and public men are indifferent about Canada has disappeared also. Every visitor becomes an advertising agent for Canada and assists in encouraging the best kind of emigration to this country, and more and more ample investments of capital in it.

Every visitor is surprised at the phenomenal growth of the Canadian cities and at the high level of comfort which practically every one enjoys. They remark naturally upon the similarity of the Canadian to the British people in respect to habits of thought and life, and upon the similarity of Canadian educational institutions and methods to those of the Old Country. With regard to hospitals, for example, a former president of the Council of the Royal College of Surgeons in Ireland told me that the hospitals in Toronto and Winnipeg, in equipment, modern conveniences and facilities in dealing with patients were superior to the best hospital in Dublin.

Can Absorb Much Labor.

Our visitors have also been impressed with the fact that Canada is not merely a good place for agricultural laborers, but that there is here also room for mechanics, and other workers in the industrial field at relatively high wages. They have also learned that there is less proportionate demand for men for clerical positions, since in most of our commercial and industrial enterprises, the promotion of youths who enter offices at an early age is practically sufficient to meet the demand.

I have been privileged to meet a great many Old Country people during the last few years, and these are some of the impressions which they received, with the result that they go away tremendously impressed with the beauty and wealth of Canada, proud of her as the chief overseas Empire, and determined to do everything in their power to promote and advance the bonds of Imperial connection and unity; in fact, there is little doubt but that this feeling will take practical form at the first change of Government, and that there will be in England some measure of tariff reform, and that Canada will receive a preference either in respect of wheat or in some other way which will be of benefit to her and to the Empire as a whole.

◆

PROSPERITY AND FAIR TREATMENT OF CAPITAL

New Countries Require Courageous Investors—Authority Takes Hopeful View of Financial Outlook

BY C. R. HOSMER.

I take a most hopeful view of the financial outlook for the coming year, although many leading authorities abroad think the pace set in Canada is altogether too rapid, and that the time is about due when the pendulum must swing in the opposite direction. These financiers pointed to the large municipal borrowings west of the great lakes, and the land boom in that section, as special reasons for sounding a note of caution. One need only visit these prosperous communities to realize that they must have money, and large sums of it, to keep up with their natural growth. The question of sewers, sidewalks and other necessary expenditures must be met. As to speculation in city and town lots, their imagination had probably been stimulated by hearing of individual transactions, where very large sums had been paid for choice corner lots in these growing towns, many of which have been purchased by chartered banks, who think they can afford to pay fancy prices when it means securing permanent locations that will attract public deposits and other profitable business.

Charles R. Hosmer.

But if one takes the country as a whole, grouping city and town lots alone [illegible] and other productive lands, the combined [illegible] my opinion, unwarrantably extravagant. One must quickly readjust one's idea of values to higher levels, in a country where the product of the soil is increasing by leaps and bounds. The value of the crops to the producers in the three western provinces last year is conservatively estimated at three hundred million dollars.

Fair Treatment of Capital.

So long as the English and foreign investors believe they will get fair treatment, their money will flow in this direction, but once let them get the impression that there is any real and widespread hostility, against for instance such an enterprise as the Canadian Pacific Railway procuring what money they required from their own shareholders on, say a 5¾ per cent. basis, then their purse strings will quickly tighten with disastrous and far reaching results.

On my visits to England many years ago, when the Grand Trunk was the leading railroad enterprise in Canada, in which English investors were largely interested, one constantly met people who had been shareholders in this enterprise, whose investments at that time gave them little or no return, and consequently one could not get them to take an interest in anything Canadian. In fact, so deep-seated was this feeling that the Canadian Pacific Railway, in its earlier days, had great difficulty in procuring capital in England, and was driven to Holland and other Continental centres, which accounts for the large proportion of Canadian Pacific securities which are still held in continental countries. It was not really until such time as foreign investors commenced to get profitable returns on this stock that the tide changed.

There are fully one hundred thousand people living abroad who are interested, directly and indirectly, in Canadian Pacific securities. One can hardly over-estimate what it means to have this great group of investors talking up Canada and its securities. It would not require much of a stretch of one's imagination to picture the disastrous results that would follow, if these people took the other path and advised against them.

Returns of a Dozen Investments.

If the average investor grouped together, say a dozen of his various investments, he would find that the average on the whole would not be more than he would receive from a mortgage on property in a settled country where there would be no element of risk. Many of ones investments are dead failures. It is therefore reasonable to select the one good one, and demand that its increased value should be shared with the community at large, and ignore those which have proved to be valueless.

It goes without saying that a new country requires courageous investors, and if they should occasionally strike a more than ordinarily good thing, they should be congratulated and encouraged, which would lead, as one knows by experience, to the making of further ventures and the taking of further risks, with the inevitable result that in the final outcome one gets little more than a fair average on the money risked and invested. The history of France bears out the fact that the accumulation of wealth comes more largely from savings than from fortunate investments.

◆

RECIPROCITY IN SECURITY DEALINGS

Much Wider Market Should Exist in the United States for Canadian Securities—Comparison of the Two Countries

BY HENRY CLEWS.

There is no sound reason why there should not be a much wider market for Canadian securities in the United States than there is; for there are none better, and both countries have much in common and very clear ideas of each other's opportunities and methods. Already there is a very considerable amount of American capital invested in Canadian enterprises, more than is generally appreciated on either side of the border. But so far such investments have been confined to a few wealthy Americans or to our big industrials, so that the average American investor has had little interest in the wonderful development of Canada, particularly in comparison with the vast influx of British capital during the last few years.

Why Not American Dollars?

While it is perfectly natural that Canada should turn first to the mother country for financial aid, that is no reason why American capital, American enterprise, and American experience should not be as profitable to Canada as to ourselves. Thousands of Americans are moving into Canada annually to better themselves, and incidentally to better Canada. If American men are welcome, why not American dollars? For Canadian investments have much to recommend them to conservative buyers on this side of the border. Your politics, the bane of American investors; are more stable than ours. You are fortunate in having less foolish and unreasonable hostility to capital. Your attitude to corporations is more friendly, and you have prevented many of the ills that pester financial movements here by better legislation.

You have an almost ideal banking system, many features of which might with advantage be incorporated into our own, since conditions in the two countries are in many respects identical. You are one of our best customers, and we should have bought much more freely of you had reciprocity succeeded. Its defeat, in my judgment, was a setback to both countries. If trade had been permitted to flow as freely north and south, as it does east and west, the development of Canada would have far outrun its present stage. You would then have kept pace industrially more nearly with the United States. We do not want political union with Canada; and there is no such desire to annex Canada, as Canadians too easily suspect. Sober second thought here is unmistakably against annexation. But commercial interchange is another matter, and the greater freedom thus obtained the greater the good to both countries.

Welding People of Conflicting Ideals.

Finally, you have a less excitable and more homogeneous population to deal with, and a greater respect for law than we. These are vast advantages in your favor. We are still furiously engaged in welding together people of conflicting ideals and traditions from all parts of the earth, and the end of this task is not yet in sight: again, therefore, let me repeat there are sound reasons for the extension of American investments in Canada. At the moment you seem to be approaching a reaction from the extraordinary boom that you have enjoyed. But this will only be temporary. Canada has a magnificent future before her, a future closely resembling that of the United States, although our development in the the natural order of things has come before yours. American investments in Canada should be encouraged. They will profit both sides, and will do more than anything else to promote friendly and profitable relations between the two nations which rule this continent.

HENRY CLEWS.

◆

TRADE UNIONS IN CANADA

Canada has 1,741 trade unions, of which 1,531 are international. Here are the Canadian figures compared with those of other countries:—

Country.	Total members.	Per cent. of members to population
German Empire	2,688,144	4.1
United States	2,625,000	3.0
United Kingdom	2,426,592	5.4
France	977,350	2.5
Austria	400,505	1.4
Italy	167,256	0.5
Sweden	148,649	2.7
Netherlands	143,850	2.4
Belgium	138,028	1.8
Canada	133,132	2.0
Denmark	131,563	4.0
Switzerland	110,740	3.1
Hungary	85,266	0.4

Three countries of the thirteen noted have a smaller trades unions membership than Canada. The greatest percentage of members to population is 5.4 in the United Kingdom and the smallest 0.4 in Hungary. In this respect Canada is ninth in the list.

WESTERN PROSPERITY AND AGRICULTURE

What the Crops Mean to the People—Many Factories Were Established on the Prairies Last Year

BY JOHN COGGSWELL.

In round figures, the grain crop of the prairie provinces is worth $260,000,000. That is nearly $200 for every man, woman and child in the district. The wheat would make flour to feed, for one year, the entire population of England, Ireland and Scotland and take care of the Dominion besides. From the proceeds of the oats crop, one could hand every person in the Dominion a ten dollar bill. The barley and flax crop would fill 49,000 large-sized box cars. To move this entire grain crop requires 473,000 cars, equal to a train reaching from Montreal to Vancouver, and enough cars left over to make another smaller train reaching from Winnipeg to Calgary. These cars would be equivalent to 11,825 regular sized trains, and if they passed through your town, one behind the other, at thirty miles an hour, one would have to stand on the station platform six days and six nights to see them through.

In connection with the unprecedented prosperity through which the Canadian West passed during 1912, we must consider the foundations of its present development—agriculture, trade and industry. During 1912 more agricultural land was settled and brought under cultivation than during any preceding year. Trade, as reflected in clearing house returns, was greater than ever before. The past year saw more factories located in the Canadian West than any former corresponding period. Further, the 20,000,000 acres of land under crop in Manitoba, Saskatchewan and Alberta in 1912 represents but 7 per cent. of the easily arable land surface of these three provinces. Eventually all this land will be producing, and a wonderful increase in trade for the prairie cities will follow this settlement. One thing, cheap power, if nothing else, will bring factories to utilize Western Canada's wonderful array of natural resources and supply this trade.

The highest priced business lots in many of the larger prairie cities sold last year at a small advance over 1911 in spite of the fact that development was much more rapid. Will this not continue—Western development rapid, real estate advancements slower, until an adjustment is brought about without any crisis?

Agriculture is The Foundation.

Agriculture is Western Canada's main foundation of prosperity. The past season has been one continual round of triumphs for the agriculturists of the prairies. The grain crop of 1911 was then the largest, by millions of bushels, of any in the history of the country. Last year's exceeded it by approximately 35,000,000 bushels and graded nearly 40 per cent. higher.

Number 1 Hard has of late years been a rather scarce commodity. This fall twenty cars of wheat were shipped from one country point in Alberta, and the inspectors at Winnipeg graded nineteen of them No. 1 Hard—the best grain in the world. Twenty-seven out of twenty-nine cars shipped from a Saskatchewan elevator took the highest grade and the two remaining went No. 1 Northern. In short, the 1912 was a quality as well as a quantity crop.

While grain successes on the market are worth more than those in the show hall, the latter are extremely efficient in advertising abroad the greatness of an agricultural district. At the International Dry Farming Congress, in October, in contests involving practically every Western State and Province, Western Canada won every hard wheat prize, every oats prize, every flax prize, all but one of the barley prizes, a large majority of the vegetable awards, and British Columbia got more than her share of the fruit premiums. The judges at this year's New York Land Show awarded a silver cup to the Canadian Pacific Railway exhibit, declaring it the "finest collection of grains ever gotten together in America. British Columbia fruit has brought honor to the Canadian West at Portland, Spokane and Chicago.

Safe and Sane Agriculture.

But, meaning more to the agricultural West than all these honors, are the honors she has gained for the cause of safe and sane agriculture—for mixed farming. During 1912 larger acreages of alfalfa, timothy, feed barley and every other forage crop were harvested than ever before. The Canadian West is enjoying a period of transition. Time was, and a few years ago, when the Westerner sold his cows as beef and procured his milk from tin cans. Then came the grain farmer, and even the beef herds showed a great decrease. Now figures are mounting. Last year's statistics show that there were 37.3 per cent. more horses on farms in Western Canada than in 1908; dairy cattle increased 11.2 per cent.; beef cattle, 7 per cent.; sheep, 5.7 per cent.; swine, 3.2 per cent. There will be no backward steps in this movement toward the new agriculture. Provincial and Dominion departments of agriculture, the railways and those farmers who have themselves practised diversified agriculture and found it good, have combined in preaching mixed farming.

Industrial Developments of the West.

The Western Provinces are combining husbandry and manufacture—a new level which assures large and prosperous cities. Western Canadian cities have ceased to seek industries in a haphazard method. Each city has put forward special efforts to get flour and oatmeal mills. The result is that six new mills with a combined capacity of over ten thousand barrels per day will soon be in operation. Western Canada has deposits of merchantable clays of exceptional quality and extent. More than thirty brick plants, varying in capacity from 2,000 to 80,000 per day, were established last year. In addition, are a number of pottery and glass works.

Statistics are not yet available as to the increase in industrial output, but the following instances give some idea of the acquirement of manufactories in 1912:

Fort William has been chosen as a location for new industries that will erect factories valued at nearly $3,000,000 and employ over 600 hands. The products include carwheels, starch, clay products, bedding, wire fencing, grain stookers, etc. One hundred and six charters to purely industrial companies in Winnipeg were issued since the first of the year. These have a combined capital of $14,500,000. Calgary secured the car shops of the Canadian Pacific Railway, a million bushel malting plant, a plant for the manufacture of traction engines, three clay products factories and many smaller industries.

Firms from England and the United States.

New industries in Edmonton include a sandstone brick plant, a malting and brewing plant, shoe factory, two additional brick factories, a cement plant, and a machinery factory. Among the important plants placed in operation in Vancouver and Victoria are several large saw-mills, a paper factory, a half-million dollar pottery plant, a flour-mill and factories in connection with the fishing industry.

Western Canada's trade also has grown during 1912 Many large firms from England, the United States and Eastern Canada established branches in the Prairie Provinces and British Columbia. At least fifty of them have built warehouses ranging in price from $30,000 to $300,000.

Briefly, the past was the greatest year agriculturally, industrially and commercially that Western Canada has yet experienced. Not one-tenth of the arable land of the West is as yet under cultivation. Its great water-powers, deposits of coal and natural gas, timber, clays and sands and other natural resources have hardly been touched. Its railways are daily opening to settlement new territory and hundreds of land-hungry immigrants come streaming over the borders. Western Canada's prosperity will continue.

◆

HEN THAT LAID THE GOLDEN EGGS

A farmer who lives near Colquitz, Vancouver Island, gives the following results from 150 hens:—

Receipts.		
From sale of eggs	$375 00	
From sale of chicks	50 00	
From increase of flock	25 00	
		$450 00
Expenses.		
100 bushels wheat at $1.05 per bushel	$105 00	
50 bushels barley at 60 cents per bushel	30 00	
Sundries	10 00	
		$145 00
Net profit		$305 00

This shows a net profit of $2 for each hen, not including labor.

MONETARY CONDITIONS IN BRITISH COLUMBIA

Confidence Shown by Eastern Investors—Transportation, Mines, Farms and Fisheries Employ Much Capital and Labor

BY EWING BUCHAN.

In answer to the question, "who is buying Vancouver property at high prices?" a financial man of that city pointed out two corners, one of which was purchased by a large retail and manufacturing house of Montreal, and the other purchased by a bank with its head office in Montreal, both purchases being at figures which surprised even the optimistic inhabitants of the terminal city, and he cited other instances proving that it was not the citizens of Vancouver but that the values were being demonstrated by eastern investors and such purchases of property by large eastern corporations, constitute to the people of the west evidence of confidence in the growth and prosperity of the cities in the western province, and of the soundness of monetary conditions.

It is not to be argued from this, that capitalists in Vancouver, Victoria, New Westminster, Prince Rupert, and other coast cities are not making use of their opportunities; on the contrary, it would be difficult to find in many cities of larger population, building, etc., equal to those which have been erected during the past five years, and which are now being erected in coast cities.

Some Reasons for Confidence.

It may naturally be asked, what are the principal reasons for this manifestation of confidence in the west? and the eastern manufacturer or banker could perhaps readily reply, and would be glad to have the opportunity of so doing, but in the opinion of the writer, the principal reasons are:—(1) A climate consisting of only two seasons, "When it is fine" and "When it rains." A climate, without extremes of heat or cold, a climate in which snow is rare, a climate where seaports are open all the year round, and navigation is seldom interrupted. And it is the same away to the north, where Prince Rupert possesses the similar advantages, though the rain-fall during the winter may perhaps be a little more there than in Vancouver, and a little more in Vancouver than in Victoria.

Development of Mineral Resources.

(2) With large coal areas being worked in the south-east of the province, on Vancouver Island, in the extreme West, in the Nicola Valley in the interior; with gold, silver and copper mines being operated throughout the province, besides all the lead and other metals. Over $23,000,000 is being produced annually through this industry in British Columbia, or over $58 per capita of the population, as against $17 per capita in Ontario. The enormous expense entailed in opening up and operating these resources, the development of which is only in its infancy, through purchase of machinery and supplies puts a vast amount of money into circulation, and employs a great number of laborers, whose clothing and food contributes largely to the increasing trade of the province.

(3) From a sentimental standpoint, it is almost a cruel act to take one of those gigantic Douglas fir or red cedar trees, with a diameter at the ground of thirteen, fourteen, or even fifteen feet, which has stood for centuries, and cut it up into timber, lumber, shingles, and the other requirements of commerce. This industry employs an enormous amount of capital and labor. With the necessary outlay and the employment of labor and provision for the domestic requirements of the thousands thus employed, the wholesale and retail trades of the province, and the transportation companies, perhaps thus receive the greatest part of their business from the produce of the forest. The total lumber cut for 1911 was estimated at 1,060,000,000 feet. At the present time this industry is in a thriving condition.

Fishing and Farming.

(4) The fisheries of British Columbia produced $11,000,000 in 1911 as compared with $8,000,000 in 1910. Here again the expenditure for capital and wages especially in the canning industry is great, and a good season's fishing adds much wealth to the province.

(5) Under the head of agriculture can also come fruit culture, dairy and poultry farming, and it can safely be stated that British Columbia offers many opportunities over the older provinces for these pursuits. The estimated returns for the year 1911 showed the value of products $20,838,000, an increase of $6,000,000 over the previous year, and yet the province has to import well on to $15,000,000 of produce annually to feed the people.

The government is constantly being urged to offer more encouragement to agriculturists, and to impose settlement duties on holders of land for speculation, but the fact remains that the province has to import large quantities of farm products and fruit. British Columbia wants agriculturists, producers, and nature never offered greater opportunities in the way of soil and climate. A ready market is available in any of the large cities.

Manufactures, Railways, etc.

(6) Everyone knows that British Columbia is in its infancy in manufacturing apart from timber and its many products, including pulp, but still the estimates show $5,000,000 as the output in the year 1911. The province contains unbounded natural resources, but transportation facilities and the labor problem have presented difficulties that do not obtain to the same extent in older provinces, yet progress is being made and new industries are being established.

(7) A great feature in the monetary situation, especially in the circulation of money, by employment of labor, and purchase of material and supplies, is the constant and increasing expenditure by the leading railways.

The pioneer road, the Canadian Pacific Railway, is double-tracking the whole line from Vancouver to Calgary, and has almost completed the work to Mission, forty miles inland, besides laying out the large terminal yard with roundhouses, shops, etc., at Coquitlam, with the new station now being erected at Vancouver, many millions of dollars are being spent, apart from the constant expenditure for maintenance.

The Canadian Northern Railway in the work of completing its continental line into Vancouver by way of Port Mann, is spending even more money.

Work on American and other Railroads.

The Great Northern and other American roads are constantly doing construction work though not to the same extent.

Both the Great Northern and the Kettle Valley Railway are working to complete a road from coast to Kootenay through the Hope Mountains, which involves large expenditure, and this is one of the most important links in the Province.

The Pacific and Great Eastern Railway having acquired the Howe Sound and Northern Railway, is just commencing the large expenditure necessary to connect Vancouver with the Peace River district and the rich valleys intervening.

The British Columbia Electric Railway Company spent over $1,000,000 last year in rolling stock alone besides the constant construction of new lines which would run to greater figures, and the Western Canada Power Company is preparing to construct a tram line along the north side of the Fraser River. The vast expenditure thus mentioned besides the many other transportation companies operating and constructing, create perhaps the greatest factor in the steady upbuilding of the monetary situation at the coast.

British Columbia, however, wants agriculturists as mentioned before, and manufactures, so that when railway construction slackens, there may be something tangible to rely upon as the backbone of prosperity, and to make use of the advantages that will come through new channels of trade made by the opening of the Panama Canal.

◆

SHEEP RAISING IN CANADA

The position that Canada occupies in comparison with the chief sheep-raising countries is indicated by the following statement:—

	Area. square miles.	Number. of sheep.
Australia	2,945,000	105,615,000
Argentina	1,135,000	67,211,000
United States	3,567,000	51,216,000
United Kingdom	110,000	31,852,000
New Zealand	104,000	28,480,000
Uruguay	72,000	26,127,000
Chile	294,000	4,224,000
Mexico	767,000	3,424,000
Canada	3,729,000	2,598,000

About half the sheep in Canada are in Ontario, but even in that progressive agricultural province the flocks are dwindling, while Australian and New Zealand frozen mutton is used on Canadian tables.

◆

The winner of the championship prize at the International Dry Farming Congress, at Lethbridge, Alberta, last year, for the best wheat grown under dry farming conditions, was Mr. H. Holmes, of Raymond, Alberta. The prize awarded was a $2,500 farm engine. Four of the judges were from the United States and four from Canada. Out of 46 prize winners in wheat, barley and oats, 40 were Canadian farmers. Mr. Holmes' prize wheat was of the same variety which won the world's prize at New York, and is known as Marquis wheat. It yielded 81 bushels to the acre.

WHAT IS CANADA WORTH?

Wealth of the Country, Actually and Potentially—A Glimpse of its Resources for Those Who Want to Know More of the Dominion

BY FRANK YEIGH.

Do you know Canada?

Do you know how rich she is, actually and potentially?

Do you realize her assets in resources?

Here is a towering tree; a nugget of ore; a bushel of golden wheat; a net full of fish; a turbine turned by rushing water—have you measured what each represents?

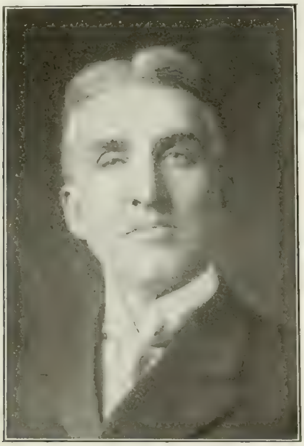
Do you know the Canada of to-day, and the prospective one of to-morrow?

Do you know Canada?

Canada is beginning to talk in billions, and remember a billion is a thousand millions. Cyphers count when added to the mere million mark. Field crops and live stock values combined make a billion with a margin over; bank deposits are well over the line; foreign trade is rapidly nearing it; the value of manufactured products, as well as the capital invested therein, have each reached the billion mark.

Some of the Million Computations.

As for the million computations, there are not a few: Railway earnings, 1911, of $188,000,000; forests, mines and fisheries productions exceed $200,000,000, with exports of $100,000,000; the Federal government budget for 1912-13 represents $150,000,000; the savings of the people total $100 per capita, or over $700,000,000; while the dairy industry represents a value exceeding $100,000,000.



FRANK YEIGH.

But what of our actual resources, developed and undeveloped?

As to Agriculture.

Let us take the soil first, for first it is in the prosperity and existence of a nation.

Take wheat: Canada rose, in 1911, from seventh to fifth place in world's wheat production, with a yield of 215,851,300 bushels. 90 per cent. thereof was grown in the Canadian West, viz., 194,083,000 bushels. The total wheat values reached $138,567,000—nearly equalling the Dominion government budget. Nearly 50,000,000 bushels were exported, practically all to the United Kingdom, and yet wheat growing is only in its infancy in the prairie country. Less than ten per cent. of the available area is under cultivation. The storage capacity of the 2,000 elevators and warehouses of 105,000,000 bushels, is less than fifty per cent. of the present production. Or, take field crops as a whole. The 1911 values totalled $565,711,600. Oats led as to production, with 348,187,600 bushels of the total of 820,550,300 bushels.

Canada's field crop area has more than doubled in ten years, and is steadily increasing. Even with over half a million farmers, tilling 32,000,000 acres, Canada's great farm of many millions is only in the A B C of its tillage and yield.

Do you know that Canada grew, in 1911, $219,129,000 worth of root and fodder crops; that the agricultural and animal product exports reached $143,112,950, including $49,536,308 of grain, and $13,854,790 of flour?

Canada has sufficient flour mill capacity to supply five times its population.

Live stock values are steadily increasing, with $593,768,000 as the latest record mark, representing 14,534,500 animals.

Canada's dairy industry yields over $100,000,000, 23 per cent. being exported. 3,672 cheese and creamery factories are in operation.

It is estimated that Canada has 370,000,000 acres of land available for cultivation. Only 32,000,000, or less than ten per cent., produced the $565,711,600 values of 1911. With a normal annual increase in area tilled, the figures will soon double and treble.

Canada is only beginning to till its big farm.

Regarding the Forests of Canada.

Canada's wealth in her forests is incomputable, yielding in 1910 $96,021,904, with forest products exports of $45,000,000. Timber dues form the chief source of revenue of several provinces.

"Canada's average annual output of sawn stuff alone is more than four billion feet, board measure. Add at least ten million cords of fire-wood, a million cords of pulp-wood, fourteen million railroad ties, about seventeen million cubic feet of piling and construction timber for culverts, trestles, bridges, etc.; besides telegraph and telephone poles, fencing material, mine props,

"Expressed in board foot units, the total annual consumption of wood for various purposes is estimated at sixteen billion feet," and yet a Government forestry expert asserts that lumber enough to build whole cities, ties enough to supply complete railway systems, and enough fuel-wood for the entire population of Canada are annually swept out of existence by the fire fiend without exciting the slightest public interest. During the nineteenth century **more** than half of our forests have been swept away by fire—uselessly and needlessly.

Canada's pulp forests are assuming a value only recently realized. 60 pulp mills are in operation. No less than 1,520,227 cords of pulpwood were cut in 1911, valued at $9,678,616, Quebec leading.

26 native species of wood entered into the Canadian annual timber cut.

Notes of Mining Enterprise.

The fact that Canada possesses all the valuable minerals stamps her as a great mining country. The production for 1911 reached $102,000,000, with a grand total since 1886 of half a billion dollars.

Large as these figures are, it is nevertheless felt that Canada is in the kindergarten stage of mining development in view of the vast areas awaiting exploration and development. But a small percentage of British Columbia's mining area has been explored. The great Peace River country gives evidence of wonderful richness in ore, coal, oil, natural gas and asphaltum, and other parts of the Dominion will, no doubt, be found to be richly mineralized.

Canada leads the world in nickel, asbestos and corundum, and yields one-eighth of the world's silver production.

The Cobalt mines have yielded over $50,000,000 in silver since their discovery in 1904; and the nickel mines nearly $100,000,000 worth of nickel.

Canada also ranks eighth among the world's pig iron producing lands.

Canada's coal and lignite areas are estimated to contain 172,059 million tons. The coal production for 1910 reached $29,870,750, the highest on record.

Canada has an investment of $100,000,000 in her iron and steel works.

Wealth of the Fisheries.

Canada's fishing grounds constitute not only the most extensive but the most abundantly stocked commercial fishing waters in the world. The year 1911 was her greatest fishing year in products and profits, reaching closely to $30,000,000, Nova Scotia leading, with British Columbia second.

The fishing exports in 1910-11 were $15,675,544.

The total fisheries production value, from 1870 to 1910, totalled 760 millions. $20,000,000 is invested in fishery equipment, employing 100,000 men.

The whaling industry has also developed rapidly in recent years, 700 whales having been caught on the Pacific coast alone in 1911, and a large number in Atlantic waters.

Strength of the Water Powers.

The water power resources of Canada have only assumed their realizable value in recent years, over against the harnessing and transmission of electrical energy and its wider adaptation to human needs.

The Canadian Commission of Conservation estimated that 1,016,521 horse power has been developed from water power. To develop an equal amount of energy in a modern steam-electric plant would require the burning of 7½ tons coal per horse power per annum.

FARM MORTGAGE INVESTMENTS IN ALBERTA

For Private Investors, Trustees, Endowed Institutions, Banks, and Insurance Companies, Negotiated and Protected by

ASSOCIATED MORTGAGE INVESTORS

(Incorporated)

Under the management of men who have been continuously successful since 1873 in lending their own funds and those of clients on mortgages secured by improved farms. The Company's plan of business is thus the tested result of

Thirty-eight Years of Successful Investing Service

This corporation negotiates with its own funds, and offers to investors First Mortgages on improved farms in the Province of Alberta, Western Canada

An Investment in these Mortgages is Protected by

1. **Physical Security** of improved farm land worth not less than *three times* the amount loaned in every case.
2. **A Guarantee by Government** under the Torrens System of Land Registration that the *Title is Indefeasible* in the Borrower and the *Mortgage a First Lien.*
3. **The Agreement** of this Corporation to

(a) Pay all interest on the due date in its own cheque, making all collections in behalf of the lender, and assuming any loss by delinquencies.

(b) Pay, or cause the borrower to pay, all taxes, rates, liens, assessments and premiums for collateral insurance.

(c) Collect, or pay the cost of enforcing collection, of all Principal at maturity, supplying a re-investment of the proceeds on request.

This Corporation compensates itself for this service by appropriating the difference between the current rate of interest in Alberta and the rate to the investor, so that

These Mortgages net 6% interest, payable semi-annually, over a uniform term of five years, in par funds in Toronto, Montreal, London, Paris and New York.

Denominations, $500.00 to $10,000,00

included in a stock of completed mortgages always on hand approximating $200,000.00 subject to increase on demand.

Canadian and foreign mortgage, insurance and trust companies increased their investments in Alberta mortgages from $24,711,594 at the end of 1910, to $33,518,667 at the end of 1911. The published records of these companies show that few have greater outstanding investments in Alberta Farm Mortgages than the Associated Mortgage Investors.

Franchises have been granted for the development of 450,000 of Canada's share of 1,125,000 horse power at Niagara Falls.

Ontario's Hydro-Electric Power Commission has built the longest transmission line in the world, viz., 376 miles, with over 100 miles of tributary lines.

Other Signs of National Wealth.

In addition to the four great natural resources above mentioned, there are many auxiliary evidences of Canada's prosperity and wealth.

Industrially, in the last decade the number of industrial establishments has increased from 14,650 to 19,209, an increase of 31 per cent.; the capital from $446,916,487 to $1,245,745,496, an increase of 178 per cent.; the production from $481,053,375 to $1,164,775,532, an increase of 142 per cent., and an increase of employees from 339,173 to 514,287, or 51 per cent.

The railway development is shown in the present mileage of $25,400, with 7,000 miles under construction. Canada stands third in the list of railway mileage increase in the last 50 years, and has a greater mileage per capita than any other country. The mileage has doubled in 20 years. The electric railway mileage is over the 1,000 mile mark.

No other country has done as much for transportation as Canada, including the 72 miles of canals, the St. Lawrence ship canal, harbor improvements, etc.

The growth of the postal service is another index of expansion. The 3,638 offices in 1867 have increased to 13,324, and the 18,000,000 letters carried to 504.000,000. 850 rural mail delivery routes are now in use.

Some More Statistics.

There are 335,000 telephones in Canada. The first in use dates only from 1877.

The life insurance in force of $950,000,000, and fire insurance of $2,277,000,000 tell their own story.

The building operations in 30 Canadian cities in 1911, of $128,765,991, showed an increase of 32.36 per cent. over 1910.

Such are a few evidences of national wealth, in statistics, of the Canada of to-day, with their own inferential application to the Canada of to-morrow. And who is equal to a prophecy, in figures or fancy, of the country yet to be?

To quote Rev. W. J. Herridge, of Ottawa, in conclusion: "The eyes of the world are upon us to-day. The esteem of others can be gained only by a proper esteem on our part for our magnificent inheritance, rich not alone in tangible resources, but richer still in its splendid traditions of courage and justice and liberty. Our past calls for a future, not wrought by the blind evolution of chance, but by the united effort of all loyal Canadians. If, in spite of mistakes and failures, we aspire to keep a true sense of relative values, to pursue the noblest ideals of national life, to refuse the temptations of material greed and mental apathy and moral feebleness, and to show our patriotism most of all by an exalted faith and an unsullied character, who shall venture as he looks out upon the night, to forecast the glory of the dawning to-morrow?"

◆

PIPE AND BOTTLE

Spirits aggregating 4,784,396 proof gallons were produced in Canada during the past fiscal year, and 40,718,647 gallons of malt liquor. During the year Canadian whisky was exported to the amount of 298,769 gallons as compared with 278,963 gallons for the previous year From the distilling and brewing business Canada reaps a revenue of $10,470,969, tobacco and cigars produce an excise revenue of $8,848,616, while the total government revenue from the tobacco and liquor business amounts to $19,635,863, an increase of $2,393,000 over the previous high record.

In the manufacture of tobacco there were 21,879,866 lbs. of raw leaf tobacco used last year, an increase of 2,000,000 lbs. over the previous year. From this raw tobacco there were produced 20,671,131 lbs. of manufactured tobacco, 781,584,865 cigarettes, and 534,068 lbs. of snuff. Compared with the previous year this is an increase of 196,000,000 cigarettes. The number of cigars manufactured in Canada in the fiscal year was 248,906,934, an increase of 21,500,000 over the production of 1911.

The production and consumption of cigars and tobacco therefore is increasing, while the reduction in the amount of spirits is small.

According to the last census of manufacturing the output of tobacco, cigars, cigarettes, and snuffs amounted to $25,300,000, salaries and wages amounted to $4,250,000, and the number of employees to 9,400, while the capital employed amounted to $21,500,000 and the number of establishments engaged in the manufacture of tobacco in its various forms reached 173. In the liquor business there is a total yearly output of about $26,000,000, while there are 132 establishments engaged in the manufacture of liquors and malt goods.

INVESTOR'S SERVICE TO COMMUNITY

Capital Should be Used Productively—Farm Mortgages as an Example—Manufacturing Enterprises

BY KINGMAN NOTT ROBINS.

The line of thought in the following paragraphs may appear academic—not "practical" in a business sense—but, on the other hand, we believe it is strictly practical, and that failure to recognize the principle stated is responsible for many financial disasters, as well as for so much of the agitation between capital and labor. Recognition of the principle by investors, on the other hand, may guide them to safe as well as economically justifiable investments.

There is an all too prevalent feeling that the investment of capital has nothing but selfish ends to serve, and that the sole test of success in an investment is the financial return to the investor. The "man on the street" will usually scoff at the idea that in investing his funds he should look beyond profit to himself.

Yet, on second thought, he would see clearly that if an investment, in making a return to himself, merely subtracts the same amount or more from others in the community, and does not create additional wealth in the economic sense, it is lost motion, and that if all capital were thus employed the machinery of civilization would come to a standstill.

Only Justification of Most Criticisms.

The short-sighted uses of capital constitute the only justification of most criticisms of our present economic system, wherein capital and labor are commonly set over, one against the other, in the public mind. In a broad sense, every man is a capitalist, inasmuch as he controls to a greater or less extent, means of production, whether money, or machinery, or brains, or physical strength. He is to be criticized when he fails to use these means so that they produce more than is expended in the process of production. The Biblical parable of the talents is an excellent illustration of true and false uses of capital. Looking upon every man as a capitalist in this sense, the futility of current criticisms of capital is obvious. The criticism cannot intelligently be directed against a class; it can be directed only against any individual who fails to use the capital in his control productively.

KINGMAN NOTT ROBINS.

Referring to money as one form of capital, the business man, banker, financier, investor, who, having control or direction of money, so directs it as to make the most productive use of it possible, is a public benefactor as truly as any philanthropist. In fact, we would be inclined to acclaim him as of more benefit to the race than the philanthropist, for his gift to the race is self-perpetuating.

Loans to Farmers.

To illustrate our meaning, we shall take as an example the form of investment with which we are most familiar: loans to producing farmers secured by first mortgages on their farms.

Since the fundamental needs of the race—food and clothing—are the product of the farmer's operations, one of the primary claims on capital is to supply him with the means of production—land, buildings, implements, live stock, etc. It is no less essential that those who direct the

supply of capital to the farmers of the country shall **see** to it that it gets into the hands only of those farmers **who** can make productive use of it.

Assuming average ability, those farmers will make the most productive use of capital who operate in the sections where the cost of production is least in proportion to the value of the crops produced. Generally speaking, since land is the chief element in the cost of producing the staples of food and clothing, the most productive farming is where fertile land is cheapest.

Low Cost of Land.

If a farmer can produce as much or more value in crops or live stock on an acre of Alberta land costing $20 to $25 an acre as he can on land in older communities costing $100 or $150 an acre, no advantage of the latter in respect to markets or prices of equipment—temporary at most—can offset the great fundamental advantage possessed by Alberta farmers in the low cost of their land.

The investment of capital to finance Alberta farmers is, therefore, a distinct public benefit. It is, moreover, obviously safe to invest capital where the use of it yields so high a return, and where the lender is secured by a first lien on the land. The borrower does not look upon the interest he pays for the use of capital as a burden, but rather as an opportunity to hire capital for a fraction of what it yields him.

Analysis of Security.

An analysis of the security for an actual investment of $100,000 in mortgages placed by my company on Alberta farms demonstrates this point. The properties under mortgage were appraised as follows:—

Land, worth	$286,290 00
Buildings, worth	27,450 00
Total value	$313,740 00
Insurance on buildings, assigned as collateral security	$ 17,350 00

The investor is certainly secured, because the land, apart from improvements that might depreciate—that is, the absolutely non-depreciable security—is worth nearly three times the investment. Moreover, this valuation was on a basis of present selling prices, in which there is an annual increase of 10 per cent. to 50 per cent., which should continue until the prices are commensurate with a fair capitalization of what the lands will produce.

Position of Agriculturist.

The farmer is in a position to profit, because the total acreage of the security is 11,081 acres, of which the tillable acreage is 10,463 acres.

Ninety-four per cent. of the total acreage is tillable. Where else can the farmer get so large a supply of tillable land in proportion to his total land investment?

Of the tillable acreage, 4,999 acres are in cultivation—about 48 per cent. It is recognized good farming practice for about one-half the farm to be left in pasture.

The total investment above analyzed is at the rate of $9.02 per acre, on which the annual interest at 6 per cent. is 54 cents. Inasmuch as it is commonly calculated that grain-growing—the simplest kind of farming and the least profitable in the yield per acre—will yield an average **net return** per annum of $5 to $15, depending on the season and the skill of the farmer, it appears that the net revenue applicable to the payment of interest is ten to thirty times the interest charge. Where else in farming or in what other staple industry can borrowed capital be more amply secured or reward the borrower so richly?

In like manner the promoter of productive enterprises in manufacturing, transportation, merchandising, etc., is adding to the world's store of wealth, and thus to the material well-being of the community, while at the same time he reaps a financial reward for his wisdom and effort. The surest defence against socialistic and anarchistic attack would seem to be far-sighted and wise action under our present system, against which no reasonable or permanent criticism can be directed.

*On October 21, 1909 this Company took over the Right of Way Mining Company, Ltd., together with a controlling interest in Cobalt Merger, Limited, paying therefor 1,685,500 shares in the new Company. Shareholders received 3 shares in the new Company for each 1 they held in the old. For the quarter ending December, 31, 1909, the new Company paid a dividend of 2%- $33,710. During 1910 the Company paid three quarterly dividends of 2%. Every quarterly dividend amounted to $33,710, making a total for the year of $101,130. The Drummond and O'Brien Companies are practically close corporations; the dividend figures have not been made public. It will be seen that the total amount paid in dividends by Cobalt companies for the four years, 1909 to 1912 inclusive, was $28,684,496. These figures are official and have been supplied to *The Monetary Times* by the individual companies. † Of this 231,143 shares are held by trustees for the benefit of the Company and do not bear dividends.

The total dividends paid from 1905 to date amount to $36,703,792.

INVESTMENT AGENTS

Revenue-Producing Properties **Lands** **Mortgages**

LAND INVESTMENTS

We act as agents for the investment of funds in Calgary properties, making purchases to the best of our ability and experience. We advise you when we consider it best to sell, and attend to your interests in every way. Our commission is derived from the sale of your property, the selling price being subject to the usual charge of 5 per cent. Cheques and remittances will be promptly acknowledged and Government Duplicate Certificate of Title forwarded at the earliest date possible from the Head Office in Calgary.

IF YOU WILL FORWARD US THE SUM OF £150 OR £200 TO-DAY FOR INVESTMENT, RESULTS WILL JUSTIFY FURTHER BUSINESS.

MORTGAGE LOANS

The placing of capital in Western Canada, and Calgary in particular, upon mortgages, means doubling an income. The standard rate of interest on first mortgage on improved property is eight per cent.

Mortgage loans are made on business blocks, residences and farm lands, fifty per cent. of a conservative valuation is usually advanced, and the security is absolutely good. Interests are payable half-yearly and can be paid through our London Office. Our charge for making this class of investment is one per cent. and the interest remitted is subject to a collection fee of five per cent. £10,000 invested in this manner would produce a net return of £760 per annum; any amount can be placed from £100 up. We invite your full investigation into this profitable form of investment, all particulars will be supplied from our London Office on application.

WHEN THE PANAMA CANAL OPENS

Canada's Pacific Coast Will Receive Great Impetus—New Route Will Save Considerable Distances—Western Wheat Shipments.

Ten months hence, if the anticipation of the engineers n charge are realized, the Panama Canal will have become a new commercial and economic factor. The official open-ng is timed for January 1, 1915. The halving of the American continent by this waterway creates a short cut for the world's shipping. The benefits which ultimately will be en-oyed by the United States as a result must naturally be shared by Canada. Both the Republic and the Dominion are situated on the North American continent, their coasts have similar relations and many of their commercial problems bear a resemblance. As to how Canada will benefit, has al-eady been discussed in a series of articles during the past ear in The Monetary Times. The question of preferential olls for the United States has placed the waterway in a ontentious atmosphere, but we are likely to find that United States politics are largely responsible. Business men of the Republic undoubtedly recognize the justice of equal tolls and hat to encourage the world's shipping to utilize the Panama Canal is the best business policy of the owners.

Distances that will be Saved.

Great savings in distances will be effected for those hips using the new route. This fact is shown in the fol-owing table, which was specially prepared for The Mone-ary Times by the naval hydrographic office of the United States Government:—

The above distances are all given in nautical miles.

The distance saved in sailing from Montreal, New York and Liverpool. via the Panama Canal, to ports northward of Panama will be approximately the same, and to ports northward of San Francisco the distances saved will be identical.

Must Improve Western Ports.

The Western shipment of wheat from the Canadian prairie provinces will be encouraged with the advent of the canal. This means corresponding industrial activity on the Pacific coast. Navigation in the ports of that coast is possible throughout the year. The improvement of those ports is one of the manifest duties of the Dominion, provincial and civic authorities. Aside from wheat and grain shipments via the Western route, the new waterway should provide for every Western Canadian farmer, rancher, fruit-grower, canner, and lumberman, within a thousand miles of any Pacific coast export centres, a cheap means of transportation.

The Canadian railroads are preparing for the likely effects of the canal upon their business. It cannot be ascertained how their freight rates will be affected until the actual operation of the new waterway.

This table is the result of a comparative study of the rates in the different ports with a view of determining the relative tax on commerce in each. In order o arrive at a condensed approximation of the cost of terminal charges and a comparison of the principal Pacific Coast ports, a purely hypothetic case has been ssumed of a 6 000 net ton register ship, 30-ft. draft, discharging and loading cargoes of 12 000 tons of miscellaneous freight, the ship remaining in port 19 lays. It is admitted that the assumption is not typical of ordinary occurrences, but it is apparent that, because of the complex and diversified tariffs, as well as ack of uniformity in freight staples, it is well-nigh impossible to obtain averages except through an assumption that is somewhat strained. The cost of tevedoring has been taken at the uniform rate of 40 cents per short ton at all the ports. This is not strictly true, but the labor unions may be relied on to qualize the cost by dictating the labor wage and the length of a day's work. Small miscellaneous items like water, etc., are insignificant, and have been umped in the table at $50 per voyage. The charge for handling is a variable sum. The attempt has been made to arrive at an equitable average for each port. The dock rental, in San Francisco, for lines having regular assignment, is 45 cents per month per linear foot of dock rental. A 500-ft. space will amount to $225 per month. A monthly sailing for the case docketer will make the rental $225 per voyage.

Comparative Costs to Ship and Cargo in Pacific Coast Ports.

WE are in a position to net our clients from 10 to 12 per cent. per annum on agreements of sale which we purchase. The security is first class, as we do not purchase agreements unless 50 per cent. of purchase price has been paid and property must be clear from mortgage.

We also do a general mortgage business netting clients 7½ to 8 per cent. per annum on conservative basis. We have been here nine years, and are in a position to loan safely.

If at any time you are coming West, we would be glad to have you make our office your headquarters while in Calgary. Have your mail addressed care of our office, and we will hold it till your arrival.

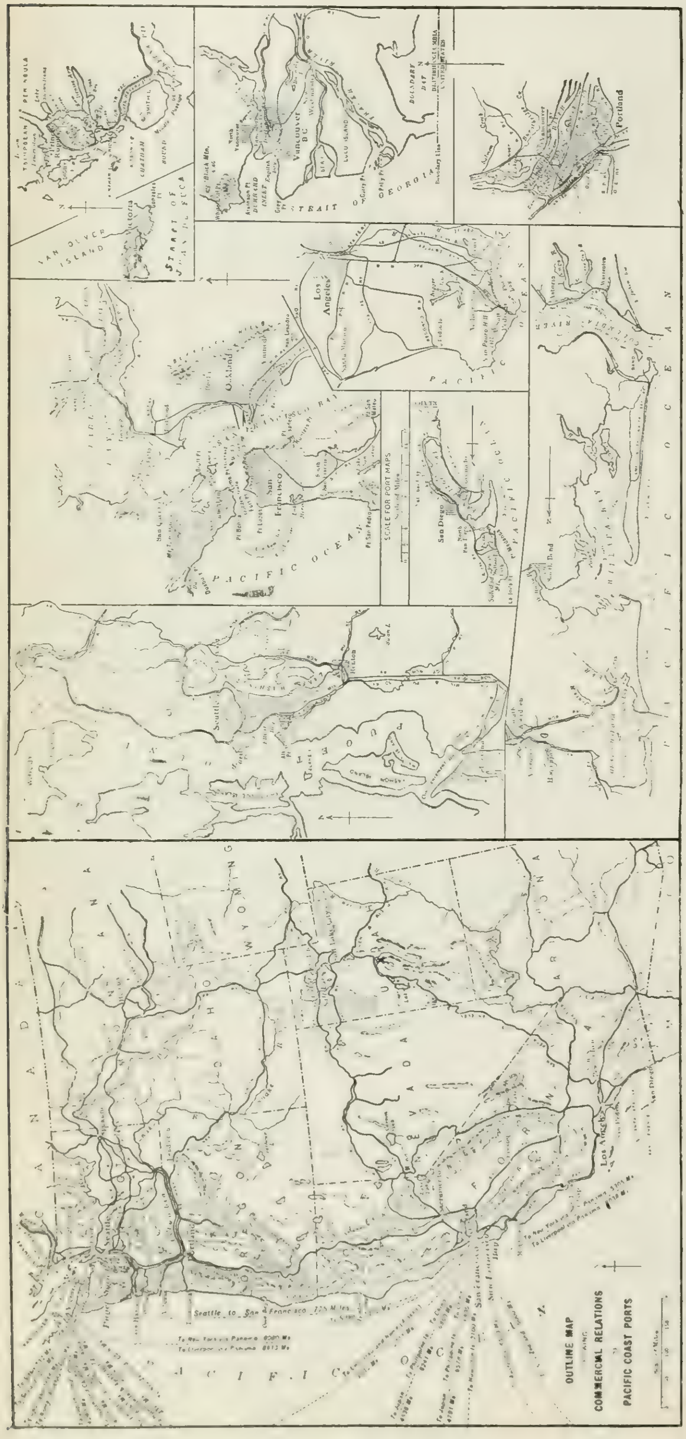
Objections have been raised that the climate in Panama will be an obstacle to the shipment of wheat through the Canal. A leading grain exporter of Toronto thinks otherwise. "The temperature in Panama," he tells The Monetary Times, "reaches its maximum at mid-day during dry weather. The days are practically all the same length, 6 a.m. to 6 p.m., and the interval of extreme heat short. The nights are tempered by cool winds from the ocean. The temperature and humidity of the Panama Canal should not be much greater than on the sea at both ends of the Canal. It is true that wheat will 'sweat' when subjected to an extreme change in temperature, but I do not think that this condition would be met in the Panama Canal, where the climatic conditions would vary very little in passing through the warm Japan current on the Pacific side to the Port of Panama for several days, and through the Gulf Stream for several days after leaving the Port of Colon. In other words, the extreme temperatures and humidity encountered at Panama would be approached and left behind gradually, and not encountered so as to produce a condition which would cause the grain to sweat."

The accompanying maps and tables prepared by Mr. H. M. Chittenden, a notable engineer, are of interest and of reference value.



◆

CANADA IS NINTH MARITIME NATION.

Ninth in the tonnage list of the maritime nations of the world, Canada takes its place. Those countries ahead of the Dominion are, in order, Great Britain, Germany, United States, Norway, France, Russia, Italy and Japan.

The total number of vessels on the register books of the Dominion according to the latest official figures was 8,088, measuring 770,446 tons, a marked increase over the total for the previous year. The number of steamers is given as 3,444, with a gross tonnage of 588,741. Estimating the average value to be $30 per ton, the value of the net registered tonnage at the end of the year would be $23,113,380.

New vessels added to the list during the year numbered 339, with a net register of 27,736 tons. Estimating the value of the new tonnage as 45 per ton, the value of the new vessels is given at $1,148,120. During the year 279 vessels were removed from the register. Of these 37 were wrecked, 15 stranded, 12 lost, 10 abandoned at sea, 12 foundered and 31 "reported out of existence."

The department estimates that 41,447 men and boys found employment on the ships of Canada during the year.

The provinces appear in the list as follows:—Nova Scotia, 2,105; Ontario, 2,014; New Brunswick, 966; Quebec, 1,511; Prince Edward Island, 149; British Columbia, 1,227; Saskatchewan, 5; Manitoba, 96; and the Yukon Territory, 15.

◆

DEVELOPED WATER POWERS.

The water power developed in Canada to-day amounts to 1,016,500 horse-power, of which 743,000 is turned into electric energy, 158,000 horsepower is used in connection with pulp and paper manufacturing and 115,500 in connection with various other industries.

The following table shows the amount developed by provinces.

	Electric.	Total.
Ontario	400,683	532,266
Quebec	191,252	300,153
British Columbia	88,145	100,020
Manitoba	48,250	48,300
Nova Scotia	1,875	15,272
New Brunswick	3,400	9,765
Alberta	7,300	7,300
Yukon	2,000	2,000

PREDOMINANT FEATURE IN SOUTHERN ALBERTA

Is Optimistic Outlook of Its Men—Past Year's Prosperity—Development of Surrounding Territory

BY ANDREW MILLER.

The Southern and Central portions of the province of Alberta recorded an increase of population, and a corresponding volume of business during 1912 without precedent since the possibilities of the district were first realized. While railroad construction has not yet reached the much desired network of mileage promised at the beginning of last year, there is hope that a substantial addition will soon be made to the transportation facilities of the outlying sections. Work is being prosecuted vigorously on the Grand Trunk Pacific and Canadian Northern lines into Calgary, both of which, officials state, will reach that city at an early date. The Interurban has made progress in organization and preparatory work. The Canadian Pacific Railway, with its millions of expenditures in Calgary and vicinity on locomotive and car shops, hotel, irrigation block, ready-made farms, and improvements generally, (in view of the anticipated increase of traffic when the Panama Canal is opened), will make Calgary second only to Montreal as a Canadian Pacific Railway point. Municipal improvements have called for money in large blocks, and this in one way or another was secured.

Financiers and Investment of Capital.

Visiting investors from Europe and the United States have been impressed with the opportunities and their visits were almost invariably followed by the enlargement of established concerns or the creation of new ones. Many new joint stock companies have been organized, some as close corporations, with millions of local capital, others made issues of bonds abroad, while old established firms have enlargements and additions to their premises and plants. Banks and loan companies have had as much business as they wished to handle.

Commercial houses and manufacturers have enjoyed a satisfactory year's business, and look forward to a continuation of the present state of trade with collections somewhat easier than a year ago. Money was undeniably tight until the harvesting of the crop was assured, and then the purse strings were loosened. The race for business is, and will be, keenly contested, but all are hopeful and scan the outlook with confidence.

Building and Growth.

Building trades have profited by a better year, many firms doubling their annual output of materials. A temporary shortage of cement and the delays in securing structural steel affected progress to a limited extent. While early to make a forecast, it appears probable that the same proportionate ratio of increase will be chronicled during 1913.

Tradesmen and laborers have for some months not been equal to the demand for their services, and while the harvesting of the crop proceeded, the shortage was very noticeable. Only minor labor troubles occurred during the twelve months, resulting in temporary tie-ups and some concessions by the employees. There is bound to be a surplus of labor for a few months during winter, with existing conditions, this is inevitable, though it does not necessarily imply hardship or suffering except in perhaps a few isolated cases.

The outlook for this year is good. The grain crop exceeded expectations, and cash returns will be greater because of better grade of grain harvested. More live stock is being kept and less dependence placed on grain alone. The farmers are better off than at the beginning of 1912, and will probably cancel much of their indebtedness. The problem of transportation has received much attention, and all the companies are still busily occupied.

Natural Resources Development.

Discoveries of natural gas in several places, and indications of oil in others have been reported from time to time. Just what these will do for the localities where they are found is largely problematical. Gas is to be had in large quantities, so large that the proposal to supply towns and cities along the route to Winnipeg and that city is said to be practical, and having successfully demonstrated the practicability of serving a stretch of 180 miles, including the city of Calgary, there is no reason why, with sufficient gas, the scope should not be so enlarged.

Along the proposed line of the Western Dominion Railway, running northward from the International boundary, there will be tapped a country admittedly rich in copper, coal, asphalt, oil, shales, clays, and possibly other valuable ores. Mining claims were filed this summer, and other locations of ore bodies in commercial quantities are waiting only the certainty of the railway's coming to make their knowledge public.

Ranch live stock came through the winter in good condition, and the local market with British Columbia is absorbing at good prices nearly all the offerings. With the assistance from the Dominion Government's Commission investigation it is likely the industry will be relieved from the uncertainty which rested upon it since the fertility of Alberta's lands turned prospective farmers this way and threatened to push the ranchmen over the Rockies. The business has the prospect of better days ahead.

The real estate business is on a more conservative basis than a year ago. Beyond a doubt the year has dealt favorably with Calgary's territory as a whole, and optimism is predominant in any outlook regarding its future.

◆

NEW WESTMINSTER DISTRICT

Growth of Industrial Activity—Railways Preparing for Future Business

BY K. MYERS.

Many important plans for the future formulated; over $1,000,000 worth of improvements carried out; record building figures attained and general prosperity enjoyed have marked the year of 1912 at New Westminster, B.C. The publication of the city's harbor plans, which will convert the municipal waterfront and the south arm of the Fraser River into a magnificent fresh water port is the first in importance of the plans for the future. Five hundred thousand dollars have been voted to start the sheme, an engineer, Mr. A. O. Powell, has been engaged, and tenders have been received for the building of the first dredge in connection with the work. Another ambitious scheme is that of a municipal gas plant, for which $225,000 have been voted, and which will give the city a cheap supply of gas, and still another inducement to industries.

The Dominion Government is spending the first $200,000 on the jetty at the Sandheads of the Fraser River, and preparations are being made to let the next two contracts of $800,000 and $600,000 each for the continued construction of their jetty, which will give the river a depth of twenty-five feet at low water from the Gulf to New Westminster. To-day there are twenty-six feet at high water.

Streets, new sewers and other permanent municipal improvements have been carried out at an expenditure of over two million dollars.

Railway Growth and Development.

Railway developments have been considerable. The British Columbia Electric Railway Company has added two lines to their city system, double-tracked another and built an interurban line from New Westminster to Millside, the site of the great Fraser River Mills, with a population of about 2,500. The Highland Park cut-off, which will expedite the service between New Westminster and Vancouver, is nearly finished. In further pursuance of their policy of centralizing their system in New Westminster, the company is now surveying with a view to building a line from Port Moody to New Westminster, and perhaps Coquitlam.

The Canadian Northern Railway has completed its line from Port Mann to Hope. It has also bought the site of the Royal City Mills in New Westminster for a sum approximating $1,000,000, bringing its holdings in the city up to about $1,750,000. The Great Northern is double-tracking its line from New Westminster to Vancouver at the expense of about $1,000,000. The Canadian Pacific Railway has built a new wharf and large freight shed.

Several Industries Started.

Industrial development has not lagged behind. The Western Paper Mills have commenced operating their $250,000 plant on the Brunette River. The British Columbia Brass Foundry, the Pacific Chocolate Company, the Canadian Lock and Novelty Company in Burnaby, the Crystal Dairy and the East Westminster Woodworking Company have all either started or are on the point of starting to operate this year. The British Canadian Lumber Company has built and is now operating the most up-to-date sawmill on the coast, with a ten-hour cut of 250,000 feet and a force of 250 men. The Vulcan Iron Works have increased their plant and wharfage; the Westminster Woodworking Company is doubling its plant on a new site; the Schaake Machine Works have been acquired by the Heaps Engineering Company, and their output will be trebled on a new site with 250 men employed instead of 110 as now. In all, about $250,000 will be invested in the works at once, and ultimately $500,000. The British Columbia Electric Railway Company have acquired additional acreage adjacent to their present car shops at a cost of $123,000 with the object of doubling the capacity of the shops early in 1913. English capital under the name of the British Columbia Transport Company has built a 600-foot wharf and bunkers and is developing local properties.

The Salmon canning season was a fair one for a third year. About 100,000 cases were put up as against 58,000 in 1911.

PROGRESS ON THE PACIFIC COAST

British Columbia's Industries, Lumbering, Mining, Railway Construction, Are All Prosperous—Cities' Characteristics

BY R. B. BENNETT

Another year of progress for British Columbia has been indicated by statistical figures from month to month, and it is apparent in every part of the province. In the recent past years, the greatest advancement was noticed in Vancouver. That city grew, and there was the great real estate vortex, into which was drawn money from all parts of the world. During the past year development has been widespread. Real estate speculation in Vancouver has quieted, and, while values are maintained and inside quotations are getting higher, sales are fewer. The situation may be likened to that in a gold camp. For the first two or three years after discovery the excitement is intense and fortunes are made. Then the larger operators come in and the conduct of things is strictly on a business basis. The winter this year is being felt by more people in Vancouver than for some time. The flush of the boom is departing and there will be some crushing as the city finds its own. This does not mean that Vancouver is going down. Instead, every indication is that it is going steadily ahead, and has a great future. All the big institutions—railways, banks, commercial houses—recognize that fact. But the city cannot go on the same lines as during the past few years. Conditions have to change and readjustments have to come. Real estate booms may create money, but while they do not create a substantial prosperity, they indicate resources, and in the development of these the progress of the city will be greater than ever.

Prince Rupert cannot be said to have made considerable advancement during the year, though, with extension of the completed line of the Grand Trunk Pacific, the northern terminus is laying the foundation for a big city. It will be more than a year, perhaps two years, before trains are running across the northern part of the province, and until then Prince Rupert will not show its real strength.

Lumber Operations Are Many.

Conditions generally have been excellent in British Columbia. In some respects the year has been the best yet. The two great industries, on which the prosperity of the province depends, were never in better shape. The lumber industry has enjoyed the best year in its history. The year before last a slump started when the announcement was made that damage had been done to the wheat crop in the north-west. This was not the only discouraging factor, as the foreign trade at that time was slack. Early in 1912, business bettered, and for the last six months it has been all that could be desired. Foreign trade is better than for years, local demand is strong and domestic requirements are great. Prices are firm, which means general satisfaction. This has meant several new sawmills, a feature of these being the number of smaller plants, cutting timber which before was passed over. There have been several large expenditures, among them being half a million in additions by the Canadian Western Lumber Company on the Fraser River, which is erecting a new mill at Comox and a cedar plant near its present large mill; $250,000 by the British Canadian Lumber Corporation, which has built a new and third mill on Lulu Island at New Westminster; and the large expenditure proposed by the Canada United Lumber Company, which was organized with a capital of $4,000,000, and took over the holdings of Mr. James C. Shields with the intention of constructing new mills. Some very fine timber is to be found on Vancouver Island, and the Empire Lumber Company, with holdings in the vicinity of Cowichan Lake, was one of the year's incorporations with a capital of $7,500,000.

New Westminster benefits largely from the operation of sawmills, and its location on the Fraser River also gives it advantages as a place for factories to locate. When the big schemes of improvement on the Fraser River are consummated it will mean much to the Royal City.

Copper Mining Receives Impetus from Prices.

Coincident with prosperity in the lumber industry is the activity of the larger mining companies. This is due to the increase in the price of copper, and with the figure at seventeen cents there is a big margin of profit. Nearly all large copper properties are low grade on the Pacific coast, and it is only when copper is over twelve cents that there is a sufficient margin of profit in their operation. Just now, the British Columbia Copper Company, the Dominion Copper Company, the Granby, and the Consolidated Mining and Smelting Company are going full blast. These are all located in the south-eastern part of the provine. On the coast is the Britannia, a few miles from Vancouver and away to the north is the immense proposition of the Granby company on Observatory Inlet. Large production by these companies means prosperity, though dividends paid go largely to American holders of stock. This is also the case in the instance of the Nickel Plate gold mine at Hedley, which steadily pays its dividends of 20 per cent.

Railway Construction Is Important Factor.

While activity has marked the two stable industries of the province, there has been another source of prosperity, which, though perhaps temporary, is a big factor at present. That is railway construction. It is confined to no one part of the province, and will be proceeding for several years to come. On the lower mainland, the Canadian Northern is heading toward the north. In the southern interior this same line has extensions in view, with electricity as the motive power, and the Kettle Valley line will soon give the direct route to the Kootenay. In the northern interior, both the Grand Trunk Pacific and the Canadian Northern Railway are employing thousands of men. On Vancouver Island the Canadian Northern is building up the west coast, and the Canadian Pacific Railway, after completing its trans-island line to Alberni, is projecting north to Hardy Bay. Then, too, the Pacific Great Eastern has got down to active construction and is stretching to Fort George from North Vancouver via Howe Sound.

Big interests are centred in railways, and construction will be followed by permanent improvements at terminal points. There will be substantial building at Prince Rupert for Grand Trunk Pacific purposes, but this will be surpassed on the Burrard peninsula, where the Canadian Pacific Railway, the Canadian Northern Railway and the Great Northern come together in the fervor of competition. Even there, for Grand Trunk Pacific purposes, but this will be surpassed on a magnificent location for its steamship wharves. Interest there does not centre around any one company, but includes all, and the point of interest is not centred anywhere between the mountains that lie back of North Vancouver and the south bank of the Fraser River.

Canadian Pacific at Vancouver.

In Vancouver, the Canadian Pacific Railway is working aggressively day and night on a new depot and has a million dollar tunnel in view under the city, besides wharf improvements. Moreover, it has thousands of men busy on its double-tracking towards Calgary. The Great Northern is creating docks on Burrard Inlet at huge expense, and will also have depot and yards at the head of False Creek. The Canadian Northern, according to its agreement with the city of Vancouver, will spend five millions in improvements in the next five years, also at the head of False Creek, and at Port Mann is rearing a new city. Another new railway creation will be Coquitlam,

Transcontinental corporations are not the only factors of railway development in British Columbia. None are more enterprising than the British Columbia Electric Railway Company, which has franchises in all the big cities and across country, including lighting in Vancouver and Victoria and gas in Vancouver. This company has rapidly extended its lines, until now its investment expenditure comes close on to $30,000,000. The electric lines between New Westminster has greatly facilitated settlement, and the extension to Chilliwack has been a boon to the lower Fraser Valley. At Victoria it has already expended a couple of million dollars in perfecting power on the Jordan River, and has entered on a duplication of this plant, involving about a million and a half. That this is necessary shows the expansion at Victoria.

Other Electrical Power Concerns.

Perhaps a cause of the aggressiveness of this company on the lower mainland is the enterprise of the Western Canada Power Company. This is an aggregation of Montreal capitalists who have developed power on Stave River, and are energetically bidding for business in Vanouver and New Westminster. They have no railway lines as yet, though some are projected. In the meantime they are securing orders for power, and when the next city lighting contract is to be awarded they will be in the field.

The other large electrical power concern in the province is located at Bonnington Falls, Kootenay, the works there having been in operation for two or three years.

Forestry, Pulp and Paper.

United States capital is interested in the pulp and paper enterprise at Powell River, which started operation during the year. The output at present is one hundred tons of pulp per day, but it is proposed to increase this to 250 tons.

DEPOSITS subject to cheque withdrawal. We allow interest at 3½ PER CENT., compounded quarterly on deposits of ONE DOLLAR and upwards. DEPOSIT RECEIPTS issued at 4%. DEBENTURES issued in amounts of $100 and upwards for periods of 5 years with interest at PER CENT. per annum payable half-yearly. (Coupons attached) Moneys can be deposited by mail.

Another large coast enterprise along the same line is at Ocean Falls; in this American and British capital are together. This company is doing much sawmilling.

The British Columbia government has been active in perfecting its forest department, and this promises to be second to none. It has urged the railway companies along, and saw that the Pacific Great Eastern got down to business. It has gone ahead with the construction of roads to meet the needs of settlers. Survey of lands in different parts of the province is also being energetically prosecuted with a view to being able to supply information to intending settlers. There is good land in the valleys of British Columbia, but, like in any other country, the man who intends to settle should personally investigate what he is purchasing. With no untoward features visible the present year in British Columbia should show a continuation of the progress made during that just ended.

NOVA SCOTIA IS SATISFIED

Industrial Activity Was Notable Last Year—Plant Extensions Numerous—Good Prices for Crops

BY E. A. SAUNDERS.

Last year was a record one for the industries of Nova Scotia. The extension of the steel works at Sydney and Sydney Mines, the opening up of new areas by the Dominion Coal Company, and the large increase of output of the mines controlled by this company helped to give this province a foremost position among the provinces of the Dominion.

Notwithstanding the fact that the coal mines of Nova Scotia produced practically 6,250,000 tons more coal than 1910, the increase for 1912 exceeded this amount. The steel output of the province was also considerably beyond that of 1911, as large contracts were made with the railways in course of construction. While perhaps the railway car output of the plants at Amherst and Halifax was not as great in number as in the previous year, the output last year had a greater value on account of the large number of steel cars having been ordered by the different railways.

New Car Plants.

At New Glasgow, work was commenced on the building of a large steel car plant for the Eastern Car Company, Limited. The output of these works will be about twenty cars a day, and the enterprise reflects great credit on the promoters. At Amherst, the foundations were laid for the new motor car plant, and at present the works at Kentville owned by the company building the plant at Amherst, is overtaxed with orders.

The merging of the different brick manufacturing companies of the province has divided the markets, and contractors are supplied with their requirements with better dispatch. The output of bricks for the province last year amounted to about 23,000,000, but the demand was much greater, and several of the plants are now being enlarged to cope with the increasing demand.

Representatives of Scotch capitalists recently visited several sections to inspect the clay deposits, with the intention of erecting works for the manufacture of tiles, drain pipes, etc. Parties are also interesting themselves in the oil shales of this province, on which articles have recently been written by Dr. R. W. Ells, in which he compares these shales to those of Scotland, where the industry has been a profitable one. While the fisheries of the province were valued at over $10,000,000 in 1911, an increase was made last year. Prices were good, which tended to make trade good along the shore.

From all sections of the province there is call for labor, and rates of wages paid for skilled labor especially, are in keeping with those anywhere else in Eastern Canada, with a lower cost of living.

Farmers Had a Good Year.

Generally speaking, the farmers had a good year. The apple crop, while not as large as the phenomenal crop of 1911, exceeded 1,000,000 barrels. Good prices were realized in England. The crop of small fruits, such as plums, etc., was fine, but prices realized were not as satisfactory as in 1911. The hay crop of the province turned out better than expected, and the farmers disposed of it at gratifying figures.

Several large farms were purchased by a nobleman who intends bringing out Scotch settlers. After being shown over the various provinces, this gentleman came to the conclusion that Nova Scotia offered the best inducements to intending settlers of small means, and he purchased these farms with the intention of dividing them and assisting in every way those who will settle on them.

The policy of the government of Nova Scotia of assisting new settlers who can furnish certificates of good character, etc., to the extent of eighty per cent. of the cost of farms they wish to purchase, has aroused some interest in England and a number of inquiries have been received, with the result that several have taken advantage of the offer.

At Halifax, there is generally an optimistic feeling. The wholesale merchants report having had a good trade last year. Collections were said to be satisfactory. The building activity in Halifax at the present time is probably unprecedented in the history of the place.

Big Engineering Enterprises.

The $1,000,000 pier for the Intercolonial Railway is progressing as well as can be expected. For the construction of this pier a scow was completed on which will be placed a pile driver, probably the largest in the world. This scow is 120 feet long and 72 feet wide, and cost $85,000. The Nova Scotia Construction Company, Limited, has the construction of this pier in hand. The pier will be one of the finest on the Atlantic seaboard.

The engineers of the Dominion Coal Company are making plans for an up-to-date coaling pier for Halifax. The capacity of the pier will be in keeping with the harbor improvements planned, to provide for the increased tonnage expected at this port.

The enlarging of the premises and plant of the Acadia Sugar Refining Company at Woodside to almost double the capacity of that destroyed by fire, will enable this company to handle a larger percentage of business than formerly.

HAVE FAITH IN BRITISH COLUMBIA'S FUTURE

People of the Pacific Coast Province Have Substantial Foundations for Optimism

BY C. D. RAND.

During the year of 1912 British Columbia has been visited by a large number of investors from all parts of the world. Many of the visitors have been lavish with advice. Some have been pessimistic and claim that speculation in the West has run riot, and that disaster is sure to follow in the almost immediate future.

Investigation seems to indicate that the parties who have so predicted, are those who have come to this province with a view to making investments, and who seem to think that the mere fact of them wishing to honor British Columbia by investing here should entitle them to special prices on properties they desire to purchase, or that the enterprises in which they wish to embark should be so pleased to have them on their list of subscribers that a special inside price should be made for their particular benefit.

Prices Are Justified.

On the other hand, the majority of our visitors have undoubtedly been impressed with the development taking place in the province, and, after careful investigation of local conditions, have not hesitated to say that the prices demanded for real estate and other securities are quite justified, and have backed their opinions with their money.

The real estate market in Vancouver has not been so active as in 1910 and 1911, but the activity in those years was exceptional. The business done in 1912 has been highly satisfactory and of a substantial nature. Building operations have been active and trade has expanded in a remarkable degree.

Victoria real estate has continued active throughout the year and is going ahead, and all classes of business in that city are going ahead in a most satisfactory manner.

There has been a general impression that Victoria is slow, but it seems to have caught its second wind and is now strictly in the running with the other active cities of the Coast.

Thankful to Live There.

The smaller cities of the province are all doing well and there is apparently no cloud on the horizon.

The large amount of railway building in the province and the opening of new districts for settlement and commerce are all adding to the general prosperity. The mining interests are taking on new life, and it is confidently expected that this industry will be much more active in 1913 than for several years past.

The people of British Columbia believe in its future and feel thankful that they are able to live in such a favored locality.

◆

According to the latest trade returns the external trade of Canada amounts to about $106 per capita. This places Canada on a par with the per capita trade of Great Britain, which figures out between $105 and $106. The United States is far behind the showing made by Canada, having a per capita trade of about $36 per head.

OWNING and exclusively controlling over $7,000,000.00 of Inside Saskatoon City Property, we are in a position to afford Investors the most favorable facilities for making high grade investments.

We have a specially organized department for looking after non-resident client's interests, rents, collections and buildings, particulars of which we will be pleased to furnish to enquirers.

Corporations or private firms looking for Business, Trackage, Wholesale and Manufacturing Sites cannot do better than place themselves in communication with us, when we will be pleased to furnish full description of properties most suitable for their needs.

MONEY FOR THE WEST

Twenty Years Ago, Cash Went West, Circulated for a While, and Then Turned East Again—Opportunities Have Made Some Changes

BY R. T. RILEY.

It seems only the other day since a few men in Winnipeg got together and decided that something ought to be done to try and hold some money in the West. Cash came in, like a tidal wave, in the fall of the year to pay for the few millions of bushels of wheat and the few thousand head of fat cattle that we had to sell. Then like a tidal wave it went out again to pay obligations that had either been held over for the coming of the tide or had been timed to mature just after its arrival. The result was that this western country was left just as badly off for money as ever. We decided to support all local institutions that would hold the money here and keep it circulating.

One of the first institutions to be started after this was a leading western life insurance company, organized by Mr. J. H. Brock. Only Mr. J. H. Brock can tell the amount of work that had to be done first to get the stock subscribed for so new a venture and later to write business for a company whose avowed object was to invest its premiums in first mortgages in "the wild and wooly west." The first two million dollars of business written during the first year was obtained at a far greater effort than that required to write the twenty-five million dollars of business which was written by the company during the past year. Our own friends, though they were anxious to see the company win, were full of misgivings, and thought that the best we could hope would be to grow into a respectable little local concern.

R. T. RILEY.

About the same time, the bank, whose head office was moved to Winnipeg last year, had total assets of under $5,000,000. Mr. Webb, as general manager, had visions of what might be done in the West. He told his board he believed that if the work were properly conducted this business could be brought up to $10,000,000 within a very few years, and that it was in the West he wanted to open up his new branches and enlarge his operations. Some of his board, whilst they admired his energy and enthusiasm, accepted his policy with anxiety, but Webb was right. The West did well to the bank and the increase of their business from $5,000,000 to $65,000,000 was, in a large measure, due to the activities west of Lake Superior.

I can remember, when in addition to looking after the interests of a wholesale business, I had invested for clients and friends the sum of $500,000 in first mortgage securities. For one of the annual meetings of the Winnipeg Board of Trade, I undertook to find out how much money was loaned out at that time in first mortgage securities by various companies and agents operating from the city of Winnipeg, but with eastern moneys. It totalled the respectable figure of $16,000,000. To-day, the companies with which I am associated, whose headquarters are in this city, have total loanings on first mortgages of over $30,000,000, and these companies are not by any means the biggest factors in the loaning business though, perhaps, they are amongst the largest whose headquarters are in this city.

All this means that the West is stretching itself and growing. It means something more. It is only a forerunner of the big things that will come a little later, provided only that the price of farm products can be maintained at figures yielding a good return to the man who cultivates the soil. Let the farmers of the West do well and the rest of us will also prosper.

◆

UPBUILDING OF WINNIPEG

From a Prairie Patch to a Modern Progressive City—Big Grain Market—Operation of Utilities

BY G. S. LAING, C.A.

Winnipeg, so called after the lake forty miles north, and derived from the Cree Indian words, Win, murky, nipi, water, lies half-way between the Atlantic and Pacific coasts, and is situated at the junction of the Assiniboine and Red Rivers, where in 1738 La Verandrye, the first white explorer, visited the spot, and subsequently erected Fort Rouge. In 1821 the Hudson's Bay Company built Fort Garry, and rebuilt it in 1835; the same company also erected Fort Douglas.

The area of Winnipeg comprises some 15,138 acres, taking in the sites of the three trading posts. In 1870, the year the province of Manitoba was inaugurated, the first census of Winnipeg was taken, the population being 213; in 1885 it was 19,574, according to the assessment records, and in 1902, 48,411, in 1911 172,000, while it is estimated to-day to be 200,000. Between the years 1900 and 1906 the city more than doubled its population.

Indications of Progress Made.

In 1871 Winnipeg had one school and one teacher, with an average attendance of thirty-five; in 1900, 16 schools, with 119 teachers, and an average attendance of 7,500; while in 1911 there were thirty-seven schools, the value of which, with sites, was $3,500,000, and an average attendance of 19,750, or over eleven per cent. of the population.

Perhaps the development of the city is indicated best in the value of its building permits and the total of its bank clearings, tabulated on other pages. Its assessment is shown in the following figures:—1900, $26,973,650; 1905, $65,662,240; 1910, $185,870,140; 1912, $214,360,440.

Winnipeg of to-day is a most progressive city, whose population is mostly made up of citizens of the empire, and whose loyalty is unfailing

A sanitary and clean city is Winnipeg, where stringent regulations are enforced, tending to make it one of the most healthy cities in the world, the death rate last year being only 13.6 per 1,000 inhabitants.

Winnipeg is the greatest grain market on the continent; in 1911 the receipts of wheat alone were 101,326,250 bushels, while Minneapolis, ranking second, received 96,647,850 bushels. The crop value of the Western Canada crop of 1911 approximated $260,000,000, and the financing to garner and ship was handled through the twenty-two chartered banks in Winnipeg, with their forty-two local and 645 country branches throughout the Western provinces.

Municipal and Industrial Plants.

The hydro-electric power works, water works plant, street lighting system, stone quarry, fire alarm system, high pressure fire service water works, asphalt plant and gravel pit, are municipally owned. The power plant and line took five years to complete, costing approximately $4,000,000, and is situated on the Winnipeg River, seventy miles from the city.

There are over 241 factories, employing over 15,000 hands. In addition, the city has unexcelled railway facilities, some twenty tracks radiate from it, while the Canadian Pacific Railway yards are the largest individual yards of any railway corporation in the world, the trackage in them being 135 miles.

Demand for Capital Unlimited.

Unlimited capital is necessary to keep up the progress of the West, and at the present time capital is coming into Winnipeg for investment totalling many millions per annum, from England, Scotland, France, Belgium, Holland, and the United States, more particularly for mortgage securities, and notwithstanding the great supply, there has been no falling off in rates, in fact, they have rather tightened, because of the demand.

The early citizens of this metropolis deserve credit, for it is on them that the burden of financing and of upbuilding the country has fallen. Most of them were born in the Eastern Provinces of Canada, and came west in their youth, to the then desolate and undeveloped regions of the prairie. They were far-seeing, plucky, and optimistic, choosing to stay in Canada, and suffer the inconveniences of a new and unsettled district in preference to the more progressive centres of the United States where the majority of their brothers and friends were seeking success. They were the men who, apart from their private interests, struggled with the public economies, questions and enterprises of the whole West. They well and truly laid the foundation of a city, which to-day is a model of excellence, is clean, substantial, artistic and progressive. In their own success they have had their reward.

SURETY COMPANIES AND CANADA'S GRAIN TRADE

Their Important Relationship—Business Carried on is a Vital Factor of the Dominion's Industrial Life—Crop Movement and Public Credit

By GEORGE WEIR

To appreciate fully the relationship of surety companies in respect to the handling of grain, it is necessary to briefly summarize the more important features of the Canada Grain Act, and the statutory requirements obligatory on those engaged in this business. The Canada Grain Act was placed on the statute books in April, 1912, and repealed the Manitoba Grain Act and amendments thereto. It may be considered therefore the last word in legislative control of the grain business, based on years of experience in the supervision of this important trade. The act, is may be noted, is most comprehensive, and detailed instructions are laid down for the proper carrying out of its conditions. Canada has been divided into two inspection divisions,—an eastern and western. The eastern comprises all Canada east of Port Arthur, and the western all west of that city. The duties of administering the act devolve upon a board of grain commissioners, three in number, having their location in Fort William. In each district are chief inspectors, inspectors, deputy-inspectors, and various other officials necessary to the proper carrying out of the act.

All subordinate officers are required to furnish surety for the due performance of their duties:—The duties pertaining to individuals or firms engaged in the trade, such as track buyers, commission merchants, owners of terminal, public, country or eastern elevators, are fully outlined, and each must furnish surety. The forms necessary to record the various transactions are furnished, and any offence under the act must be very deliberate indeed, so clearly are the respective duties defined. Fire insurance must be maintained on the contents of all warehouses and elevators, and in every case surety must be furnished before a license will be issued empowering any firm or individual to do business. The license year runs from the first of September, till the 31st of August following.

Protection is Absolutely Essential.

The question of surety is a fundamental principle, and one of the first considerations recognized by the government in its enactments from time to time, respecting the due carrying out of its requirements in the regulation of trading in grain. The business has now reached such dimensions and become so diversified that protection to the farmer, and others engaged in the marketing of grain renders it absolutely essential as a government requirement, to furnish surety for their protection, and this is accepted as a matter of course. Speculative methods have been always more or less associated with dealing in wheat, and in fact are almost inseparable from it, and difficult to eliminate owing to the very nature of the trade. Up till the advent of the Canada Grain Act the penalty of bonds exacted rarely exceeded $50,000. The new act, however, bases the amount of surety to be furnished in respect to elevators at a unit per bushel on the capacity of each, with the result that surety bonds are now required in amounts ranging to one million dollars, in individual cases. The surety companies therefore have become a very important economic factor in the scheme of things, and of considerable moment to the welfare of the country. The prosperity of the Dominion is so bound up with the wheat crop, that any agency which facilitates the speedy moving of the crops is entitled to public credit.

Place of Equal Prominence With Banks.

Further the financial safety with which business transactions may thus be consummated gives a steadiness and easy feeling to the whole grain situation. It is commonly accepted among the general public that the banks, and they only, are the sole mainstay in making possible such vast transactions as are carried through in this business, and materially assisting the product of the farmer to speedily reach its ultimate destination. There is a further important factor however in the situation, and that is the surety company, which stands behind the various firms or individuals in their dealings with the public. When it is remembered that the obligations undertaken by the surety practically guarantee fidelity, credit, and solvency, a very material factor is present, of practically equal importance to the banks.

Both the surety and the bank are of course in business for profit, but the former has no such collateral as the latter invariably obtains, and assumes its obligations on the financial strength, business integrity and moral reputation of its clients. The grain trade is accepted as the back-bone of Canadian industrial activity. The whole country's prosperity is more or less bound up with or regulated by a good or bad harvest. If a contingency were to arise in which no surety company was prepared to assume the responsibilities entailed by the act, a complete disorganization of the trade would undoubtedly result, requiring drastic legislative enactments.

Owing to the amount of surety required, personal sureties would be impossible to obtain. It is therefore not inopportune to claim for the corporate surety as an economic factor in the situation, considerably more credit and prominence than is commonly given it, or at least of sharing a place of equal prominence with the banks in regard to facilitating the carrying on of the grain business. When it is remembered that the farmer, firm, or corporation who sells, consigns, or stores grain are indemnified against financial loss, a situation is revealed unique in ordinary business procedure and one not obtaining in any other commercial line.

Elimination of Speculation.

An excellent feature and one of great importance to the country, resulting from the requirement of surety, is the elimination of undesirable or speculative firms and individuals, with the consequent tendency of elevating the morale of the trade. If commerce generally were as happily situated in regard to security, from financial loss as those engaged in the business of dealing in grain, a utopian era would dawn on Canadian commercial enterprise.

In connection with the grain trade it might be interesting to note that the officials representing grain firms at various points are required to furnish fidelity bonds. There are hundreds of agents, grain buyers, and payors, necessary to the trade as an executive force ,and all are under bond. The indemnity, of course, is in favor of the employer, but the corporate surety again acts as guarantor in these cases, and the magnitude of the obligations thus assumed in connection with the handling of grain in all its ramifications is emphasized.

There is no intention in this article of making any special pleading on behalf of surety companies, but rather to briefly outline the relationship of the corporate surety to the grain situation. Enough may have been said to establish a claim therefore with the general public to a more prominent appreciation of the essential services rendered, and of the obligations undertaken facilitating the carrying on of a business so vital to the industrial life of Canada.

◆

Many of the insurance companies carrying on business in Italy have resolved to transfer it to the State Life Insurance Institution, in consequence of the difficulties which would arise if they intended to continue operations under the onerous conditions of the new law. Of the native companies, the Popolane, with a policy business of 74,000,000 lire, the Mutua Italiana, with 19,000,000 lire, and the Reade, with 129,000,000 lire, have come to an understanding with the State institution, and that this example has been followed by the New York Company, with 63,000,000 lire, the Prussian, with 25,000,000 lire, the Berlin, with 5,000,000 lire, the First Hungarian, with 12,000,000 lire, the Urbaine, with 21,000,000 lire, and the Norwich Union, with 27,000,000 lire. The German companies insterested are satisfied with the conditions under which the transfer will take place, and that they will be able to devote to new German business the amounts released from the Italian branches.

The disability feature in the policies of a regular life insurance company is a modern innovation on this continent. In Europe, however, Germany has been the principal exponent of the various benefits dependent upon total and permanent disability for over thirty years, and Russian companies are also considerably interested in this subject. There are abundant German statistics, but they are not considered applicable to conditions in Canada. They consist of the experience of railway employees and miners, the former being subdivided into three sections, namely, (a) trainmen, (b) other than trainmen, (c) office employees. The German Government has also published statistics relating to compulsory insurance against permanent disability. Since the policyholders in life insurance companies here are medically examined lives of a different social class from the risks comprising the German experiences, the latter are of little or no value to Canadian companies in determining the cost of the disability benefits granted by them.—S. H. Pipe, Toronto.

GLASS INSURANCE IN CANADA

Business is Growing Considerably — Causes of Accidents to Plate Glass—Association of Underwriters of this Insurance Has Headquarters in Toronto

(Contributed by an Expert).

The business of glass insurance in Canada is transacted by fifteen companies holding Dominion licenses, and most of these operate over the whole of Canada. In Halifax, Montreal, Toronto, Winnipeg and Vancouver there are some provincial companies which do a local business. In the Dominion blue book for 1911 the premiums for that year are given as $272,205. Only three of the Dominion licensees do glass insurance only; all the others make it a side line with such classes of insurance as accident, employers' liability, sickness, burglary, guarantee, automobile, steam boiler and sprinkler leakage. The possible volume of glass insurance is small, and its division among more than twenty companies makes the business of some rather meagre. Because of this, and the special knowledge required, some companies licensed for the business later decided not to become glass underwriters. As a rule, mortgagees and banks do not ask for glass policies with their securities for loans.

Plate Class Insurance.

Plate glass insurance came into vogue in Great Britain almost two centuries later than fire insurance, and in Canada its origin is also of a late date. In recent years Canadian merchants have introduced much plate glass into their new buildings, and in the older ones as well; they have banished window frames and set large plates, in some cases they have clamped the edges of the panes or bent the glass around a corner; the use of glass showcases, shelves and mirrors has increased; glass has been placed on top of counters and desks, in pavements, awnings, skylights, signs and screens. It has been chipped, wired, embellished, jewelled, embossed, cut, stained, bevelled, rounded, polished, and made into prisms.

The capital invested in glass is now a large sum, and the necessity for protecting this outlay by insurance is at once evident when mention is made of a few of the ways in which valuable glass may be accidentally damaged. Wind storms, cyclone, explosions and landslides have been responsible for many breakages at one time, and Suffragettes may yet invade this country. A runaway horse, an automobile beyond control, a dog jumping after his master, bad boys with stones, good boys with balls, window dressers, painters, drunken men, burglars, falling icicles, the settling of a building are a few more of the causes.

Risks of the Business.

Considerable underwriting skill is required in the business, and an elaborate manual is used by the companies. The endeavor has been to base the amount of premium upon the cost of replacing the broken glass, as well as upon the degree of danger in its location.

Exterior glass is more subject to accident than interior, bent will break oftener than flat, movable showcases are not so safe as stationary ones. There is more danger in one part of a city than another, as between a store on a busy street and a public building in its spacious grounds. Then there are earth towns and rock towns, towns on the frontier, where life is rough, and quiet inland towns, and towns on sinking formations—all these require separate classifications. There are towns where all sizes of glass are kept in stock, towns on railways where large pane replacements have to be sent on a flat car, and villages where as yet there is no railway; the rates have to be made to fit these conditions.

Terms of the General Contract.

The general contract is one under which the company will replace, taking the salvage, but with some risks, where the glass is of a special or fancy kind, and costly, the policy requires the assured to state the cost, and the insuring company reserves the right either to replace or to pay the stated cost. Heretofore, a policy has been for one or three years, but for the future the companies have decided to write only yearly policies. This is the practice in Great Britain and in the United States.

A little over three years ago a glass underwriters' association for Canada was formed, with headquarters in Toronto. A well-considered constitution was adopted, and a large amount of time was given by several well-known insurance men in drafting a policy form, and in compiling a tariff manual, which runs over fifty pages, and has been copyrighted. There are sixteen companies in the association. The president is Mr. Edward Willans, and the secretary, Mr. R. J. Maclennan.

HAIL INSURANCE

Western Farmers Pay Large Aggregate Premiums—Mutual and Joint Stock Plans—Government Insurance Not Successful

By a Hail Insurance Expert.

In Manitoba, hail insurance is carried on by both mutual and joint stock companies, in Saskatchewan and Alberta by joint stock companies only. Mutual hail insurance is conducted on the assessment plan, the maximum rate of assessment being fixed by the articles of incorporation or by the by-laws of the company. When losses are severe and an assessment at the maximum rate will not pay expenses of operation and loss claims in full, the funds available after paying the expenses are distributed pro rata among claimants. In some instances claimants have received under this system only 30 per cent. of the amounts of their claims. Joint stock hail insurance is conducted on the definite premium and definite indemnity principle, and in no instance have the joint stock companies failed to pay their loss claims in full.

As to Government Systems.

Up to 1900, when joint stock hail insurance was first introduced in Manitoba, mutual hail insurance was the only form of protection the farmers of that province and what was then the North-West Territories could secure against loss from hail. It had proved so unsatisfactory that the Territorial Legislative Assembly enacted in 1901 an ordinance, taking effect in 1902, and providing for a system administered by the Government. Owing to the abuses to which anything in the nature of Government insurance of this character is sure to be subject, this system proved unprofitable in both Saskatchewan, where it remained in effect up to and including 1908, and Alberta, where it was continued until 1911, inclusive. In these provinces, when the Government system was abolished provision was made for permitting to carry on hail insurance therein only such companies as were approved by the Lieutenant-Governor-in-Council, and under this provision only joint stock companies have been admitted.

During the last five years the volume of hail insurance done by joint stock companies in Manitoba has greatly increased, the business of the Central Canada Insurance Company, of Brandon, for instance, being four times as great in 1911 as in 1907, while that of the mutual companies has decreased. In Saskatchewan the companies operating there wrote in 1911 approximately five times as much hail insurance as was written in any one season under the Government system, and will this year show a large increase over 1911. In Alberta, where the Government system had proved even more unprofitable than in Saskatchewan, company hail insurance has this year been very liberally patronized, and a comparison of the results they are able to show from their first season of operation in that province with those of the Government system in previous years will be of great interest.

Graduated Rates of Premium.

Several of the joint stock companies transacting hail insurance use graduated rates of premium based on the hail experience of the lands on which insured crops are growing, lands on which little or no destructive hail has fallen during a period of years being charged lower rates than other lands with a less favorable experience. Other companies use flat rates, all risks being charged the same rate of premium without regard to the hail experience of the lands or the districts in which they are situated. There is a great difference of opinion as to which plan is the most equitable. If it can be shown that some districts are more subject to hail than others, there would be a corresponding variation in the hazard of risks undertaken in different districts, and in that case the graduated rates of premium plan would seem to be based on sound insurance principles. The results companies using the two plans and competing in the same field are able to show during a number of years operation will demonstrate the soundness of one or the other.

Value of Growing Crop.

The actual value of a growing grain crop is represented by what the owner has invested in preparing the land, seed, cost of seeding, and a fair rental for the land occupied. It is quite obvious that the prospective or speculative value cannot be determined until the grain is harvested, threshed and marketed, and it is the actual investment that companies aim to insure, but the farmers of the West are inclined to speculate in hail insurance, and many of them insure the same crop in several companies, and the companies permit this for the reason that there is no moral hazard, it being impossible for the owner of the crop to in any way contribute towards a loss from hail. This speculation should be discouraged.

GUARANTEE INSURANCE

Its History in Canada—Seventy-five Per Cent. of the Leading Institutions of America Patronize Corporate Bonds of Suretyship

BY HENRY E. RAWLINGS.

The system of guarantee insurance, which was originally the guaranteeing of the integrity and faithful accounting of an employee to his employer, but which now embraces bonds required in the Courts, and for the guaranteeing of the fulfilment of various kinds of contracts, classified as surety risks was introduced into Canada in 1863, by the late Edward Rawlings, whose name was, and is, synonymous with that of The Guarantee Company of North America, which company he founded in 1872, subsequent to the liquidation of the European Assurance Society of London, England, of which he was the Canadian representative, and the records of which he took over with those of the Citizens' Insurance Company (a defunct Montreal insurance company conducting a miscellaneous casualty business), into what was then the Canada Guarantee Company, chartered in 1851, but which, in 1881, changed its name to that by which it is presently known.

Had to Overcome Prejudices.

Probably the greatest difficulty of the pioneer of guarantee insurance was to overcome the prejudices of the then old and even younger financial and commercial men against a system that suggested a lack of confidence in any of their employees and of others that it was as unfeasible as it was unnecessary. However, by persistency and indefatigable labors and arguments, these same men gradually became appreciative of the fact that the system, not only assured them of an indemnity in the event of a loss through a possible dishonest employe, but, what was more important, it reduced to a minimum the contingency of loss through a dishonest employe, in consequence of its searching investigation of the employe's previous record and character, and the periodical revision of his mode of living, associations and proclivities—the first tending to cull out the undesirables, and the second exercising a moral and sustaining influence upon those found worthy to occupy positions of trust.

This accomplished in Canada, Mr. Rawlings then introduced the system into the United States, and though the financial and commercial interests of that country were somewhat diffident and slow to appreciate its merits, yet the system was quick in its adoption as compared with Canada. It was only a few years later (1884) when new companies began to be formed in the United States for the writing of guarantee and surety risks and some of the English liability and accident companies added "guarantee insurance" to their lines of business.

Premium Rates Tumbled.

Incidentally, in consequence of the "scramble" for business at any price, premium rates began to tumble in Canada, as also in the United States, from 1¾ and 2% to the present rate of ⅓ and ¼, and even 1/10 of 1%, fifty per cent. of which, notwithstanding the comparison, is considered by insurance departments, as a sufficient unearned legal premium reserve—so that there are now some fourteen English Canadian and United States companies (including The Guarantee Company of North America and American Surety Company of New York, which transact only a guarantee business), writing, in addition to their many other lines, that of "guarantee insurance," the premium revenue, in Canada, from which in 1910-11, on some $108,500,000 of risk, amounted to $444,628.00 (over 25% of which was paid to United States companies), while, on the other hand, the losses incurred for the same period were $152,190, and the unsettled claims at the end of the year amounted to $96,000 (of which $15,000 was being resisted by two United States companies).

The claims paid for and during such period, and which included unsettled losses carried over from the previous year, were $100,253, to which 15% to 25%, it is safe to assume, may be added for further disbursements in settlement of losses now in process of adjustment and for losses which the assured has from three months to five years, or even more, after cancellation of the bond, according to its terms, for discovery and making of claim; and it might be pertinent to mention here that it is a practise amongst companies writing guarantee and surety risks to take credit for their legal unearned premium upon cancellation of a risk, which, though permitted by the insurance departments, is contrary to the principle involved, for the reason that the premium is certainly not fully earned and adaptable as a credit to surplus, until the period for discovery and notice of a loss by the assured has expired.

There is an idea among some of the newer recruits to guarantee and surety circles—and some have even so stated—that the system is in its infancy, but whose idea of broadening it out appears only to be to the extent of acquiring another company's business at the sacrifice of an equitable and consistent rate and without regard to the cardinal points or functions of the system. However, when anyone, with a knowledge of the early history of corporate suretyship in Canada and the United States, considers what work was done in those pioneer days of 25 to 50 years ago (since which time one Canadian and some half-dozen United States companies have become insolvent), what was and has been accomplished both as to building up the system and its resultant moral and valuable influence, as well as its economies and conveniences, and, further, that probably as much as seventy-five per cent. of the larger financial and commercial institutions of this country and the United States require that all their employes occupying fiduciary, and, in many cases, clerical and menial positions, furnish a corporate bond of suretyship, not only for the faithful performance of the trust reposed in him, but as a guarantee of his previous good character, it may be concluded that the first object of the system and hope of its projectors, have fairly well reached maturity, and that a continued demand for it must, and will, be automatic with the expansion of the country and the increase of new enterprises and industries.

MISCELLANEOUS INSURANCE RESULTS AND OUTLOOK

Companies Are Generally Satisfied with Returns — Heavy Loss of Life and Many Accidents During Past Year

Miscellaneous insurance is a term which now includes a multitude of underwriting forms. The results of companies transacting other than fire and life insurance during 1912 have been generally satisfactory. The outlook for business in 1913 is excellent, as the demand for all forms of insurance is increasing.

Insurance business other than fire or life was carried on in Canada during 1911 by fifty-one companies: 20 Canadian, 10 British and 21 American. Thirteen of these companies likewise transacted fire insurance. In addition to these fifty-one companies, there were five fraternal orders or societies which carried on sickness insurance and also life insurance.

Of the twenty Canadian companies which carried on business other than fire or life, eighteen transacted miscellaneous classes of business only. Of these, eleven transacted sickness insurance, ten, accident insurance, five, plate glass insurance, four, guarantee insurance, four, automobile insurance, three, steam boiler insurance, three, burglary insurance, one, weather insurance, one, live stock insurance, and one, title insurance.

Combined Assets and Liabilities.

At the end of the year 1911 the assets of these combined companies amounted to $5,587,513.89.

Their total liabilities amounted to $1,409,703.69, made up as follows:—

Unsettled losses, $307,209.07; reserve of unearned premiums, $944,007.45; sundry, $158,487.17; total, $1,409,703.69.

An idea of the scope of miscellaneous insurance in Canada can be obtained from the following figures, showing premiums received for each branch:—

Automobile	$ 253,550
Personal accident	1,850,868
Guarantee	444,628
Plate glass	272,205
Steam boiler	126,506
Burglary	60,669
Sickness	880,780
Inland transit	37,811
Employers' liability	2,099,639
Sprinkler leakage	37,238
Title insurance	2,289
Live stock	100,257
Hail, weather and tornado	229,134

These figures refer only to companies licensed or chartered by the Dominion government.

Year of Many Disasters.

The year 1912 was prophesied to be a year of disasters, and there really was an appalling loss of life from various causes—notably at sea and on railways, drowning accidents, automobile accidents, etc.

(Continued on page 194).

HOW TO ADVERTISE BENEFITS OF LIFE INSURANCE

Collective Rather Than Individual Company Publicity Urged—Underwriters Should Reach More of the Non-insuring Public

BY J. K. MCMASTER.

Last year the twenty-six Canadian life insurance companies reporting to the Dominion Government spent $120,641 in advertising. Part of this amount was no doubt expended to good advantage, but it is safe to say that the portion of it applied to advertising in periodicals could have been expended in many instances in a better way than was done.

If the life company advertisements in the current issue of any of our insurance or financial journals be scanned it will be seen that they consist largely of statements as to the amount of business in force, the assets and the surplus of the company. Such advertisements in these papers are sometimes defended on the plea that they are intended to reach life insurance agents. But this defense is open to the criticism that life agents who are worth their salt are already well informed on these points, as to rival offices as well as their own, for they are dealing with this information constantly in the course of their daily canvass. The other possible defense of this style of advertisement is that it might perhaps impress the agent of some other company and influence him towards making a change in his connection. The probability of this taking place is somewhat remote, but it must be admitted that there is some justification for such advertisements in the insurance press.

J. K. McMaster.

We find, however, that in the daily papers the same style of advertisements prevail, though they are obviously intended there to reach and influence the insuring—or non-insuring—public.

Basic Principles of Life Insurance.

Now, the merest tyro in life insurance advertising knows that such appeals influence the public very little, if at all. Those outside the life insurance ranks have neither the knowledge to grasp, nor the interest to study their meaning. If proof were required of the ignorance of even those who feel to an extent the need of protection it would be amply furnished in the recent action of members of a well-known assessment society in seeking the aid of the courts to restrain their grand lodge from increasing the rate of assessments to a scale which even yet is inadequate. The proposed rates are below the Hunter rates for younger ages. The Hunter rates, by the way, make no allowance for management or other expenses or for loss on investments. They are net rates and should carry a percentage of loading for expenses.

Those members who are protesting, and some of whom are writing letters to the daily papers, are undoubtedly sincere, but they are woefully in the dark as to the basic principles of life insurance, and the necessity of paying a proper price if one is to get sterling value.

Those who have to do with correspondence with policyholders have reason to know that even intelligent business men have a very hazy conception of what a life company may fairly be expected to do by way of dividends, surrender values and privileges. Only a small percentage of them seem to have any idea of the value of the protection granted them continuously by their policies, and few of them, apparently, realize that this protection costs money, and must be paid for.

Only the other day the case was noted of a railway official with a salary of $10,000, who carried $7,000 of life insurance and considered it ample. It had not occurred to him until it was pointed out that he was expecting his family to live on the interest earnings of an amount considerably less than his yearly salary.

Deferred dividend estimates, now happily a thing of the past, did harm in that they sometimes led the insured to expect results which were utterly impossible of realization in any company. Having estimates of this sort in their possession, policyholders were dissatisfied even when the outcome was really creditable to the company, because it fell short of the original estimate.

The public need enlightenment on these and other points, but at present they have no reliable source of information. It would be too much to ask any individual company to assume the responsibility and cost of a campaign of education, but through co-operation it could easily be accomplished.

Benefits of a General Campaign.

Let the life companies unite in defraying the cost of an educational campaign in the periodicals of the country, exploiting no individual office, but telling about life insurance, what it is, what it has done, how it intervenes between the widow and her children and poverty, and how it makes the young man a better citizen through teaching him habits of thrift while enabling him to accumulate an estate.

The idea is not new. It has been advocated by the present writer and others for years, and its merits were well set forth by an essayist at the recent Dominion Life underwriters' convention, who estimated that a fund of $65,000, about half the amount spent by the companies in advertising last year, would provide for all the expenses in connection with advertising in the papers throughout the country for a whole year, using 150 lines twice a week in every daily and similar space in every issue of the weeklies.

If such a campaign of education were properly carried out it would be of incalculable value, not only to the life companies but to the citizens themselves, in showing them the one way in which a man may surely make provision for the loss to his dependants of his earning power.

◆

ABOUT THE INVOLUNTARY INCENDIARY

The involuntary incendiary is the man whom all of you know. You see him every day. You follow him and try where possible to prevent his deadly devastation of life and property. You trample on the half burned match he throws away; you extinguish his smoking cigar or cigarette stump; you douse his smouldering bonfire and campfire, you reverently (almost profanely) cover with metal his open gasoline and coal-oil can; you chink with mortar the cracks in his defective flues; you drench his smoking ash-heap, as its live coals are about to be fanned into flame. And all the while you denounce him as the fire fiend's fool accessory. This involuntary incendiary is the man whose acts are foolishly criminal, as those of the other kind are wickedly criminal.

The aiders and abettors of arson, are the men and women who inquire: "Was the property insured?" and they sink back with the benevolent ejaculation, "Thats good; the loss is fully covered." They are the ones who would penalize the insurance company instead of the originator of the fire. They would force the company to pay the loss whether just or unjust. They would place upon the statute books valued policy laws punishing the company for writing insurance instead of the man for burning his own property purposely or accidentally. They constitute the large-class of our citizenship who think that every semi-public corporation should be mulcted for the benefit of citizens, whether deserving or not. They are the first accessories always to the incendiary, no matter which class he represents. They are the ones who think that in matters of controversy between an insurance company and the insured, the company is always necessarily wrong and the insured right. They look with complacency upon disasters by fire. The only question they ask in all these cases is whether the property owner was indemnified by an insurance company.—Mr. W. Done, Insurance Commissioner of Utah.

◆

Most of the Canadian life insurance companies will issue policies with disability feature on payment of an extra premium.

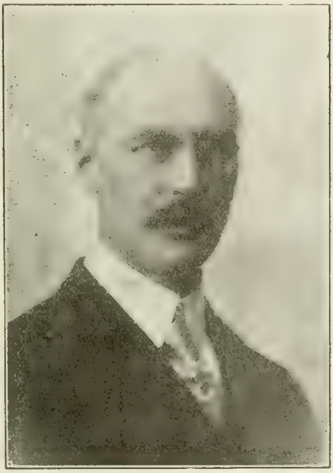
IMPROVEMENT IN FIRE PREVENTION

Difference in American and European Conditions—Responsibility of the Individual—How the Weather Affects Losses

By JOHN B. LAIDLAW

During 1912 there was marked progress in the movement toward fire prevention. This improvement was not merely in the extension of waterworks and the purchase of fire preventive appliances by municipalities, but there has been a growth among the public generally of the idea that fire prevention is largely a matter of individual care and effort.

At the annual convention of the Canadian Manufacturers' Association held a few months since, an address was given by Mr. Wentworth, secretary of the National Fire Protection Association, which has a large membership in Canada as well as in the United States. This address created so much interest in the minds of those who heard it that it was arranged that Mr. Wentworth should address the manufacturers at Montreal, Hamilton and Toronto, which he did during last month. In the city of Hamilton there was this year a special Fire Prevention Day, the occasion being utilized to have addresses delivered, and much interest was aroused.



JOHN B. LAIDLAW.

In the United States the effort towards fire prevention has received support from a number of sources and in several of the states a special day was proclaimed, entitled Fire Prevention Day.

Little Fires and Big Fires.

It is not long since it was almost impossible to arouse interest in fire prevention. The public either looked upon fires as an unavoidable misfortune or considered that the insurance companies alone were interested, but it is being generally recognized that fires are preventable and that the public are as much interested in fire prevention as the insurance companies.

At one time epidemics were thought to be unavoidable and were accepted with resignation and borne with fortitude, but science has shown that every sickness has a cause and that epidemics are only an unusually large number of individual sicknesses. It is very much the same with fires, but it is not yet so well recognized that every fire has a definite cause and that to keep down the big fires one must discover the causes of the little ones, and try to remove the cause, and second, to remove those conditions which tend to permit a little fire to develop into a big fire, such conditions being lack of cleanliness, poor construction of building, or dangerous arrangements of a well constructed building. A well constructed building open from top to bottom or without proper cut-offs between its sections, if divided into two or more, is but little better than a stove in which the contents would be consumed even if the building be not destroyed.

In Canada and the United States there are certain climatic conditions which will always induce fires, as compared with climatic conditions on the continent of Europe and in Great Britain. It is recognized that our weather is more extreme. We have hotter weather and colder, and it often is dry or cold for a much longer period than in Europe. Then our more severe weather requires that buildings be heated for a long period and the buildings consequently become much drier than similar structures in Europe or Great Britain.

Numerous Inferior Structures.

Speaking generally, the construction of our buildings is so much more inflammable, or if our new buildings are being well built there are still so many inferior structures surrounding the good ones that it will be a long time before the physical conditions of our cities becomes as safe as in Great Britain or on the continent where for a long period the scarcity of wood has induced the use of incombustible materials for interior partitions. Many of our so-called first-class buildings are really nothing but a mass of wood with a noncombustible outer wall of brick or stone. It is necessary because of these more dangerous conditions in our cities that our fire preventive appliances should be more efficient than those necessary to be maintained in Great Britain or in Europe where fires burn more slowly and where there are more obstacles in the way of the rapid spread of a fire when it breaks out.

During 1912 there was a marked improvement in the class of buildings erected in Canada for both warehouse and manufacturing purposes, in many cases such structures being entirely of incombustible material with floors, partitions, and even roof of cement, where previously it was thought sufficient if the outer wall were of brick or stone. Then, too, there has been a steady increase in the installation of special fire-fighting appliances and automatic sprinklers in the individual warehouses or factories, such improvements being tangible evidence of the steady growth of the idea that upon the individual lies the greater responsibility for fire prevention.

How Weather Affects Losses.

The losses tabulated by The Monetary Times respecting last year's fires are instructive as regards the effect of weather. Thus in January when the weather was unusually severe there were heavy losses, and June, which was the only dry month of the summer, also had heavy losses, but when the rains started again early in July the losses dropped to less than half of those of June, and the rains continuing in August the losses in that month were less than one-third of those of June. In October, the weather became fine and the fires blazed more fiercely.

It would be an excellent thing if the effect of the weather conditions were more generally recognized, as if so, during the dry spells the municipal fire brigades would be expected to exercise special vigilance, and care would be taken that all their apparatus was in first-class order. Some of the greatest conflagrations have been due to the fire brigade going on a holiday trip at a dry season and fires breaking out while they were away, and in some cases the authorities have undertaken alterations to waterworks systems which involved cutting off the water from the city at the most dangerous time.

Then, too, in the burning of rubbish it is the practice that this be burned at the driest and most dangerous season, when it should be burned in wet weather when there would be little danger of sparks igniting adjacent buildings.

Responsibility of the Individual.

Every year larger and higher buildings are erected and the international danger keeps increasing owing to the introduction of new and often dangerous methods of manufacture or high pressure methods of business. These increasing hazards can only be offset by greater care on the part of the individual to see that his premises are kept in good order, by the provision of such safety devices and fire appliances as he can himself conveniently procure, and by the constant improvement by the municipal authorities of the waterworks systems and fire-fighting apparatus.

"Eternal vigilance is the price of liberty," and constant vigilance is necessary if fires are to be prevented and the cost of insurance is not to be increased.

◆

Canada continues to be flooded with circulars from so-called surplus line brokers in New York and Chicago, who claim to have special facilities for placing insurance on hazardous risks. Numerous inducements are held out to the local agents by these men, but they should be avoided

PROBLEMS CONFRONTING LIFE OFFICES

Selection of Risks is Affected by Changing Conditions in Various Occupations—Who Should Pay the Higher Premiums?

BY L. K. FILE, B.A., F.I.A., F.A.S.

Each succeeding era of life assurance development has presented its own peculiar problems for solution, and history has shown that some solution has always been found though it must be admitted that oftentimes later experience has demonstrated the need for further consideration. One of the many interesting problems that to-day is demanding the careful study on the part of the companies is that of selection of risks. The rigid medical examination now required by all Canadian companies coupled with the close scrutiny of occupation and other important factors has proven conclusively the great diversity in the classes of risks carried. The risks vary from "borderline" cases where it is often difficult to decide whether the risk should be accepted or not, to those exhibiting the greatest prospects of longevity and a company must be fully alive to the many changes that are taking place in the conditions under which the various occupations are followed if it is to be in a position to equitably assess the risk.

L. K. File, B.A., F.I.A., F.A.S.

The problem may be put concretely in this way. A is a section foreman on a railroad, B is a dry goods clerk. Each applies for insurance and expects to get it at regular rates. The office believes, however, that section foreman as a class are subject to heavier mortality than the average insurant. The question then arises, should not the section foreman pay a higher premium than the dry goods clerk? In answer it may be said that strict equity would require that each and every class of risk should be charged premiums commensurate with the risks of that particular class, and this principle the companies are endeavoring to follow in a general way.

Principle Not to be Extreme.

The principle, however, must not be carried too far, otherwise one of the great objects of life assurance would be defeated. The greatest defect in the system of life assurance, as it stands to-day, is that it fails to protect the very people who have the greatest need for it. If then an equitable classification of all risks were attempted, it would unquestionably be found that many lives should pay a lower premium than the companies charged, while many others would be called upon to pay a heavier premium than is now required and still others would undoubtedly be found to be experiencing a rate of mortality so heavy as only to be insurable at prohibitive rates. In other words, an undue extension of the principle of the detailed classification of risks would exclude from the benefits of assurance many who under the law of general average now obtaining are able to secure protection. The aim of the companies should be rather to reach out and extend the field of their activities rather than to restrict them and in proportion as this is done will their economic value to the community be gauged.

Under a system of compulsory insurance, of course, no medical examination would be necessary, both the good and bad lives would be included and the general average of mortality maintained. Even when compulsory insurance is not in vogue some companies exist in Great Britain that dispense with medical examination. They surround themselves with other safeguards, however, such as deferring the period when insurance begins, granting double endowments only and other means, but as they have not followed this practice long enough to enable its results to be evident, its success or failure cannot as yet be determined. It might be pointed out in this connection that most companies that issue deferred life assurance on the lives of children do so without requiring medical examination of the child.

Broad Classification of Risks.

That the life companies on this continent are keenly alive to the desirability of a broad classification of risks is evidenced by the extensive investigation into the mortality amongst lives subject to various impairments and lives following occupations of varying hazard that is being conducted by the combined committee of the Medical and Actuarial Societies, the results of which will soon be made public. It should throw a great deal of light on many questions the consideration of which the lack of statistics has heretofore prevented. Embracing as it does the experience of the leading companies for the past twenty-four years, it affords a splendid basis for obtaining the desired information. Too much importance must not be attached to the results, however, for the rapidly changing conditions experienced in modern times may greatly affect any particular industry so that the nature of many occupations, hazardous or otherwise, may be greatly changed, sometimes for the better, sometimes not, although the general trend is undoubtedly in the direction of improved mortality.

◆

MISCELLANEOUS INSURANCE RESULTS AND OUTLOOK

(Continued from page 191).

The experience of the London and Lancashire Guarantee and Accident Company of Canada was satisfactory. The loss ratio on personal accident business was somewhat higher, but on the other lines this was equalized and the total result a little below normal.

On account of the keen competition and the additional companies entering the field, the amount of new business to be written is consequently limited, but notwithstanding this the progress was on the whole satisfactory.

A year of satisfactory progress is the record of the London Guarantee and Accident Company.

The Dominion of Canada Guarantee and Accident Company's premium income increased more than in any previous year, and was about $425,000 against $375,000 the previous year. Their claims, owing to more fatal cases, were a little heavier than in 1912.

Growth of Fidelity Insurance.

Every month of the year 1912 has shown a satisfactory increase over the year 1911, and the volume of business written last year by the United States Fidelity Guaranty Company was near $250,000, and the increase was not confined to any one locality, but is satisfactorily scattered throughout the whole of the Dominion.

The year's business of the Guarantee Company of North America, from its underwriting of fidelity risks, was reported to be of a satisfactory nature.

The American Surety Company in Canada during 1912, experienced one of the best years in the history of the company. A gratifying increase was shown in all departments, covering all classes of bonds executed by this company, particularly in the fidelity department. The net premium income exceeded that of 1911 by approximately 50%.

Its agency organization was extended, and its business operations in Canada are now conducted from the Atlantic to the Pacific.

As in other branches of insurance the prospects for 1913 are bright and opportunities increasing for the companies who transact personal accident, health, workmen's collective, fidelity guarantee, plate glass, third party, elevator, automobile collision, automobile third party and property damage, employers' liability and workmen's compensation, and other forms of miscellaneous business.

◆

At an inquest, held in London on the body of a three-year-old child, who was burned to death, the coroner said that a clause should be inserted in the Merchandise Marks Act in reference to the sale of flannelette, although the Government seemed to be too busy with controversial matters. About 600 children were burnt to death yearly in England and Wales. Flannelette was responsible for many fatalities, but the greatest danger was leaving young children in rooms with unprotected fires.

GROWTH OF GROUP INSURANCE

Recent Development as Applied to Life Underwriting —Some Legislative Restrictions

BY H. POLLMAN EVANS.

The system of life insurance, old as it is, as such modern institutions are reckoned, constantly renews its youth, and shows its perennial fertility of initiative by the introduction of new applications of its principles into fresh fields of activity. Scarcely a year passes but marks some well-defined advance, either in methods of administration resulting indirectly in benefits to policyholders, or in new and liberalized arrangements immediately affecting its beneficiaries.

Group insurance has not yet been sufficiently developed to admit of a universally accepted definition. But it may broadly be described as a plan whereby a fair number of persons of the same class or vocation, or united by some business or fraternal bond, which does not of itself furnish any selection of individual risks against the insuring company, have the opportunity to assure themselves against certain contingencies common to all. The application of the principle is well-known in the accident business, but as applied to life insurance it is a quite recent development, though not previously altogether unknown.

H. POLLMAN EVANS.

Some ten years ago the management of one of the then new companies was so far impressed with the possibilities of obtaining business in what might be called "wholesale" quantities that special life tables were prepared and an agreement entered into with a well-known accident insurance company to combine the two forms of insurance protection into one agency arrangement, and approach employers of labor, and certain of the smaller mutual benefit organizations with a view to embarking upon what was then believed to be an entirely new departure in the insurance system.

Should Command Success.

The press of work incident to the rapid growth of another branch of the company in question operated against the experiment receiving the constructive attention necessary for its development. There were other obstacles, also, which may be indirectly referred to later, which afforded greater difficulties to surmount than the circumstances of the time seemed to justify the effort necessary to do so. Viewed from this distance the results were better than might have been expected from the effort made, and were of undoubted promise, and had the company seen fit to concentrate its energies towards the development of the plan, Canada might have had the distinction of being one of the first countries in which, in a limited form, group insurance received serious attention.

Theoretically, what is known as group insurance should command success, but aside from those comparatively few cases where for some special purpose, the employer is prepared to pay all or a large part of the premiums, there are very real difficulties in the way of rapid and substantial success.

Putting aside for the moment any technical, business or actuarial considerations, we are confronted at the outset with the fundamental difficulty of getting bodies of persons of varying interests to act together for long periods in a common cause but with more or less diverse ends to serve. A satisfactory result is not impossible, but this is, of itself, a formidable obstacle in the way of rapid progress.

There are Legislative Restrictions.

It is possible, also, that the relations between capital and labor interpose a difficulty which only a fuller comprehension of the mutual benefits to be derived from group insurance is likely to overcome, and this clearer view may be expected to be of slow growth.

Perhaps the greatest single barrier, however, against the development of the plan in Canada is the legislative restriction which prevent the business of life insurance from being carried on in conjunction with any other form of insurance. It is not difficult to appreciate the reasons why life and fire insurance, for instance, should not be transacted by the same company, but it is not so easy to understand why a man should have to do business with from three to five different companies in order to secure the various forms of protection afforded by insurance of the person, which he may desire. Yet such is the case under Dominion legislation, and so far but little interest appears to be opposed against such a cumbrous and expensive way of effecting that which in many other countries is done by one operation through the medium of a single company.

That the public will before long awake to a realization of the unnecessary expense and trouble that is involved in such circumlocutionary methods can scarcely be doubted, in these days when in all branches of activity the cry of efficiency and conservation is changing the practice and the very basis of many other businesses.

A consideration of existing Dominion legislation is not, however, the purpose of these observations other than it may be necessary to refer to it as an effective barrier in the way of the public obtaining sound insurance of the person in its various forms at a substantially lower cost than it can now be secured.

It would be difficult to estimate the possibilities of development of such a plan under favorable legislation, and other conditions, but that it is capable of substantial reduction of insurance cost to the public can scarcely be questioned by any thoughtful person.

Requirements of Wage Earners.

To those in touch with the insurance wants of the wage earners it is but too well-known that no present system of insurance adequately supplies their requirement. A demand not always clearly expressed, but ever present and felt by those in a position to know, exists for a form of insurance protection that will provide in one contract against all or most of the contingencies that vitally affect the existence and welfare of those who from the nature of their vocations are not themselves in a position to make provision against.

Insurance on the group plan against the contingencies that press most heavily on the wage earning population properly safeguarded as to limitation of benefits, and with workable facilities for transfer from class to class, from vocation to vocation, and from place to place, would mark a more important advance that has been made in respect to insurance of the person in the past twenty-five years. Such a system would have a modifying influence upon the relations of capital and labor, and within two or three decades would show the most significant effects upon the sociological life of the industrial element of our people.

An intimate acquaintance with industrial conditions discloses the disastrous social results that so often follow the death of the bread-winner, a period of prolonged illness, or of unemployment from any cause.

Flexibility of the Contract.

A broad system of group insurance on a purely commercial basis is capable of yielding a result in benefits to the people, that are likely to far outweigh the rigid and arbitrary benefits often not desired and entirely unsuited to at least one-half of the people, which are offered by nearly all systems of state insurance now in operation.

The perfect flexibility of contract which could be purchased through commercially conducted group insurance is an outstanding advantage that is not likely to be offered by any national insurance plan. If the companies were permitted to undertake contracts for the insurance of the person other than, and in addition to contracts of life insurance, a substantial reduction in the cost of all such insurance could be made, and a number of other advantages accrue to the insured, not the least of which would be, it is believed, a large reduction in the lapse ratio.

It is doubtful if any other field of insurance effort affords to-day more substantial opportunities to those interested in sociological problems and the advantages to be derived would abundantly justify any well-considered legislation which would relieve the policyholder from the necessity and expense of dealing with several agents and supporting the organization of several companies to perform functions for the insured that one agent and one company could perform, not only at less cost, but more satisfactorily.

FIRE RISKS IN A NEW COUNTRY

Beginnings of Insurance in British Columbia—Mainland Fire Underwriters' Association

BY HENRY LYE.

The general idea of fire insurance is that of a monotonously routine operation plodding on in steady grooves as uninteresting as the multiplication table; but if you will glance at its history in British Columbia and contemplate its career in an absolutely new and unique country in the process of development under circumstances unparalleled in the world's experience, you will find the subject full of interest.

Here you will find a country, the majority of whose incomers have naturally been adventurers, following pursuits which unsettle men's minds, and inevitably increase the "wanderlust;" a country in which nearly every pursuit has been an experiment, and the outcome a lottery; a land of magnificent distances, of rugged mountains, of turbulant rivers, of rich-soiled valleys, of immense timber trees, of golden sands, minerals of every variety, with never failing coal fields; a country flanked by seas teeming with fish, whose coming is uncertain as to time, and whose abundance varies from year to year, indeed almost from day to day, so that the preparations for their harvest may be so insufficient or so excessive as to be disappointing.

Supplemented by Importations.

A province whose productions must of necessity seek distant markets, whilst its home-supply of food must for many years be supplemented by importations; whose timber trees are so immense that unique appliances are required for their felling, logging and sawing; whose minerals are generally in places almost inaccessible and when mined have to be transported over mountainous trails, across ravines and rocky streams until their richness and abundance justifies the building of railways; where the prospector and the timber cruiser and the hunter wander over trackless areas; carrying their packs of blankets and food on their backs; where a city may grow in a month and be abandoned in a week, where isolation, hardship and uncertainty produce recklessness and evanescent prodigality, where you may meet Indians, Chinese, Japanese, Italians, Jews, Turks, Greeks, Kanakas, Doukhobors, Hindoos, and indeed people from every clime, many of them hoping for immediate acquisition of wealth in order that they may return to their own countries, so that but a small proportion of the immigrants have come with the intention of being permanent settlers and loyal citizens.

Fire Insurance is not a Routine Pursuit.

From the very first, the protection of fire insurance has been given, without which neither trade nor commerce, nor manufactures, nor any other enterprise is practicable; then let the advocates of classification learn that every enterprise has constantly and continuously changed its machinery, appliances and methods, so that rates of premiums have had to be assessed under circumstances for which experiences in other lands and in other times have furnished no guidance, and yet that no fire insurance company has met with great disaster and no honest claim has been repudiated or left unpaid, however distant the scene of the fire, or how scanty the data on which adjustments have had to be made, and then you will begin to comprehend the romance of fire insurance in a country without regularity of beginning or of progress, in which every outlook has been kaleidoscopic, and yet has had to be carefully studied in order that reasonable justice might be done in respect to both premiums and claims.

Annual Legislative Enactments.

In addition to these are the every-day changes in municipal by-laws as well as the annual crop of legislative enactments, many of which change and add to the risks on which premiums have to be computed; again add the perishable and inflammable character of the materials of which most of the buildings are composed, with the spasmodic changes in the wages of mechanics and in the cost of materials, all of which unsettle values, and you may begin to think that fire insurance is not a routine pursuit, but all its deviousness must be closely studied, all its variations of circumstance must be sensibly and justly considered to prevent its degeneration into absolute gambling. Surely then the men who have had the oversight and management of the operations of fire insurance in British Columbia are worthy of all honor and commendation, and their experiences have been as full of novelty and interest as any romance which has ever been written.

Men Who Secured Business.

But romance in connection with fire insurance is not a new thing; about fifty years ago Mr. J. B. Bennett was the western general agent of the Ætna, with an office in Cincinnati, his staff in office and field of over a hundred men, were acknowledged to be the most efficient fire insurance force on the continent, under a chief whose ability and success were the envy of all his competitors. Amongst those who graduated from his office were Wm. Churchill, who was one of "The Innocents Abroad," celebrated by Mark Twain, he afterwards became the commissioner of insurance for the State of Ohio; Mr. H. J. Reinmund also filled that post in the same state. Mr. C. C. Hine established the Insurance Monitor and published "The Letters of a Patriarch;" Mr. Stoddart organized the New York Underwriters' Agency; Mr. J. J. Berne and many others afterwards filled important positions in other companies. As accountant with one assistant I had over three thousand open accounts, yet, on the first morning of every month rendered a complete statement of the business of my department, with a trial balance of the ledger.

The semi-centennial of the Ætna was the occasion of the receipt by the principal officers of a supply of Golden Catawba Wine from the vineyards of Mr. Nicholas Longworth.

Mr. Bennett published the first analytical digest of rates on special hazards, then known as "Bennett's Bible;" Colonel Dueat published Dueat's Practice of Fire Underwriting; these two were the foundation of the systems of schedule writing on this continent.

I remember the first application for fire insurance on the general stock of a wholesale merchant in Idaho, which was contained in a dug-out covered with sods, and the first attempt to make rate on a coal breaker in Pennsylvania.

Signs of Insurance.

During Mr. Bennett's incumbency (he was always spoken of as "The General"), the Ætna had the lead of all the fire insurance companies in the western states; at that time Chicago was of little importance, Kansas was known as "Bleeding Kansas," the Civil War was raging in the South, Nebraska was recognized by the lightning shattered telegraph poles; the further west was the great American Desert, in which the traveller encountered hostile Indians and Mormon Daintes as well as immense hordes of Buffaloes. If, on his way eastward, he was so fortunate as to escape the perils of the desert, his first assurance of safety was the sight of an Ætna agency sign, a token of the enterprise of the company, which was always foremost in the westward march of civilization.

At that time all the agencies were supplied with lacquered signs bearing the name of the company represented, one of these signs was tacked on every building wherever it or its contents were covered by the companies' policies.

One Hundred Companies Have Licenses.

Returning, however, to British Columbia, we now find about one hundred of the strongest and best managed fire insurance companies have taken out licenses to transact business in the province.

The Mainland Fire Underwriters' Association has been in operation for about twenty years; the first manager was Mr. G. W. Hobson, who was succeeded by Mr. C. R. Gilbert, and he again by Mr. A. W. Ross, the present incumbent; the present premium income is about two millions of dollars per annum, although rates have been reduced from time to time and concessions have always been made whenever improvements have been made in construction, arrangement, appliances and fire protection, so that now there is mutual satisfaction in assured and insurers, and most of the banks have been induced to open branches in all parts of the province in full reliance on that protection without which trade and commerce is practically impossible.

* * *

New Zealand has tried the experiment of State fire insurance. There the undertaking was turned over to a special State Department. The first act of those in charge of the scheme was to arrange reinsurance treaties with underwriters at Lloyds, London, which, as an Australian writer puts it, was a confession that even with the revenue and credit of New Zealand behind the department, they were conscious that they could not transgress the economic laws upon which insurance is based.

Preventable fires in factories start from a lack of cleanliness, oily rags hidden behind steam pipes; from smoking, lighted cigars tossed in the corner of a varnish room; matches dropped carelessly where they will be ignited accidentally. Lighting equipment, such as paper shades on electric lights; inflammable material, fired by overheated pipes, chimneys and electric wires; and explosives, similar to gasoline and used near a flame; these form another group of typical ways in which fires are started. Many other fires are caused by gases due to leaks and improper piping; by oils, dripping from leaky bearings in material of inflammable character; holiday causes, due to the lack of cleanliness and inspection at such periods of idleness; and by carelessness, and the utter disregard of fire rules and regulations.

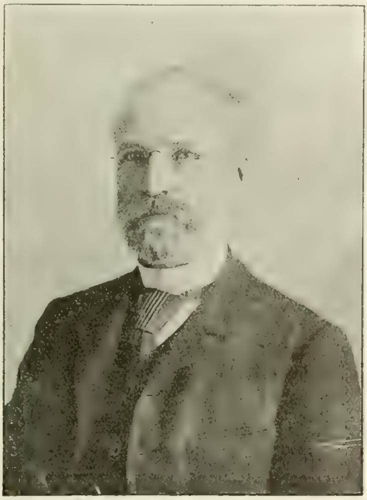
SOME LIFE INSURANCE QUESTIONS

Answered by an Expert—Reasons for Difference in Premium Rates—Notes on the Endowment Plan—Can Life Insurance Companies Fail?

[The following contribution, from the pen of a gentleman of nearly half a century's experience in life insurance work, recalls a few of the more frequently occurring questions which all insurance managers and agents meet from time to time. Mr. Orr will submit further questions and answers in subsequent issues of *The Monetary Times*, and will be glad to consider any queries our readers care to ask.—Editor *Monetary Times*.]

QUESTION NO. 1.—Why do life insurance companies send out agents to reason with people about insuring their lives? Why not put up their signs as is done in other kinds of business and attend to customers as they call in?

ANSWER.—This seems a much out-of-date question. It is more often thought, however, than expressed in words. But a second thought easily furnishes the answer, viz., that very little business, except in the more common, and pressing, and local needs of the people, is now done in that fashion; and, even then, mostly by display of the goods, and attention and solicitation on the part of clerks. And also, that all other business of a wholesale and progressive sort, is carried on by means of commercial travelers threading the whole country, with their wagon-loads of trunks, exhibiting the newest and best articles in all lines, very much to the convenience and benefit of the purchaser, and to the promotion of trade, international and otherwise.



WILLIAM H. ORR.

QUESTION NO. 2.—Why do not life insurance companies depend more largely upon newspaper, and magazine, and bill-board advertising, and less upon agents?

ANSWER.—Because extensive advertising has been tried, many times over, and though beneficial, has not been found sufficiently economical and remunerative. A great many people would refuse to patronize any company which made a public exhibition of extravagance on any line. The business is one which must be conducted with the greatest of economy. And it is found, from long experience, that the quiet dropping in of a well-posted canvasser upon a busy man, is the best way to attract his attention to a subject somewhat akin to making his will. The busy man does not then have to lose valuable time in repeatedly visiting a company's office. He can avail himself of the agent's convenient suggestions on the spot, as to how to get a policy with the least possible trouble, and as to the kind best suited to his case, be it a whole life, or a long or short endowment, or a yearly income on attaining a certain age, &c. The mere fact that all companies, large and small, depend for their growth almost entirely upon the employment of agents is quite conclusive as to this method having "won out," as the expression is.

QUESTION NO. 3.—There are so many companies soliciting me to sign an application, how am I to decide which one to patronize?

ANSWER.—The best means open to the busy business man is to give his preference to a well-known, well-established company. Suppose you were thinking of buying a farm. You would not be surprised to find that one which had long since been cleared of trees, stones and and stumps, and was well drained and fenced, and built upon, would be a more satisfactory purchase, at the same price, than one which had only been partially cleared up or improved. The young company will, of course, make the plea that its non-participating rates are as low as, or lower than, those which the older company offers, and that as to the with-profits plan it is making a better record of economy and success than certain older companies did at the same age. Nevertheless, the farm illustration meets the case. It is up to the owner of the unimproved property to show that his farm is nearer the market, or has other attractions to somewhat counterbalance the fact that the heavy expense of clearing and improving the older farm does not have to be done over again.

QUESTION NO. 4.—It has been claimed that regular life insurance companies cannot fail, because they all have to accumulate a certain fixed legal reserve, under inspection, and with an annual report to the Superintendent of Insurance. Is there any truth in that claim?

ANSWER.—None whatever. Many scores of failures in Great Britain, Canada and the United States testify to the contrary. It is true that these were, almost exclusively, young companies. It is an exceedingly rare occurrence that any company which has attained to fifteen or twenty years of life, is found going astray thereafter. The legal reserve requirement, and the inspection, and the report to the superintendent or state commissioner, are certainly great safeguards. These, in many cases of failure, throw the principal loss upon the stockholders of the mismanaged company, if there are any, and preserve some sort of poor return to the policyholders out of the wreck—such, for instance, as having their policies transferred to another company, perhaps only a trifle more stable, or perhaps the other way. There is no use in anybody pretending that when a company fails in business the policyholders are not going to lose by it. No such case is on record.

QUESTION NO. 5.—Is it better to insure one's life on the all-life, or on the endowment plan, supposing about one hundred dollars a year could be spared for the purpose?

ANSWER.—On the face of it, the latter decidedly. In the case of a young man of 25 years, a life policy for $5,000 can be had for a trifle over $100 a year, and so can an endowment for $4,000, payable at death or age 60. In both cases the profits can be applied annually to a reduction of the premiums. Unless in case of an early death, the $4,000 will yield very much better satisfaction than to contemplate having to pay premiums all the way up to perhaps 90 or 95 years of age, after the parties intended to have been benefited by the $5,000 are either all dead or in easy circumstances, and the fatherly provision, therefore, no longer needed. Endowment policies are kept in force for a longer time, in proportion, than life policies, on account of the probability which the holder flatters himself with, that he will live to receive the money himself, and benefit by it in his old age. Some companies, therefore, now seldom issue an all-life policy, but at about the same premium write them payable at age 80 or 85.

QUESTION NO. 6.—Is it better to take insurance on the with-profit, or the without-profit system?

ANSWER.—The former is almost certain to prove the more satisfactory as the years go by. If a man desires protection only for ten or fifteen years, the without-profits policy is not particularly objectionable. But, for a life-long stay or on a long endowment, whether he be of age 20, 40 or 60 at entry, he should pay the trifling extra first year premium, and have his profits applied to reduction of all future annual premiums. There is much satisfaction in having an annual notice of profits earned on your money, instead of the stockholders having a rake-off from your premiums. My own experience is that on a certain policy the sum of the 45 years' premiums, had the non-profit plan been taken, would have been $7,848, whereas with the annual profits deducted, the actual cost has been $5,851.08—a saving of $1,993.02, or about twenty-five per cent. Instead of $107.68—the without-profit rate of fifty years ago—the reduced premium this year is only $123.20, a nice reduction from last year's $130.08. This is a decided contrast to what is troubling the Ancient Order of United Workmen, and all such societies, at the present time.

QUESTION NO. 7.—Why do the premium rates of the different companies differ from one another? Has not life insurance been practised long years enough to determine the proper rate for an all-life policy, especially on the level premium system?

ANSWER.—To the latter question, yes, approximately; and as to the former, no company cares to be a mere replica of another in the good things it puts inside of its policy, in the shape of, say, cash return values, or loaning privileges, or a paid-up policy in event of lapse, or allowing the amount due the widow to be largely increased if drawn in convenient instalments as needed, &c., &c. The difference in the rates, however, is usually only a matter of a few cents. Other things equal, the higher the rate the better the security. An unusually low rate points to danger ahead, unless the company has already attained to indisputable strength.

QUESTION NO. 8—Why is there, on the part of some companies, so much delay in settlement, after death, when another company pays in half the time?

ANSWER.—This arises usually from the different way in which the insured had his policy written originally, or from his having assigned the one policy and not the other. For instance, one policy may have been written payable to his wife, and another to his estate. The first can be settled in a week, but the other has to await what is called a probate of the party's will, or the issue of letters of administration upon his estate from the Surrogate Court. The company must know who is legally entitled to collect the money. And again, in the case of an old policy, there may have been several assignments of it, and these, complicated by the death of some of the parties, perhaps in a foreign land, their heirs having to be discovered, in order to obtain a release. Some people foolishly accuse companies of deliberately delaying payment so as to have a longer use of the money. All companies, on the contrary, use their very best endeavors to hasten delivery of the cheque, it being in their interest so to do.

QUESTION NO. 9.—When an insured party disappears, and nothing more is heard from him, how soon thereafter can the policy be collected by the deserted wife or widow?

ANSWER.—That is a most difficult situation for company or claimant to be placed in. The company is ready to pay promptly on "proof of death." But the deserted wife is unable to furnish this. Therefore, she generally continues to pay the premium, hoping against hope that the missing party will turn up. If she decides to drop the policy, the company will pay her what is called the legal surrender value as being a lapsed policy. But she is sometimes advised by a foolish lawyer to sue the company, in the hope that some judge will take her view, that Mr. Smith must be dead or he would have been heard from within the past seven years. On the very day that a certain seven year old desertion case for $7,500 was being tried in court at London, Ont., and nonsuited for want of any "proof of death," a letter came to hand from the Pacific Coast indicating that another woman's husband was there, fully alive, who with a five year old son, had deserted his wife from a village near London, more than twenty years previously, and though that wife advertised extensively, no word of his fate had reached her in all that dreary twenty years! He had finished payments on a ten-pay life policy before getting drowned (or whatever other way he was supposed to have left this world), and the company had regularly sent her a cheque for the yearly profits. A few days later, a Kingston widow sued the Ancient Order of United Workmen, after paying monthly calls for seven long extra years, and the Toronto judge gave her the money. And not only so, but told her lawyer that upon such good circumstantial evidence of the husband having been drowned in a terrific storm, almost any judge would have given her the money if suit had been brought immediately after the accident. In another not very clear Toronto case, where the money was paid into court on the supposition of death, the man subsequently turned up alive, and wanted the court to hand the money over to him instead of returning it to the company. These freak cases are very rare, but have to be dealt with according to the circumstances of each. Sometimes the company pays the full sum to the supposed widow upon being furnished with a bond guaranteeing the return of the money, with interest, should it be found that death had not occurred at the time supposed.

QUESTION NO. 10.—Why do companies insist upon so many affidavits relating to a man's death before handing the widow her cheque?

ANSWER.—"Where the carcass is, there the eagles are gathered together." Many skilful, dastardly attempts have been made to capture $10,000 or $20,000 from companies by burying the coffins of people who have disappeared after a pretended short illness and death. Hence it has not hitherto been deemed safe to depend upon less than affidavits from the doctor, the undertaker, the clergyman and the widow. But quite recently some companies have decided that where they have a reliable agent who knows the parties, his certificate, with that of the doctor and the widow will generally prove acceptable.

QUESTION NO. 11.—Why is it not sufficient to prove that the insured is dead, instead of desiring to know what he died of, how long sick, and other things?

ANSWER.—Because the medical departments of all companies keep a record and make a yearly report, in tabular form, for future guidance in the acceptance of risks in certain cities, states and provinces. It is of great importance to know what percentage of the total deaths occur within five or ten years after the date of the policy, and from what cause. An American mutual company was, at one time, doing a very large business in a city noted for its production and consumption of beer. Its agents and its medical examiners in that city were obsessed with the absurd idea that beer was "the poor man's liquid beef." Very few deaths above the average occurred the first five years in that city from any cause. But after that period the mortality from diseases of the liver and kidneys became alarming, indicating the need of a radical change, or comparative ruin. The needful steps were taken to obtain a less consumption of poison in small doses, on the part of the persons admitted to membership thereafter, not only in that city but wherever that company's operations have extended. Bright's disease, heart disease and apoplexy seem to be the three chief causes of death, with pneumonia, cancer and consumption holding the next place, in companies having a considerable membership. In the Ancient Order of United Workmen, apoplexy, heart disease and cancer appear to be the three most numerous causes.

VALUE OF TITLE INSURANCE

BY JOHN J. GIBSON.

The insurance of titles to real estate is a business of comparatively recent introduction into Canada, the first title insurance company in the country having been established only five years ago. The title insurance companies in the cities of the United States, however, are numerous and long established. In the larger cities, a company's guarantee of title is procured by the purchaser in connection with practically every transfer of real estate. The demand for insurance of this kind is based on several conditions, chiefly the following:—A solicitor or attorney is not usually financially able to carry the responsibility for titles to exceedingly valuable city property; and property owners, therefore, feel the desirability of having a guarantee of a strong company with ample resources. Secondly, the system of registration of title deeds is not very good in many of the States and a title cannot be satisfactorily investigated without reference to the records of a title insurance company, which are much better arranged and indexed.

Conditions are somewhat different in Ontario. Here the system of indexing and abstracting registrations in the county registry office is much better than in most of the States so that any solicitor can make as thorough a search of a title as can be desired, from the records in the county registry office. But the other considerations in favor of title insurance obtains in Ontario quite as strongly as in the United States. The most careful and competent search may fail to reveal an imperfection of title that may later develop. Very often, too, it is more or less a matter of opinion whether a certain condition of title constitutes a defect or not, so that what one solicitor might reasonably consider a good title, another might, not without reason, consider an imperfect title. It would seem, therefore, only an ordinary business precaution to have one's title to real estate insured, especially where the property represents a large sum of money.

The title insurance company does not undertake to search or investigate the title by its own officers. Its function is only to assume the risk of loss through defect in title; and just as a life insurance company acts upon the report of a doctor in deciding whether or not to accept a risk, the title insurance company acts upon the report of any competent, reputable solicitor in deciding whether to insure or not to insure any given title.

In New Ontario, and in some parts of older Ontario, as also in the western provinces, there is a system of title registration and government guarantee of titles, popularly known as "The Torrens System," that makes insurance by a company, or any other guarantee of title, quite unnecessary. A government officer inspects every instrument presented for registration and will not accept it unless it is in perfect order. He will then issue to the grantee an indefeasible certificate of title. The introduction of this system in the newer parts of Canada is a recognition of the necessity of having a security of title; and in the older provinces where the system does not prevail and where it could not now be introduced except with great difficulty, the insurance of titles by a title insurance company provides an excellent substitute.

BETTER BUILDING CONSTRUCTION NEEDED

Faulty and Fireproofless Work is a Serious Factor in Annual Fire Waste—A Matter for Legislation

BY A. LINDBACK.

The bulk of the fire losses in Manitoba last year occurred during the first six months, most of which, as usual, were preventable. What applies to Manitoba is equally applicable to the rest of the country—with the increase of population, created values and wealth, our fire losses are seemingly keeping pace. We increase the expenditures for water supply and equipment indifferent to the fact that, if a good portion of such money and effort were invested to promote fire prevention by educating the people, old and young, to practice common sense, care, cleanliness and order, fire losses would be reduced.

As long as we fail to break away from the old building methods of frame houses, shingle roofs, indifferently built chimneys, careless accumulation of rubbish everywhere, so long shall we have our regular, heavy and disastrous fires.

Any building constructed of concrete, brick or stone, with incombustible roofing, may be considered fire-resisting, but, as is the case in average construction, if the interior trim is wood, and it is filled with open elevator wells, stairways and unprotected windows, it is a misnomer to call it fireproof and a crime to advertise it as such. The law does not compel fireproof construction; but the law should require that every building be conspicuously labelled and advertised according to that specific structure's safety. Not only should this be made compulsory but everywhere there is need of more competent inspections, not only of buildings, but of conditions within and without.

A. LINDBACK.

In view of the lessons conveyed through the yearly increasing fire losses, it is incomprehensible that communities throughout this country remain indifferent to the building of acres of the most inflammable structures, which some day are bound to become a scourge in the form of conflagrations and losses. When a man builds a house in the country, he may have a right to jeopardize his own life and property and that of his family, and gamble with the insurance companies, but there can hardly be any question that the owner of property in a city or town has no right to erect a structure which becomes a menace to the safety of the property of the adjacent owner. If the eighteen or twenty millions we destroy by fire throughout the Dominion yearly could be applied for improving building construction, the annual losses by fire would soon begin to decrease. Is it not the duty of legislators to consider this?

◆

If ordinary profit-making concerns dealing with a few thousand people only can afford time for improving living conditions coming within their immediate influence, how much better can time be afforded for such work by an institution having a clientage of over twenty-five million people. Life insurance has made wonderful response to the demand of modern times, and in so doing has reached into nearly every home in this country thereby becoming a powerful factor for human good or ill. Nothing less than a recognition of this fact and action appropriate to the responsibility it imposes will satisfy the public mind.—Robert Lynn Cox, New York.

SURETY INSURANCE IN CANADA

Government Requirements Are Said to Be Too Rigid and Taxes Too High—Canadian Business is Small

BY A CANADIAN SURETY UNDERWRITER.

The first thing that attracts the attention is the fact that the thirteen companies writing surety insurance in Canada wrote approximately $445,000 in premiums during the calendar year 1912. Over one-quarter of this amount was written by a certain United States surety company, and over 40 per cent. of the total amount was written by other five companies from the United States.

In 1912 the surety premiums in the United States amounted to nearly $18,000,000. The reason for this is not alone the larger population in the United States, but it shows more clearly that Canada is behindhand proportionately in the development of this class of insurance. The reasons are well known. The requirements are too rigid and the taxes are too high, particularly in the province of Quebec and in the maritime provinces. In Quebec, the taxes are 10 per cent. per annum, with a minimum of $250 for each company, notwithstanding the fact that all the companies together do not write $25,000 in premiums in that province.

Special License Taxes.

Besides these taxes, there are also special license or occupation taxes, ranging from $100 in Montreal and $75 in the city of Quebec to other amounts ridiculously disproportionate to the volume of business ever obtainable in the smaller municipalities. Then there is also in Quebec a special deposit requirement of $50,000 before such companies may write court business in that province, irrespective of the fact that all such companies have a Dominion license and are authorized to write all classes of business without such restriction in every province west of Quebec.

To make the matter more unjust, if possible, this deposit requirement was only $20,000 originally, and several companies were admitted on this basis, and later the deposit was raised to $50,000. This applied only to new companies seeking admission thereby providing a distinct monopoly for the companies that entered under the old requirement of $20,000 deposit.

Another Great Hindrance.

Another great hindrance to the development of surety business in Canada is the fact that the Dominion Government and other obligees require marked cheques with tenders, thus making it impossible for bidders to file surety company bonds, and this applies to contract when finally awarded, thereby rendering it almost impossible for many competent and experienced men to bid on this class of work. This is distinctly undemocratic and not worthy of a Government as liberal as ours is supposed to be.

Most of these provisions and restrictions are directed against the United States surety companies, aud thus they are prevented from writing bonds in favor of the Dominion Government in any of its forms, notwithstanding the fact that the Government licenses them to transact such business within the Dominion.

Acceptance of Corporate Suretyship.

Considering the fact that these United States surety companies write many classes of surety business not undertaken, and not even understood by the Canadian and British companies, it seems that we are standing in the way of our own progress by continuing these restrictions against such companies. It seems strange when there is no logical or sensible reason for personal surety, that the Dominion of Canada should be so backward in its acceptance of corporate suretyship. In the United States there is a characteristic aphorism that the intelligence of a community may be judged by the amount of its surety bond premiums, and it seems to us that no matter how brusque this statement may sound, it is nevertheless largely true.

◆

CONFERENCE ON FARM RISKS

Representatives of the companies writing farm business in the Western States met at Chicago for the purpose of discussing various improvements and changes needed for the conduct of the business. It was pointed out that the farm losses last year were larger than usual, despite the fact that prosperity among farmers was general. The introduction of modern improvements on the farms, such as gasoline engines and electricity, it was shown, was responsible for the increase. The meeting was well attended, and many important subjects as relate to the farm business were thoroughly entered into. As the result, those concerned with this particular line feel that a better understanding of conditions exists, and that they will be in a better position to handle the farm business in the future.

HOW TO GUARD AGAINST DEFALCATIONS

Benefits of Fidelity Guarantee Insurance—One Hundred and Fifty Million Dollars Liability on Books of Companies Last Year

BY E. WILLANS.

If appointed to a position of responsibility one will be asked to furnish a bond for the faithful performance of duties. Instead of requesting a friend to go on a bond, application will be made to a guarantee company, and if moral credit has been kept good, the company will, for a small premium, guarantee fidelity.

To the employee this modern method of furnishing security for his honesty is a relief from the unpleasant method of asking friends to become his surety, and an equal relief to his friends to be freed from the obligations of a bondsman. It is well known that a large percentage of bonds signed by private individuals have, owing to changed financial or other conditions of the bondsmen become valueless by the time the necessity for realizing on them has taken place, so that to the employer the guarantee company offers security which it is impossible for him to obtain from a personal surety.

Insurance Act Extended Business.

During the year 1911 thirteen guarantee companies carried on the business in Canada, the amount of bonds guaranteed by them in that year being over $122,000,000, with premiums thereon amounting to over $444,000. The extent to which the business has increased in public favor may be seen in the fact that the bonds issued and premiums received increased more than 100 per cent. during the previous five years.

The new insurance act of 1910 not only extended the classes of bond which could be issued by a guarantee company, but also increased the number of classes of insurance which could be carried on by a casualty company. The force of this legislation, so far as guarantee insurance is concerned, was much felt during 1912. Whereas only thirteen companies were writing this class of insurance in 1911, there were eighteen companies operating last year under Dominion License besides a few provincial companies in the West. So many new companies engaged in what is after all a rather limited field of insurance naturally led to a year of keener competition.

Forms of Bonds Issued.

The activity of the companies in meeting the needs of business requirements has led to the extension in the forms of bond issued, so that almost every conceivable form can now be secured through a guarantee company. The various nature of these forms may be seen by enumeration of the following partial list:—

Fidelity bonds for banks, financial institutions and general commercial houses.
Government and municipal officers.
Administrators, guardian, executors, succession duties, liquidators and assignees bonds.
Customs and excise bonds.
Lost securities.
Security for costs.
Contractor's bonds.

To enumerate the amount paid out in claims, does not by any means indicate the extent of the benefits of guarantee insurance; neither do the net losses paid to any degree represent the total defalcations which occur among those bonded. In estimating the service rendered by guarantee companies, in addition to the losses paid, there must be considered the constant investigation and supervision of those under bond; in directing of more up-to-date systems of checking and auditing to prevent fraud; the weeding out of undesirables; the deterrent effect on employees who know they have a fidelity company to reckon with should they become unfaithful to their trust.

Bringing Dishonesty to Justice.

The extent of the service rendered to the community by the companies in pursuing defaulters fleeing from justice is probably not realized, for the reason that in very few cases does the name of the guarantee company appear in connection with them. It is a fact, however, that large sums are expended yearly in this way, resulting in the capture and punishment of many dishonest employees who would otherwise go unpunished.

In taking care of a liability of probably not less than $150,000,000 of bonds during 1912, it may safely be said the guarantee companies have rendered to employees, employers, and the community a distinctly beneficial service. There is still necessity for employers demanding bonds from trusted employees and a more general adoption of corporate suretyship.

MARINE INSURANCE ON MONTREAL'S DRY DOCK

Rates Fluctuated With Weather Prospects—Insuring the Strength of Tow Ropes

The big dry dock which was installed at Montreal last year, after a voyage across the Atlantic, was an interesting marine insurance risk. The rather unexpected announcement was made that the dock, the Duke of Connaught, built by Messrs. Vickers, had left Barrow on August 31st for Montreal. Under the terms of the contract it had been agreed that the dock should leave England before September 1st, in order that the voyage across the Atlantic might be over before bad autumnal weather sets in, and this warranty, as it happens, was absolutely kept. But when a gale was blowing on the Friday the underwriters were asked whether, though everything was ready for the voyage, they had any objection to giving the dock a few days' grace, and this concession was willingly granted. The concession, however, was not needed after all, for the gale dropped, and the dock was able to leave on the last day of August.

Work of Two Tugs.

The dock was in tow of two of the most powerful tugs in the world—the "Zwarte Zee" and "Roode Zee"—and however much underwriters might like to see such important work in the hands of a British company, it is only fair to say that the name of the Dutch firm of Smit and Company, of Rotterdam, the owners of these tugs, inspires a good deal of confidence. It was these two tugs which safely towed out to Rio de Janeiro in 1910 a slightly smaller dock. The "Roode Zee," in company with the "Oceaan," took out a dock to Callao in 1908 and the "Roode Zee" also successfully hauled out to Montreal in 1909 a grain elevator built at Barrow.

Insurance on the Dock.

Insurances on the dock were placed nearly two years ago and amounted to about £200,000, which compares with £250,000 placed on the British Admiralty dock recently towed round from Birkenhead to Portsmouth by British tugs. The lifting capacity of the Montreal Dock is 25,000 tons, as compared with the capacity of the Portsmouth Dock of 32,000 tons. Originally the building and towage risks were placed for a total premium of 5 guineas per cent., but when the weather prospects looked bad as much as 12 guineas per cent. was being quoted to cover the dock against all risks on the voyage and 10 guineas per cent. to include only the risk of total loss. Later, this risk was easier at 8 guineas per cent. That is the premium for which, in a picturesque phrase, underwriters insure the strength of the tow ropes. The high level of the rate as compared with that originally quoted to cover so much more must be set down largely to the more cautious feeling which set in in the marine insurance market after the shock caused by the loss of the "Titanic."

The day of very large lines has for the moment passed, says the London Times, and high rates have now to be offered if underwriters are to be induced to accept rather bigger lines than they feel altogether happy in retaining. Moreover, throughout last year floating docks were in many directions, so that those who cared for such risks had plenty of opportunities of writing them.

◆

STRAIN OF MODERN LIFE

The strain of modern life is the cause of the great increase in diseases of the heart and the blood vessels among persons just past middle age. A few generations ago, it is said, the city man lived a fairly placid life. His home was somewhere near his office, and he got a little gentle exercise in strolling to and from it through moderately quiet streets. He did his work and had a fair amount of leisure.

To-day he begins with a hurried breakfast and a rush for his train. Arriving at the terminus, he rushes for the tube, is shot down in an elevator, has a hurried, nerve-racking journey, is shot up in another elevator, and has perhaps half a dozen hair-breadth escapes from motor-omnibuses and taxicabs in his walk to his office In a word, thanks to the advance of modern civilization, his nerves, which directly and indirectly control his whole circulatory system, are in a state of constant stimulation. The result of all this, it is argued, is that not only nervousness, but also diseases of the heart and blood vessels are much more common, and are attacking Englishmen much more early in life than they were a few generations ago.—Dr. Newsholme, medical officer, Local Board, London.

From 1875 to 1911 Canadian fire insurance companies have paid interest and dividends of $6,708,153.

FEDERAL VERSUS PROVINCIAL CONTROL OF FIRE INSURANCE

Insurance Has Been Held Up Since Confederation Between the Heaven of Dominion Supervision and the Earth of Provincial Interference— A Plea for Uniformity

By T. L. MORRISEY

Without wishing to entrench upon the domain of those whose special duty and training it is to expound that will-o-the-wisp, the law, perhaps it might not be considered presumptuous on the part of a lay man engaged in the trade, or doing the business, or following the profession, or whatever it may be called—of fire insurance, to offer a few observations upon that question of general interest, not only on the part of the insurer but the assured as well,—who has the right to restrict our natural right of doing business with whomsoever wishes to do business with us?

Away back in the sixties when the Fathers of Confederation sat down to write the "rules of the game" to govern the new Dominion—commonly known as the British North America Act—it occurred to none of them to set down insurance as either a subject to be assigned exclusively to the provincial legislatures, or worthy of mention amongst those subjects expressed "for greater certainty" as falling to the Dominion Parliament. The consequence is that insurance has been held up ever since, something like Mahomet's coffin, between the heaven of Dominion supervision and the earth of Provincial interference, or vice versa, to suit the taste or views of the particular individual considering the question, or how it affects his particular interest at that particular moment.

Where the Difficulty Lies.

The chief difficulty seems to turn upon the point whether insurance is a trade of "interprovincial concern," or a contract affecting civil rights. Again with apologies to the legal fraternity, and in all humility, I venture to assert that insurance is trade—buying and selling indemnity—and not only of interprovincial, but, broader still, of international concern. The contract relating to the thing is not the thing itself. If anyone doubts the actuality of the "interprovincial concern" of fire insurance let him but consider the nature of the business. New Westminster burns. What happens? Those engaged in the business know that while one department is busily engaged in adjusting the losses, another is no less diligently employed in getting the remittances from agencies from Halifax to Vancouver, which moneys when received are in turn transmitted to where the loss has occurred. So likewise when a great gash is made in the business district of Toronto by the fire fiend the same process is observed.

If the insurance was on the purely mutual plan, as it might be, no one would question the interprovincial character of the transactions. How then can it be contended that the intervention of a joint stock company alters its character and makes it become a contract of local application only? The principle of mutuality underlies all forms of insurance. The loss sustained by the fisherman along the shores of the mournful and misty Atlantic when his modest habitation burns, if insured, reacts on the grain grower of the Golden West just as truly, though inappreciably, through his premium payment, as it would if the contribution were made direct instead of through the medium of the company that performs the service for both parties.

Folly of Ten Departments.

As to expediency, there hardly seems room for two opinions. What good reason exists for nine different departments with an additional one at Ottawa thrown in for good measure, each with its varying ideas of what is required to safeguard the interests of the people, more especially since a certain proportion of these people seem to think the work is entirely unnecessary as they openly boast they place some $150,000,000 of good Canadian business with companies having so little regard for Canadian authority—federal or provincial—that they pay no attention to it whatever. The peculiar part of our Canadian laws regarding fire insurance is that provision is made whereby these "outlaws" may share in Canadian business to the prejudice of Canadian citizens and companies conforming to Canadian laws. But that is another story.

If no good reason can be given for the existence of provincial departments of insurance, many may be cited in favor of federal control. First in importance, I would place uniformity of practice. Surely there would be some advantage in having the respective rights of the parties clearly defined, and identical, throughout the length and breadth of Canada. The wholesaler in Quebec or Ontario who supplies goods to the country merchant in Manitoba or Saskatchewan would like to feel no uncertainty regarding the security he has to rely upon should these goods be burned—another instance showing the "interprovincial concern" of fire insurance.

Uniformity and Convenience.

Second to uniformity I would place economy. It will be admitted that these different departments cost money and that ten cost more than one; and an added misfortune is that the whole cost is saddled upon the licensed companies, the "outlaws" escaping scot-free.

Then comes convenience. No two provinces think alike as to what should be necessary to safeguard the interest of their citizens in this respect, and consequently the companies are put to a lot of trouble and expense in getting the information called for—at least those companies that conform to the law, the "outlaw" again has an advantage.

Lastly may be urged in opposition to provincial legislation the time take up by our provincial legislators in passing this legislation. In short, each law passed costs so much per law, and if we can do with one and save nine it would seem to be the part of wisdom to make the saving.

Dominion Government Should Cover the Ground.

So much for what may be said against provincial legislation. What may be said in its favor? Just one thing; it has been necessary. It may sound strange after setting forth in detail all the objections to it to make this assertion, but it is nevertheless true. Insurance is a business that needs to be regulated by some authority in the interest of the public, and if one does not do it the other should. The answer suggests the remedy; let the Dominion Government give no excuse for provincial legislation but cover the ground fully, and in no half-hearted fashion. If insurance is a business that should be regulated by the government the government should regulate it, and not, in deference to any selfish interest in the community, no matter how powerful, permit companies failing to comply with Canadian laws to share in Canadian business—"a consummation devoutly to be wished."

◆

CONFLACRATIONS IN CANADA

The following is a list of conflagrations which have occurred in Canada during the past thirty-five years:—

Year.	City or Town.	Losses.
1877	St. John, N.B.	$13,500,000
1904	Toronto	13,500,000
1904	Halifax, N.S.	2,000,000
1906	Moncton, N.B.	1,200,000
1908	Fernie district, B.C.	4,000,000
1908	Kenora, Ont.	1,000,000
1908	Three Rivers, Que.	2,000,000
1909	Quebec	1,200,000
1910	Athabaska, Alta.	1,030,000
1910	Atikakan, Ont.	1,500,000
1910	Rainy River, Ont.	1,000,000
1910	Arnprior, Ont.	4,000,000
1910	Campbellton and district, N.B.	2,500,000
1910	Braeside, Ont.	1,000,000
1910	Victoria, B.C.	1,000,000
1911	Porcupine District, Ont.	3,500,000
1911	Owen Sound, Ont.	1,000,000

The year 1912 fortunately passed without a serious conflagration, although large fires were numerous.

◆

The representatives of thirty state fire prevention associations were present at a meeting held last month at Cincinnati by the committee on state fire prevention of the National Fire Protection Association. The principal topic of discussion was the formulation of a uniform policy to carry out the work throughout the United States. The different associations agreed to lend their assistance in securing the rank and file of the fire departments in the cities to inspect all property within the city limits.

LIFE INSURANCE RESULTS AND OUTLOOK

Past Year Promises to be Record in History of Canadian Underwriting While Present Prospects Show a Bright Twelvemonth Ahead

The total amount of life insurance policies taken during 1911 was $176,866,979, which was greater than the amount taken in the previous year by $24,104,459. From reports received by The Monetary Times from the life insurance companies, the figures for the past year will show a considerable increase over those of any other twelve months' period. At this early date, it is impossible to obtain the actual figures of last year's operations as all the companies have not completed their statements. The general results, however, are very satisfactory, and all companies have shared in the prosperity of 1912. These results have been obtained throughout the Dominion and not in isolated provinces. While one company states "Western Canada continues to contribute liberally to the success obtained in writing life insurance." Another mentioned the increased business done "chiefly in Eastern Canada." While the third is responsible for the statement "We are operating in every province of the Dominion, with the exception of Prince Edward Island, and find that last year, perhaps, was the greatest of all years in Canadian life insurance."

Increases in New Business are General.

There was practically an increase in the business done in 1912 by the Canada Life Assurance Company of twenty-five per cent. over 1911, and collections were uniformly satisfactory throughout the year. The death claims were a few thousands in excess of those of the previous year, and the average interest rate probably showed a slight increase over that of 1911.

The Dominion Life Company's new business was in advance of the previous year by a considerable amount. The death rate was favorable, and all prospects showed that last year was the best the company ever experienced.

As far as the London and Lancashire Association, Limited, is concerned the year 1912 was a satisfactory one, having regard to the volume of new business. The returns were in excess of those for the previous year, and a substantial increase over the previous year's figures was recorded.

Western Canada is a Factor.

The Monarch Life, had written over two millions of business for the first ten months of 1912, which was in excess of the amount aimed at at the beginning of the year. This company was then seventy-five per cent. ahead of 1911 in new business, and had only one death record of less than $5,000. The collections respecting loans were early and satisfactory.

The total applications received by the Crown Life Company amount to approximately $4,000,000, and the company anticipated a net increase in business in force of about $2,500,000, or a total business in force of about $10,000,000. Western Canada continued to contribute liberally to the Crown Life's success in writing life insurance. Premium and investment interest payments were exceptionally satisfactory in the West last year.

The Travellers Life Assurance Company of Canada expected to report two and one-half million paid for business, and total business in force at the end of last year in the neighborhood of four million dollars.

An exceptionally favorable mortality was experienced, and a substantial increase made in the assets as well as in the surplus.

Satisfactory Throughout Entire Field.

A record year in all branches was the prospective result of the Confederation Life Association, who also added that their business up to December was exceptionally large.

The Prudential Insurance Company, reported that results for the year 1912 were highly satisfactory throughout its entire field of operations. This statement applied to both industrial and ordinary business. The Canadian organization of the company rendered splendid service in every part of the Dominion where we transact business. The amount of business done showed that Prudential methods and policy contracts were approved in Canada.

The Aetna Life Company, made a large increase in its life business over that of 1911 and previous years..

All provinces contributed to the average of over two millions a month in applications received by the Great-West Life in 1912. Residents in the east saw the advantage of sharing in the investment opportunities of the West and much business was obtained from Eastern Canada.

The investments of the company continued to show a satisfactory condition. Over $8,500,000 is invested in western first mortgages, and the directors had every reason to be satisfied with conditions as regards the demand for money, the rates prevailing, and the way in which payments of interest and principal were met during the past year.

Last August the company reached its twentieth business anniversary. Its progress was evidenced by the fact that on the anniversary date the business in force was $77,349,974. Since that date an amount of several millions was added to the business on the books.

Loans and Investments.

The Northern Life Assurance Company of Canada has been for several years laying the foundation for an increasing business in the matter of life insurance in the western provinces believing the young men of the east and the northern American states were going there. Those anticipations have been realized, and during the last year the business far exceeded any previous year.

Mortgages on lands at a very remunerative interest and with care in the valuations have proven satisfactory investments, and western lands are increasing in value and finding ready sales.

The business of the London Life Insurance Company was much ahead of any previous year in every particular up to the end of November. In business issued the increase was over $1,000,000 and in income the increase for nine months was in excess of any previous twelve months in the history of the company. In the investment department the demand for loans was unprecedented and rates averaged probably higher than ever before.

La Sauvegarde Life Assurance Company's progress is shown in the facts that it has obtained, during the past year, a Dominion charter, and a federal license was granted it on August 1st, and it is now organized in nearly all of the provinces of Canada. A ten-story building has been built in the centre of the city of Montreal, as the head office of this company, who has shared in the prosperity of the year.

A handsome gain in new business, a largely increased income, and probably additions to the surplus is what the Mutual Life Assurance Company of Canada's annual statement for the past year will show. In common with other life companies and financial institutions, a full share of the present great business prosperity in Canada was obtained. The outstanding feature for the year was the extraordinary demand for loans. This demand was the natural result of, and followed in the wake of business expansion, but, during the past year, applications for funds have been more numerous than in any previous year; at least such was the experience of the Mutual Life. In consequence, the rate of interest advanced, and the profits from investments were quite appreciable.

The Security Life Insurance Company of Canada year's returns probably showed over $1,000,000 insurance in force. The company has been operating chiefly in Quebec and Eastern Ontario, and during this year, expects to extend operations to some of the western provinces.

Canadian British and American Companies.

The Canadian companies showed an increase in 1911 of $19,714,775, whilst in 1910 they had an increase of $11,240,701; the British companies had an increase of $1,421,270, whilst in 1910 they had an increase of $240,332; and the United States companies had an increase of $2,968,414, whilst in 1911 they had an increase of $9,542,409, the total increase in 1911 being $24,104,459.

The respective amounts effected were:—

Canadian companies	$110,077,453
British companies	5,591,832
American companies	61,197,694

The amount taken by Canadian companies exceeded that taken by the British and American together by over $43,000,000.

Life Insurance in Force.

The total amount of insurance in force in Canada at the end of 1911, was $950,220,771, which showed the large increase of $94,107,712 over that of the previous year, being distributed as follows:—

	Amount in force.	Increase.
Canadian companies	$626,770,154	$61,103,044
British companies	50,919,675	3,102,900
American companies	272,530,942	29,901,768
Total	$950,220,771	$94,107,712

The amount of insurance terminated in natural course, namely, by death, maturity, or expiry, was $15,124,390, which is greater by $1,554,371 than the corresponding amount in the previous year; and the amount terminated by surrender and lapse was $79,263,406, being greater than in the previous year by $6,563,310.

The average amount of new policies in 1911 was: for Canadian companies, $1,816; for British companies, $2,699;

and for United States companies, $1,551. The corresponding amounts last year were $1,740, $2,347 and $1,440.

Payments to Policyholders.

Including the business done outside of Canada by the Canadian companies, and the Canadian business of the British and United States companies, the total amount paid to policyholders during 1911 was as follows:—

Death claims (including bonus additions)	$9,207,850.71
Matured endowments (including bonus additions)	3,568,026.68
Annuitants	570,423.15
Paid for surrendered policies	3,703,781.82
Dividends to policyholders	2,144,746.06
Total	$19,194,828.42

The Canadian companies received an income of $39,514,397, drawn from the following sources:—

Premiums and annuity sales	$29,725,159
Interest and dividends	8,967,493
Sundry	821,745
Total	$39,514,397

They expended $21,408,117 under the following items:—

Paid to policyholders and annuitants	$12,210,823
General expenses (including investment expenses)	8,466,073
Taxes	323,605
Dividends to stockholders	407,616
Total	$21,408,117

The amount of risks in force increased during the year from $707,498,804 to $783,885,051, a gain of $76,386,247, and the reserves increased from $146,487,697 in 1910 to $161,720,102 in 1911, an increase of $15,232,405.

The above figures refer only to companies licensed to chartered by the Dominion Government.

The outlook for this year as reported to The Monetary Times is generally promising, both as to business attainable, and satisfactory investment opportunities, and extension of all branches of the life insurance business.

FIRE INSURANCE RESULTS AND OUTLOOK

Losses Were Heavy While Incomes Showed Increases —Present Year Should be Much More Satisfactory

Fire insurance men are bound to wait until midnight of December 31st before venturing to tell what kind of a year they have had. It is well into the new year, too, before all the adjustments and accounts of the previous year are settled. The Monetary Times register of fire losses, however, has given from month to month an idea of the situation. The reports of the companies received during the past few weeks by The Monetary Times show that the fire waste in 1912 was practically as extensive as in 1911, and that, taking the average, insurance losses were equally as heavy. A remarkable number of fires occurred on which there was no or insufficient insurance.

The extent of fire underwriting in Canada may be judged by the figures of 1911, the latest available:—

	Canadian companies.	British companies.	United States companies.
Gross risks taken during year	$572,066,012	$998,101,547	$417,473,032
Premiums charged thereon	8,038,316	13,279,506	5,569,346
Net cash paid for losses	2,519,177	6,181,888	2,235,880
Net cash received for premiums	4,727,139	11,205,691	4,642,620

Premiums in Millions.

Summarized, the figures are as follows:—

Gross risks	$1,987,640,591
Premiums charged	26,867,169
Losses	10,936,947
Cash from premiums	20,575,251

The premiums received during the 43 years, 1869 to 1911 were $320,041,252; the losses paid were $201,495,309. The rate of losses paid on premiums received during that period was 62.96. The above figures refer only to companies licensed or chartered by the Dominion government.

Fire waste during 1912 is discussed elsewhere in this issue.

Municipalities are realizing slowly the need of efficient fire-fighting apparatus, and, what is better, the scientific prevention of fires by strict enforcement of building enactments, cleaning-up days, etc., though individuals do not seem to recognize yet their responsibility for conflagrations as they should do.

Suggestions and Hints.

The suggestion of one fire insurance manager is that a public officer be appointed in each town to inspect buildings, with power to order defects in heating apparatus to be rectified and the removal of accumulations of refuse, while others complain of lax by-laws in some municipalities and also of the prevalence of shingle roofs.

The general experience of companies throughout Canada, and especially in the provinces east of the Great Lakes, was unsatisfactory from a fire insurance point of view is the belief of Mr. Alfred Wright, manager for Canada of the London and Lancashire Fire Insurance Company, during the first four or five months of last year, owing, doubtless, in part at least, to the very severe weather conditions prevailing. For the succeeding months fires were not quite so frequent, so that underwriters in Canada may have had a fairly profitable year.

An outstanding feature of the business during 1912 was the number of sawmill fires in Ontario, mostly in well-constructed, low-rated risks, involving a large amount of insurance.

As to the future, it is naturally impossible to predict probable loss ratios, but, as the prospects of general business in Canada from the Atlantic to the Pacific seem to be good, a fair expansion in premiums should result, modified to some extent by the increased use of schedule rating, which has resulted in improved building conditions and a consequent lowering of rates; also by the fact of increased competition, both from licensed companies, regularly authorized to transact business here, and from unlicensed offices.

It is a pity that firms making their profits in Canada, and most of them asking tariff protection for their particular interests, says Mr. Wright, cannot see that it is unfair to place their business with unlicensed companies, who do not pay taxes nor disburse here in rents, supplies or salaries any portion of the premiums they receive.

At the end of November the gross loss ratio of General Fire Assurance Corporation was about 43 per cent., while the income for the eleven months totalled $234,000, which is an increase of about $14,000 over the corresponding period of last year. The expense ratio was a trifle higher than the previous year, and stood at 31.25 per cent. against 30 per cent. for 1911. The cost of business seems to be on the increase, which largely may be attributed to the influx of new companies into this field.

Companies Are Not Optimistic.

The year 1912 was not particularly profitable for fire insurance companies in Canada, states the Quebec Fire Asurance Company, although the past year of prosperity should result in an increased premium income.

The Liverpool, London and Globe Company estimated in November that the fire losses had been somewhat greater than the average of the past five years, and that the result of the year's business would probably be below the average.

Last year's business of the Law Union and Rock Insurance Company is expected to show a small margin of profit.

The Royal Exchange Assurance Company's premium income in Canada last year was around $300,000. The loss ratio at mid-November was less than 40 per cent.

The London Mutual Fire Insurance Company showed a fair underwriting profit at the close of November, and under normal conditions would show at the end of the year a margin of profit.

Profits Expected and Prospects.

Most agencies will show a profit is the opinion of the Germania Fire Insurance Company, of New York.

The first eleven months of 1912 have been better than in an average year. Business conditions were generally satisfactory is the summing up of the Canadian Fire Insurance Company.

As regards the year 1913, every expectation of better results is shown, as many classes which have proved unprofitable to companies have been placed on the prohibited list, and the volume of premium on desirable classes of business is steadily increasing; consequently, the year 1913 should be satisfactory to fire underwriters under normal conditions.

Progress was reported by the Pacific Coast Fire Insurance Company. Their premium income in Canada up to December had increased over the corresponding period of the previous year about 35 per cent., with a normal loss ratio, and western business showed a greater margin of profit than that of eastern Canada.

LOANS ON LIFE INSURANCE POLICIES

Amount is Not Large in Canada, but Tendency to Borrow is Increasing

The loans on life insurance policies issued by Canadian companies do not amount to a large sum. According to the latest official figures, the amount on loan at the end of 1911, was $21,712,365. The amount of life insurance in force at the same time was $950,000,000, of which sum Canadian companies were responsible for $626,000,000. Here are the details of the various companies:—

	Policy Loans.		
Company.	Made.	Repaid.	Balance Dec. 31, 1911.
Canada Life	$ 530,104.03	$ 341,700.91	$ 6,363,234.51
Confederation Life	252,762.34	162,339.45	2,147,242.04
Continental Life. ..	14,648.22	5,703.23	90,172.00
Crown Life	17,526.00	9,211.00	136,907.75
Dominion Life	19,035.94	11,515.08	137,101.88
Excelsior Life	35,653.09	25,572.79	192,156.68
Federal Life	62,174.63	26,870.63	521,056.66
Great-West	214,443.91	94,834.96	1,061,301.59
Home Life	18,651.22	12,823.64	101,035.97
Imperial Life	112,541.99	48,454.80	663,198.66
London Life	27,225.47	23,565.15	186,631.75
Manufacturers Life	330,360.64	231,104.42	1,846,807.92
Monarch Life	2,901.66	None.	3,842.11
Mutual Life of Canada	370,429.98	285,751.57	2,264,431.07
National Life of Canada	25,000.38	15,531.05	131,452.05
Northern Life ...	30,416.25	16,841.90	126,536.47
North American ..	183,270.31	103,871.40	1,508,615.36
Royal Guardians .	5,551.28	2,591.49	55,238.72
Sovereign Life ..	28,023.29	18,718.69	97,807.62
Subsidiary High Court of the A. O. F.	630.00	546.00	8,584.00
Sun Life	812,234.68	394,755.09	4,021,255.09
Union Life	9,309.15	3,124.62	47,755.68
Totals	$3,102,894.46	$1,835,427.87	$21,712,365.58

Loans and Premiums.

The following table shows the loans and premium obligations upon policies of the Canadian life insurance companies since 1901 and the proportion which loans and obligations bear to funds of the companies:—

Year.	Amount.	Proportion.
1901	$ 6,437,682	9.7
1902	7,044,111	9.6
1903	7,042,580	9.7
1904	8,812,029	9.7
1905	9,679,244	9.4
1906	11,091,446	9.7
1907	14,057,512	11.2
1908	16 750,846	12.1
1909	18,409,651	12.0
1910	20,409,223	12.3
1911	22,960,040	12.0

The proportion of policy loans and premium obligations to the companies' funds declined slightly in 1911. That proportion is much higher than in 1907, and at almost the same level as in 1908, in both of which years, owing to financial stringency, there was good reason for borrowing upon the securities of life policies. In 1911, the amount of these borrowings increased by $2,500,000, a figure exceeded only in the two years mentioned.

Repaying by Instalment.

Several of the companies in the United States are permitting policyholders, to whom loans have been made on their policies, to repay the loans on the instalment plan. That is a significant indication of the thought being given by life insurance executives to a problem which is becoming more urgent. Policyholders have extended the legitimate use of the borrowing privilege for the payment of premiums and as a last resort in times of financial stress, to an illegitimate use at times when neither of these reasons can be pleaded. The matter has not become exceedingly serious in Canada, but sufficiently so to demand more thought from life underwriters.

◆

It can safely be stated that 60 per cent of fires occur from preventable causes, and in most cases are the result of carelessness, while lack of presence of mind in the early stages will often result in a trifling fire ending in a total burn-out. What usually happens is that the very worst measures are adopted, windows being smashed, doors burst open, or in cases where oil lamps have been upset, water used instead of sand.—A. F. M. Rolland.

CANADIAN FIRE POLICIES ABROAD

Fifteen Companies Are Writing Heavy Risks in Foreign Fields—Latest Official Statistics

The fire as well as the life insurance companies of Canada have gone abroad in search for business. In some cases, the foreign business has been found unprofitable. One company, for instance, withdrew last year from many states in the neighboring republic, in which it was writing policies. The British America and the Western have the largest volume of foreign business.

Here is a list of the companies and their fields in addition to the Dominion:—

Acadia Fire Insurance Company; Newfoundland.

Anglo-American Fire Insurance Company; Great Britain, Newfoundland, United States.

British America Assurance Company; United States, Mexico, Porto Rico, Honolulu, Continent of Europe, Batavia, Japan, Macassar, Philippines, Java, Egypt, India, Burma, Ceylon, China, Hong Kong, Antigua and Bermuda.

Canadian Fire Insurance Company; Newfoundland.

London Mutual Fire Insurance Company of Canada; Great Britain, Newfoundland and United States.

Mercantile Fire Insurance Company; India.

Montreal-Canada Fire Insurance Company; Great Britain, Newfoundland, United States.

North Empire Fire Insurance Company; Newfoundland

Nova Scotia Fire Insurance Company; Newfoundland.

Occidental Fire Insurance Company; Newfoundland.

Ontario Fire Insurance Company; Newfoundland, United States, Colon, and Jamaica.

Pacific Coast Fire Insurance Company; Great Britain.

La Compagnie d'assurance contre l'incendie de Rimouski United States.

Sovereign Fire Assurance Company of Canada; United States and Great Britain.

Western Assurance Company; Newfoundland, the British West Indies and the United States. The company also has a branch office in London, England, through which business is transacted in Great Britain and the British possessions in the far east and in Africa, as well as at some points on the Continent of Europe and Australia.

The following table gives the results for 1911 of these companies:—

Net cash received for premiums	$ 1,293,812
Gross amount of policies, new and renewed....	286,093,924
Net amount at risk at date	223,171,325
Net amount of losses incurred during the year ..	842,151
Net amount of losses paid	836,086
Unsettled claims not resisted	144,359
Unsettled claims resisted	18,759

◆

A correspondent wants to know why a man cannot insure against an attack of insanity, believing that the working out of rates would be an easy matter for any actuary possessing the latest statistics on the incidence of lunacy. We see no difficulty about fixing rates should any company wish to offer such policies, but where are the people likely to take them? There would not be sufficient applicants, human nature being what it is, to make the business remunerative. Insanity is the last thing in the world that a man ever thinks he is likely to have, and, if it comes upon him, he generally regards the other fellow as being mentally wrong and not himself. If our memory is not at fault, one or two non-tariff offices opened an insanity section, but none have survived. It is very doubtful whether it will ever be revived.—Exchange.

What principles are to be embodied in a new workmen's compensation law for Ontario? Let me mention a few of them. That it seems self-evident any legislation should have in view the prevention of expense, and any legislation that would put a premium on the prevention of expense should be supported. We must seek to minimize as far as we possibly can the amount of expenses which occur. Then the next is that the industry should bear the cost. In other words, the modern view should prevail, and just as the manufacturer in estimating the cost of production, takes into consideration possible breakages and loss in machinery, and if he is a wise man, in fixing his price, considers this as part of his cost, and it should be considered and treated by him just the same way. Immediately it will entail an increased cost to a certain extent to the employer of labor, but ultimately just as any other item of expense it will be charged up against the consumer or general public, who will have to bear the cost of the product, and it should pay the expense and not the poor workman or his family who suffer by it.—N. W. Rowell, M.P., Toronto

BRITAIN'S NATIONAL INSURANCE ACT

It Covers Health and Unemployment Insurance and Has Many General Provisions—Came Into Operation Last Year

Much was heard in Canada last year of the national insurance legislation of Great Britain. Cable messages told of the successes and the failures of the scheme, of imprisonment for non-compliance with the law, of the refusal of the doctors to do the part required of them. On July 15, 1912, the National Insurance Act, 1911, of Great Britain, enacted December 16, 1911, came into operation. The act is divided into three parts, the first relating to health insurance, the second to unemployment insurance, or provision of benefits for workmen temporarily unemployed, and the third to general provisions, the title of the act being "An act to provide for insurance against loss of health and for the prevention and cure of sickness and for insurance against unemployment, and for purposes incidental thereto."

Under its provisions health insurance is compulsory upon all employed persons aged 16 and upward, except those in the naval or military services of the Crown, those in other employment under the Crown or under local or other public authorities for whom adequate provision respecting sickness or disablement already exists, employees of railway companies and the like provided for by suitable benefits, teachers provided for under other acts, etc. Those affected by the exceptions are comparatively few, and may, in the discretion of the insurance commissioners, be transferred to the compulsory insurance scheme set forth in the general plan. Persons who are not subject to the compulsory insurance may voluntarily insure if they are engaged in some regular occupation and are wholly or mainly dependent for their livelihood on their earnings in such occupation or have been insured persons for a period of five years or upward; no person may become a voluntary contributor whose annual income from all sources exceeds £160 ($778.64) unless he has been previously insured for a period of five years or upward. There is no discrimination in respect of sex or of citizenship, but all insured persons must be residents of the United Kingdom.

Health Insurance Rates.

The standard rates of contribution for health insurance are 7d. (14 cents) for men and 6d. (12 cents) for women. This amount is made up of contributions from employer, employee, and public funds, the amount paid by each depending on the insured person's rate of wages. If this reaches or exceeds 60.8 cents per working-day, the employer pays 6.1 cents, male employees pay 8.1, and female employees 6.1 cents per week, nothing being contributed from the public funds. If the rate of wages falls between 49 and 61 cents a day the employer pays for male employees 8 and for female employees 6 cents a week, and the employee, regardless of sex, pays 6 cents. When the rate of wages is between 37 and 49 cents a day the employer pays 10 cents per week for men and 8 cents for women, the employee pays 2 cents, and 2 cents is contributed from the public funds. When the rate of wages does not exceed 37 cents a day the employer pays for men 12 and for women 10 cents a week, the employee pays nothing, and 2 cents a week is provided from the public funds.

Employers make Payments.

These provisions relate only to employees of the age of 21 or upward. Employers are authorized to make payments in behalf of their employees and to deduct the employees' contributions from any wages payable by them to such employees. Contributions by voluntary contributors are to be made at rates fixed in accordance with a table to be prepared by the insurance commissioners, and are to be payable weekly or at other prescribed intervals by the contributors themselves. No contributions shall be payable in behalf either of employed persons or of voluntary contributors after they have attained the age of 70 years.

The benefits under the provisions for health insurance consist of medical treatment and attendance, medicines, and such medical and surgical appliances as may be prescribed by regulations made by the insurance commissioners; treatment in sanatoria or otherwise for persons suffering from tuberculosis or such other diseases as the local government board may designate is also included, besides periodical payments during incapacity for work on account of some specific disease or bodily or mental disablement, such payments to continue for a period not exceeding 26 weeks. The sickness benefit is for men, the sum of 10s. ($2.43) and for women 7s. 6d. ($1.83) during the full term of 26 weeks.

A disablement benefit of 5s. ($1.22) per week is allowed in case of either men or women where incapacity results from a disease or disablement for a period in excess of the 26 weeks' sickness-benefit allowance; this disablement benefit continues during the term of incapacity. Maternity benefits and additional benefits are also provided for. Reduced amounts are payable in cases of unmarried minors, of persons over 50 years of age in certain cases, and for married women. Insured persons who are entitled to compensation or damages under the workmen's compensation act, employers' liability act, or at common law have their benefits reduced so that the total shall not exceed the amount provided for by the insurance act, or if the benefit from other sources is greater than that provided by the insurance act no benefit from this source shall be paid. Where insured persons or other beneficiaries under the act are inmates of any workhouse, hospital, asylum, etc., supported out of public funds, no payments shall be made on account of sickness, disablement, or maternity during the period of such residence.

Members of Friendly Societies.

The administration of the sickness, disablement, and maternity benefits is committed, in the case of insured persons who are members of an approved society (friendly societies, trade unions, provident societies, etc.), to the societies of which they are members, which societies are also charged with the duty of receiving the contributions of their members in this behalf. Medical and sanitary benefits are administered through the insurance committees described below. Persons not members of an approved society may pay their contributions through the post office, the fund thus created being subject to the control of the insurance committees. Special provisions are made in respect of married women, aliens, persons employed in the mercantile marine, in seasonal trades, etc.

A central administrative body known as the insurance commissioners is created as a body corporate, with the power to appoint officers, inspectors, referees, etc., subject to the approval of the treasury as to their numbers and compensation, for the carrying out of the purposes of this act. An insurance committee is also constituted for every county and county borough, its membership to consist of not less than 40 nor more than 80 persons, some of whom must be women.

These committees are authorized to subdivide the counties or boroughs into areas over which district insurance committees shall have supervision, and are required to make reports to the health of insured persons and the conditions affecting the same within their respective counties and county boroughs, and also to disseminate information on on matters relative to health, co-operating, if thought best, with local educational and other institutions for this purpose. Causes of excessive sickness may be inquired into at the instance of insurance commissioners or of an approved society or by an insurance committee, and where such excess is due to neglect or insanitary conditions the costs of any extra expense may be demanded from the persons chargeable with such neglect, and in inquiry may be made by a special appointee of the secretary of state or local government board to determine as to the facts in the case and the justice of such claim.

Compulsory Unemployment Insurance.

The second part establishes a scheme of compulsory insurance providing for benefits in cases of unemployment in certain trades. The list of trades may be extended by the board of trade, which will administer this portion of the act, but for the present those included are seven in number; i.e., building, including the construction, alteration, demolition, etc., of buildings; the construction of works, including railroads, docks, harbors, canals, etc.; shipbuilding; mechanical engineering, including the manufacture of ordnance and firearms; iron founding; the construction of vehicles; and sawmilling, including machine woodwork.

The contributions for this form of insurance are made partly by the workmen, partly by employers, and partly drawn from the public funds. Workmen and employers pay equal shares of a weekly contribution of 5d. (10 cents), while parliament contributes annually a sum equal to one-third of the total contributions received from employers and workmen during that year. In general the employer is expected to pay the contributions of both himself and his workmen, deducting the workman's portion of the contribution from wages payable to the latter.

How It Is to Work.

Applicants for benefits under this branch of the act must show that they have been employed in an insured trade in each of not less than 26 separate calendar weeks in the preceding five years, that they are capable of working but unable to obtain suitable employment, and have not exhausted their right to benefits under this part of the act. Workmen are not required to accept employment in place of striking workmen, or at a lower rate of pay than is customary in their line of employment in their district. Where, however, the employment is lost by reason of a stoppage of work due to a trade dispute in the establishment in which the workman was employed he can receive no benefits so long as such stoppage of work continues unless he has during such stoppage become actively employed elsewhere in an insured trade.

Workmen losing employment through misconduct or voluntarily leaving employment without just cause may receive no benefits for a period of six weeks from the date of such loss of employment. The benefits payable in cases of unemployment begin after the first week of the period of unemployment and are fixed at 7s. ($1.70) per week unless some other rate is prescribed. Employment benefits are not payable for more than 15 weeks within a period of 12 months unless some other benefit period is prescribed, nor shall workers in general receive any unemployment benefit in excess of one week's benefit for every five contributions paid by them under the act.

Claims and Arbitration.

Provision is made for the determination of claims and the arbitration of disputes in both branches of the act, and many exceptions and modifications are made to meet various conditions as to transfers of funds, refunds, creation of reserves, etc., but the above presents an outline of the principal features of the act. It is estimated that there are 14,000,000 insurable persons in the compulsory class and approximately an additional 2,000,000 who may become voluntary members if they so desire, though probably not more than half of these would care to do so. It was estimated that of the above number 10,000,000 registered with the approved societies and an additional 500,000 took out cards at the post office within the first three days after the act came into operation.

LIFE INSURANCE PREMIUM INCOME

Record of Companies in Canada for Over Thirty Years —Past Year Will Make New High Mark

Including the life insurance business done outside of Canada by the Canadian companies the following table shows the total premium income and payments to policyholders of all companies, other than assessment and fraternal companies, doing life insurance business in Canada, for the last thirty-three years, and also the ratio of payments to policyholders to premiums received:—

Year.	Premium income.	Payments to policyholders.	Rate of payments to policyholders per cent. of premiums.
1879	$ 2,606,756	$ 1,301,480	49.93
1880	2,691,128	1,389,986	51.66
1881	3.094,689	1,879,240	60.72
1882	3,544,603	1,946,444	54.91
1883	3,861,179	2,201,152	57.01
1884	4,195,726	2.073,395	49.42
1885	4,684,409	2,544,101	54.31
1886	5,298,596	2,851,981	53.83
1887	6.105,474	3,235,205	52.99
1888	6,665,762	3,440,729	51.70
1889	8,336,167	3,942,590	47.29
1890	8,131,852	4.445,668	54.67
1891	8,667,609	4,911,485	56.66
1892	9.347.131	5.452,151	58.33
1893	9.952,833	5.133,284	51.58
1894	10,345,919	5,516,929	53.32
1895	10,887.501	5,862,447	53.85
1896	11,469,040	6.506,096	56.73
1897	12,197,626	7,076,962	58.02
1898	13,190,742	6,782,006	51.41
1899	14.490,102	7,680,959	53.01
1900	16,633,142	9,232,061	55.50
1901	17,130,456	8,993,125	52.50
1902	19.501,945	9.307.071	48.19
1903	21,240,823	10,288,364	48.44
1904	23,650,887	1,804,359	49.91
1905	26.535,365	13,796,504	51.99
1906	27,264,938	13,040,857	47.83
1907	28,403,423	14.753.533	51.94
1908	30.567,533	16,122,797	52.74
1909	33,304,241	16,382,136	49.19
1910	37,868,196	20,270,505	53.53
1911	40.608,305	19,194,828	47.27
Total	$482,464,118	$249,451,420	51.70

Hence for every $100 premiums received there has been paid to policyholders $47.27, leaving $52.73 to be carried to reserve expense and profits.

Collecting the results for the thirty-three years, 1879 to 1911, we find that the total payments to policyholders amount to 51.70 per cent. of the premium incomes during the same period. The premium income for 1912 is estimated to be at least $3,000,000, and probably $5,000,000 greater than that of 1911.

AVERAGE AGE AT DEATH

Tabulation of Diseases and Number of Years Lived—Some Interesting Census Figures

The average age at death is the result obtained by multiplying the number of persons dying at each age by that age and dividing the sum of the product by the total number of persons that died. The median age is the age which represents the middle point at which the decendents are equally divided, one-half being below and one-half being above that age, and a volume on mortality statistics issued by the United States bureau of statistics contains the following tabulation.

The average age corresponds approximately with the median age for the total of all causes and for many individual causes.

The average at death, all causes, in 1909, was 38.8 years, against 37.9 years in 1908.

Various Examples Shown.

If one is to die of a disease of the nervous system, he will live about 50.3 years, according to the 1909 mortality. If he is to die of a disease of the circulatory system, he will have lived about 60.3 years. If he is to die of a disease of the respiratory system, he will have lived about 33.5 years. If he is to die of a disease of the digestive system, he will have reached the age of about 22 years. If he is to die of a disease of the genito-urinary system, he will have attained the age of about 56.2 years. If he is to die of a disease of the skin, he will have lived about 54 years. If he is to die of a disease of the locomotor system, he will have attained the age of about 23.4 years. If he is to suffer a violent death, he will have reached the age of about 35.3 years. If on account of old age, he will be about 82.7 years old when he passes away.

Causes and Averages.

The latest census figures showing the average age at death from various causes:—

Causes of death.	Average Age at Death. (Total Deaths.) 1909.	1908.
All causes	38.8	37.9
I.—General Diseases	36.8	36.6
Typhoid fever	29.0	28.8
Malarial fever	36.0	34.1
Smallpox	28.1	28.0
Measles	3.8	4.2
Scarlet fever	6.7	6.7
Whooping cough	1.6	1.5
Diphtheria	6.2	6.5
Croup	3.8	3.6
Influenza	55.5	57.1
Cholera nostras	43.3	42.5
Dysentry	43.4	40.5
Erysipelas	37.3	36.8
Other epidemic diseases	10.2	12.0
Septicemia	36.4	35.4
Tuberculosis (all forms)	34.2	34.1
Tuberculosis of lungs	36.1	35.9
Tuberculosis meningitis	9.0	9.0
Abdominal tuberculosis	31.3	31.7
Pott's disease	30.4	28.9
Tuberculosis abscess	28.3	27.1
White swelling	29.3	30.4
Tuberculosis of other organs	35.5	34.5
General tuberculosis	29.2	29.2
Scrofula	10.2	10.6
Venerial diseases	17.5	17.8

LIGHTNING AND RURAL LOSSES

Consulting the report of the inspector of insurance for Ontario, it is found that of all the claims paid for losses by fire in Ontario during the years 1900-1909 inclusive, the loss due to lightning was $1,366,826, which is 12.5 per cent. of all losses paid during that time, including cities and towns (and thereby the great Toronto fire), as well as the country, states Professor Wm. H. Day, of the Ontario Agricultural College, Guelph. Since risks are not taken at full value and since numerous buildings are burned which are not insured at all it would probably be a safe estimate that the actual loss on buildings due to lightning during the above period is probably $2,500,000 or more. Besides this there is the immense loss in live stock caused by lightning, which would probably be as much more, making $5,000,000 in all.

When farm buildings only are considered the percentage of loss caused by lightning is much greater than 12½ per cent. During the summer of 1911 the department of physics at the Ontario Agricultural College, with a view to securing information upon the subject sent letters of inquiry to one hundred and thirty-eight insurance companies doing business in Ontario. A number of these do not insure farm buildings at all, and from some others the information obtained was not in a form that could be tabulated. However, forty of the companies who replied were definite in their reports, and from these reports we find that of all the rural house claims settled by the forty companies during an average period of 12½ years 26.8 per cent. were due to lightning. Of all the barn claims settled during the same period 66.25 per cent. were due to lightning. Including both barns and houses, it was found that of all rural claims paid during that time 45.4 per cent. were due to lightning. The same reports show that of all rural buildings struck by lightning 21.4 per cent. were completely destroyed. It is a fair assumption that the reports of the forty companies represent pretty accurately the conditions throughout the country.

◆

In two years Mrs. E. H. Harriman received 6,000 "begging letters" asking her to give away a total of $267,000,000. What about insurance against that risk?

REVISED ACCIDENT POLICY FORM

Elimination of Children's Insurance—New Clauses—Conditional Full Coverage for Automobile Accidents

The committee appointed at the Convention of Casualty Underwriters to draft a new policy form, eliminating some of the frills of the present forms, unanimously recommended the following modifications of the existing accident forms after January 1st, 1913:—

1. That no policy be issued without signed application.
2. That children's insurance be eliminated.
3. That beneficiary insurance be eliminated.
4. That no specific mention be made in any contract of the payment of loss by reason of sunstroke, freezing, gas or poison.
5. Death, dismemberment and loss of sight—single indemnity.—That the payments for death, dismemberment and loss of sight be limited as follows: life, principal sum; both hands or both feet or sight of both eyes, principal sum; one hand and one foot, principal sum; either hand or foot and sight of one eye, principal sum; either hand or foot or sight of one eye, one-third principal sum Loss shall mean, with regard to hands an feet, dismemberment by severance at or above the wrist or ankle joints; with regard to eyes, entire and irrecoverable loss of sight.

As to Partial Indemnity.

6. Partial indemnity—single indemnity—Or if such injuries, independently and exclusively of all other causes, shall continuously partially disable the insured from the date of accident, or continuously partially disable him from the termination of a period of total loss of time the company will pay for not exceeding twenty-six consecutive weeks, as follows: (1) A weekly indemnity of one-half the rate for total loss of time during that portion of the period throughout which the insured suffers such total disability of at least 50 per cent. of his business time; (2) a weekly indemnity of one-quarter the rate for total loss of time during that portion of the period for which the insured is not entitled to a benefit under the preceding clause, but throughout which he is disabled from performing one or more important daily duties pertaining to his occupation.

7. Double indemnity.—If such injuries are sustained (1) while a passenger in or on any railway passenger car or vessel licensed for the transportation of passengers, provided in either case by a common carrier and propelled by mechanical power (excluding injuries sustained while getting on or off or being upon the step or steps of any railway or street railway car); (2) while a passenger in a passenger elevator (excluding elevators in mines), or are caused (3) by the burning of a building while the insured is therein, provided the insured was in the building at the commencement of the fire, the company will pay double the amount otherwise payable under Part —— of this policy.

Adoption of Various Clauses.

8. The use of the words "external and violent" in connection with the phrase "accidental means" in the insuring clause of the policy.

9. The adoption of a clause excluding bodily injuries which shall result directly or indirectly from the bites or stings of insects, or from ptomaines, or from disease in any form, or any bodily injury, fatal or non-fatal, sustained by the insured while participating or in consequence of having participated in aeronautics.

10. The adoption of a clause providing special indemnity for certain automobile, motor cycle and motor boat accidents as follows: If such injuries are sustained by the insured while driving or cranking an automobile, motor cycle or gasoline motor boat the company will pay only one-half of the amount otherwise payable under Part —— of the policy.

11. The adoption of an accumulation benefit clause as follows: "Commencing with the second year of this insurance 5 per cent. shall be added annually to the principal sum of the first year until such additions shall amount to 50 per cent., and thenceforth so long as this policy shall be maintained in force the insurance will be for the original principal sum plus the accumulations." And hereafter no substitute shall be offered for above accumulations either by rider, indorsement or the issuance of a policy giving the accumulations in full with or without an additional premium.

Basic Rate is Used.

12. It was also unanimously agreed that no policy of accident insurance should be issued giving greater benefits or introducing into future accident policies features providing benefits not contained in policies that are now issued, even for an additional premium, excepting, of course, that there shall be no limit as to the amount of insurance that may be granted under the suggested form of contract so long as the basic rate of $5 premium for $1,000 principal sum and $5 weekly indemnity is adhered to.

13. That companies shall be privileged to give full coverage for automobile accidents for an additional premium of not less than $2 for each $1,000 principal sum and $5 weekly indemnity, and that a premium of not less than $1.20 per $1,000 death and dismemberment policies shall be charged.

CANADA'S LIFE COMPANIES ABROAD

Ten Institutions Do a Fairly Large Business Outside the Dominion—Latest Official Statistics

Several Canadian life insurance companies are transacting business in foreign fields. Besides writing business in Great Britain and the United States, Canadian policies are known as far away as China and Japan. They are held also in Panama, India, Cape Colony and even in Egypt and Siam.

Around the World.

The following tabulation gives the names of the enterprising companies doing business abroad and the names of the countries and states in which they are writing it:—

Canada Life Assurance Company; the States of Illinois, Michigan, Minnesota, Ohio, Pennsylvania and Washington in the United States of America; Great Britain, Newfoundland and Bahamas.

Confederation Life Association; Great Britain, Newfoundland, Ireland, Mexico, Jamaica; Trinidad; Cuba; Canal Zone and Costa Rica.

Federal Life Assurance Company; Eastern Asia.

Great-West Life Assurance Company; State of North Dakota.

Imperial Life; Newfoundland; British West Indies; Dutch Guiana; British Guiana; Costa Rica; and Porto Rico; Guatemala; San Salvador; Nicaragua.

Manufacturers Life Insurance Company; Newfoundland; Great Britain and Ireland; Egypt; Transvaal; Cape Colony; India; Ceylon; Siam; Straits Settlements and Federated Malay States; Java; Sumatra; Hong Kong; China (Treaty Ports); Philippine Islands; Japan; Bermuda; Barbados Jamaica; Puerto Rico; Trinidad; Cuba; Curacao; Grenada; Panama; Costa Rica; Dutch Guiana; British Honduras; Mexico; Santo Domingo; Pennsylvania; Illinois; Michigan; Ohio.

Mutual Life Assurance Company of Canada; Newfoundland.

National Life Assurance Company of Canada; British West Indies.

North American Life Assurance Company; the States of Illinois, Michigan, Pennsylvania and Washington in the United States of America; Bahamas; Bermuda; West Indies and Newfoundland.

Sun Life Assurance Company of Canada; Great Britain; Newfoundland; Bermuda; Bahamas; West Indies; India and Burma; Ceylon; Straits Settlements; Egypt; Asia Minor; United States; (Hawaii), Maryland, Michigan, New Jersey, Pennsylvania, Puerto Rico, Virginia, Philippine Islands; Cuba; China; Japan; Belgium; Chile; Mexico; Central America; Java; Colombia; Peru; Manchuria; British Guiana; Dutch Guiana, Siam.

Results of Foreign Business.

Here are the figures of these ten companies regarding their foreign business for 1911, the latest year for which official statistics are available:—

Premiums for year	$ 1,793.392
Number of policies new and taken up	13,862
Amount of policies new and taken up	26,297,227
Number of policies in force at date	88.944
Net amount in force at date	157,114,897
Number of policies become claims	1,101
Net amount of policies become claims	1,805,932
Claims paid	1.722.948
Unsettled claims not resisted	571,935
Unsettled claims resisted	52,075

Managements and field forces have many similarities If a management be obsessed by a desire for "volume," you may depend upon its field workers becoming saturated with the same idea and quality is sacrificed to that end. If a management be lax and easy-going, its representatives, chameleon-like, reflect the same characteristics in their work. If a management be ultra-conservative, its field workers assume a "holier-than-thou" manner, which is sometimes aggravating, but always amusing. If a management be reckless, it will attract representatives who are irresponsible or worse. If a management be virile, tempered with good judgment and considerate, it will attract able, earnest and conscientious field workers to its service.
—I. M. Hamilton, Chicago.

WISCONSIN'S STATE INSURANCE IN OPERATION

Conducted on Same Basis as That of All Sound Line Life Companies—Usual Forms of Policies

The Wisconsin legislature of 1911 authorized the issue of policies of life insurance and annuity contracts by the state through the life fund without responsibility on the part of the state beyond the amount of the fund.

Under this authorization the State of Wisconsin began business of life insurance on October 24, last year.

The Wisconsin act aroused wide interest, not only throughout the state and in other states, but also in Canada and other countries.

By the act the insurance department was allowed two years in which to put the system into operation, and the department has prepared forms of applications and policies, schedules of premiums, tables of costs of insurance and reserves and other data and forms for carrying out the provisions of the law.

An explanation of the life fund of the State of Wisconsin, with tables and forms of policies, was issued by the commissioner of insurance, Mr. Herman L. Ekern.

The pamphlet stated that the State of Wisconsin was prepared to take applications for insurance in the life fund. The first policies were issued simultaneously as soon as a sufficient number of applications were approved.

Certainty in Fulfilment of Contract.

Absolute certainty in the fulfilment of the contracts is the first consideration. A mathematical reserve is provided for on the safest basis in use by American life insurance companies. Provision is made for a death rate corresponding with the American Experience Table of Mortality. The reserve is required to earn interest at 3 per cent.

Applicants must be between ages 20 and 50, inclusive, and may choose any of the following plans: Ordinary life, twenty payment life, ten year endowment, endowment at age 65, or term to age 65.

Medical examination is required under the supervision of the state board of health. Only normal healthy lives can be accepted.

Other plans of insurance and classes of risks and annuities are to be provided for in the future.

The Wisconsin commission issued an explanation of how the life fund of that state was to be administered. The advantages expected to be realized by this fund were thus set forth:—

It is absolutely sound.

The element of profit is done away with.

There are no agents' commissions to be paid.

The cost of operation is the lowest possible.

No Management Charges.

There are no overhead charges for officials and management, only clerical help being paid from the life fund.

The addition for expense is small, especially in the endowments, which makes this simple means of saving advantageous to the insured.

Application for insurance may be made at home through local offices or sent direct by mail.

Premiums may be paid at home through local offices or the insured may retain one per cent. for sending them direct.

The insured may borrow from or withdraw his reserve to the full limit of his credit. There is absolutely no forfeiture.

Premiums not paid when due are charged against the credit so long as it lasts.

The insured may allow his premium, after the first, so be charged as a loan where the reserve is sufficient, and pay it semi-annually, quarterly or monthly.

Usual forms of Policies Offered.

The insured may pay as much and as often as he pleases towards premiums to become due in the future, and is allowed the rate of interest actually earned on all payments to his credit for one year or more.

Dividends may be left in the funds to draw interest on the same basis.

The usual forms of policies are offered.

The insured may take an endowment maturing at age sixty-five, when he will need the money for his own support in his old age.

He may take a term expiring at age sixty-five, when he ordinarily has no earning power to protect by indemnity against death and often has other estate or has no dependants.

Gains and savings, or so called dividends, are paid at the end of the first year and every year after.

The insured may change his policy to any other plan.

It keeps the money at home where it will be invested.

On same Basis as Sound Life Insurance.

It is to be conducted on the same basis as all sound old line life insurance.

It is done in daylight with all the facts before the insured.

It brings home an understanding of all insurance.

It gives the insured an added interest in the honesty and efficiency of his state government, which will make it better all around.

It is the stepping stone to annuities to protect old age and perhaps to solving other economic and industrial problems.

It will increase confidence in life insurance and encourage the extension of its protection to every resident of the state and will increase the business of sound companies and societies.

◆

TORONTO'S FIRE INSURANCE.

The city of Toronto last year renewed the fire insurance on civic property for three years. The amount placed was $3,661,258, the rate 2 per cent., making the premium $73,286. The growth of the civic insurance since 1891 is shown by the following table:—

Year.	Insurance.	Rate.	Premium.
1890	$ 542,810	1½ %	$8,142
1894	636,980	1½ %	9,554
1897	650,267	1¾ %	11,379
1900	696,083	2¼ %	15,661
1903	1,773,913	2¼ %	39,913
1906	2,334,570	2¼ %	52,527
1909	3,012,000	2 1-10 %	63,252
1912	3,661,258	2 %	73,286

In 1891 the estimated value of the city's insured property was $1,472,175; in 1912 it was $7,692,887.

◆

The National Board of Fire Underwriters and the National Protection Association have prepared and adopted suggestions with respect to legislation and municipal ordinances, which if put into force in Canada would do much to lessen our fire hazard.

Last year was one of the worst ever experienced by marine underwriters, and since the beginning of January the loss occasioned by the more important shipping casualties amounted, for the greater part of the year, to over $30,000,000. There were 4,241 total and partial losses, weather damage being responsible for 794, stranding for 1,270, and collisions for 1,352. The liabilities of Lloyds and the companies were nearly $2,500,000, the Japanese typhoon causing most of the damage.

A statement has been prepared by M. Léon Bourgeois, the French Minister of Labor, which shows that on October 1st, 1912, the total number of workmen and peasants who had registered for old-age insurance was 7,698,856, as compared with 7,622,458 on July 1st. To these must be added 292,439 persons who are at present enjoying the old-age pension or have arrived at the age when they can claim it. The number of insurance stamps sold in the second quarter of the present year reached the value of 9,392,616 francs, while in the quarter ended September 30th last the value of stamps sold was 13,370,985 francs.

INFLUENCE OF MODERN SCIENCE AND TREND OF MORTALITY

What Has Been Accomplished in Europe and America —Actuaries' Investigations and Findings—Progressive Forces in the Ascendant

(Specially Contributed to The Monetary Times.)

A desire for long life is inherent in the human race; it is implanted deeply in the inner consciousness of every normal man and woman and is as enduring as life itself. From the earliest known times philosophers and scientists have spent much time and energy in attempts to find some means of attaining this desired end, and though to-day we look upon the philosopher's stone and the various elixirs of life as myths existing only in the imagination of their would-be discovers, we, as individuals and as nations, recognize and put into practice the principle underlying these vain researches.

Arguing from this, we would no doubt say, à priori, that there should be a steady improvement in the mortality of civilized nations. Conclusions so drawn, however, cannot always be substantiated and it will be necessary in order to prove our reasoning sound to support it by concrete proofs.

For this purpose we may consider the mortality exhibited by the following classes:—

(1) General population.
(2) Assured Lives.
(3) Annuitants.

It will be obvious that the death rate shown by these classes will differ in incidence and degree, but we may expect to find the same general tendency throughout.

When dealing with the mortality of the general population we are somewhat handicapped by the fact that only during the last fifty or sixty years has the necessary data been kept with any considerable degree of accuracy. This is particularly true of this continent and also of Europe generally (and it is with these we are chiefly concerned) though there have been certain communities where the number of annual deaths has been recorded for long periods and where the uniformity in methods of dealing with the statistics has been such as to enable one to draw dependable conclusions.

Statistics of Geneva as Example.

In the city of Geneva, for example, where the population is known to a close approximation, there has been kept for over three hundred and fifty years a record of births, marriages and deaths. Data covering nearly three hundred years has been tabulated with very interesting and instructive results. For ages up to eighty-one, each successive century shows a decidedly more favorable mortality than the preceding, the greatest improvement being for ages nought to fifty. In this group the mortality decreased one-half. As might be expected, since a larger number of survivors from the younger age groups had approached so much nearer the limit of life, the mortality from ages eighty-one to ninety shows a gradual increase, that of the seventeenth century being one-seventeenth greater, that of the eighteenth one-ninth greater, and that of the nineteenth one-eight greater than that of the sixteenth century.

The general tendency of the death rates shown is confirmed by independent data gathered from the records of other European cities, which, though not extending over such a long period, show the same trend. Dealing particularly with more recent times a paper by Mr. S. G. Warner entitled "On the Improvement in Longevity During the Nineteenth Century," is instructive. From this we derive the following approximate death rates, per thousand, from England and Wales: 1850-1875, twenty-two; 1876-1885, twenty; 1886-1895, nineteen; 1896-1900, eighteen. The death rate for the Netherlands, as reported to the Fourth International Congress of Actuaries, is approximately as follows: 1850-1859, twenty-eight; 1870-1879, twenty-five; 1890-1899 twenty-one per thousand.

Select and Aggregate Tables.

Unfortunately on this continent no satisfactory records exist for the country at large. It may safely be assumed, however, that the deductions drawn from the mortality of a number of cities, for which the death rates have been tabulated, will hold good in the broader application. These show that the death rate for the years 1889-1901 was only 75% of that for the period 1851 to 1863.

One would expect the mortality among insured lives to differ from that of the general population. In the first place each applicant is subjected to a careful examination and only those are accepted who, in the opinion of its medical board, are fit risks to be assumed by the company. To offset this medical selection is the self selection exercised by the applicant who, knowing his health to be impaired but so little as to escape detection in a medical examination insures his life on a cheaper plan and for a larger amount than the average man of his station. The effect of medical selection is lost after a few years, generally believed to be from five to ten, and mortality tables are known as select or aggregate according as the mortality during the period in which selection is presumed to operate is, or is not, shown separately.

In other words, in a select table the death rate is shown by ages at entry for durations of one year, two years, etc., while in an aggregate table the mortality is given for age attained irrespective of age at entry. Thus in preparing a select table a person insured one year before at age 29 and another four years before at age 26 would be placed in different classes, but in an aggregate table they would both appear at age 30.

British and American Investigation.

The most recent important investigation into the mortality of assured lives was that conducted by the Institute of Actuaries of Great Britain and the Faculty of Actuaries in Scotland which resulted in the compilation of the British Offices Life Tables. The resulting OM Table, an aggregate table, shows a more favorable mortality than the HM Table, which was the previous standard in Great Britain and Canada. In the United States the American Experience Table of Mortality is the standard generally in use. A few years ago an investigation was made into the mortality on special classes of risks and the results published. More recently forty-three companies in the United States and Canada have contributed their data to a joint committee representing the Actuarial Society of America and the Association of Life Insurance Medical Directors for the purpose of a mortality investigation into the influence on longevity of occupation, family history, build, personal history of impairment and habitat, the results of which are now being published. While these are not mortality tables in the general sense, it is altogether probable that the Actuarial Society of America will shortly undertake the preparation of a new table on standard lives which might supersede the American Experience and the Actuaries' Table now in use. Speaking of the results of the work already done in connection with the special investigation, the committee in charge says: "It is undoubtedly true that the American Experience Table shows a higher death rate than that generally experienced by life insurance companies," the conclusion being that the mortality among insured lives is improving. The improvement from now on will doubtless be slighter and more gradual than during the past century.

Mortality of Annuitants.

A report on the mortality of annuitants has recently been made by Mr. James Blakey, the actuary of the National Debt Commissioners of the United Kingdom, who has made an investigation covering the period from 1875 to 1903 and compared the results with those for the preceding period of 67 years from 1808-1875. It may be stated that in the case of annuitants no medical examination is necessary, but except in rare instances an annuity would not be bought did the annuitant not expect to live at least long enough to receive the purchase price of the annuity. There is thus a self-selection, opposite in character from that referred to in connection with insured lives, which operates against the company granting the annuity. Mr. Blakey's report shows that the "actual" deaths were considerably less than the "expected" deaths, especially in the case of women.

Women purchasing an annuity at 40 years of age have an expectation of 29.01 years as against 27.97 years by the former experience; while at the age of 50 the expectation is 22.21 years as compared with 21.07. In the case of men the increases are smaller but the expectation has for both sexes increased at all ages.

Conclusions of Mr. Hunter.

Mr. Arthur Hunter in a paper published in the transactions of the Actuarial Society of America, Vol. X., entitled: "Mortality Experience among Annuitants Resident in the United States and Canada," draws the following conclusions among others:—

(1) That the mortality experience among annuitants resident in the United States and Canada is very low and appears to be more favorable than any other published annuity experience.

(2) That it is lower than among those resident in Britain and the continent of Europe, which is probably mainly due to the intensified self-selection in the new world.

The evidence before us leaves little room for doubt that particularly during the last half century there has been a marked increase in the mean duration of human life both in Europe and America.

Modern Science Responsible.

This is largely due, no doubt, to the effect of modern science. A knowledge of hygiene is more general than ever before; great advances have been made in medical and surgical skill due to the researches of such men as Dr. Alexis Carrel, to whom was recently awarded the Nobel prize.

THE REMARKABLE RECORD OF CANADA'S OLDEST LIFE ASSURANCE COMPANY

ESTABLISHED

In 1847—66 years ago.

THE COMPANY'S AIM

Security and Profit to Policyholders and their Beneficiaries.
Prompt settlement of all claims.

ITS POLICIES

Extremely simple, safe and profitable. Liberal guarantees.
Practically free from restrictions.

ITS SIZE

Over $140,000,000 of assurances in force. The Company is receiving a steady inflow of applications, which will ensure it a splendid record for 1912. The greatest increase is in Canada, where the Company is best known.

ITS STRENGTH

Assets over $46,000,000, carefully distributed over a wide variety of high-class securities.

N.B.—In each of the past five years the rate of interest earned has steadily and materially increased.

ITS SURPLUS EARNINGS

Each year shows an increase in surplus earned, that for 1911, $1,293.597, being the greatest in the Company's history. Favorable mortality, a low expense ratio and high interest earnings—in other words, good management—caused this fine showing.

ITS STANDING

More than half the business in force is valued at 3%, a basis higher and stronger than is required by any Government Department on this continent. This means great earning power through the large invested funds, and with the substantial and increasing rate of interest obtained, it will ensure to Policyholders satisfactory returns on their premiums invested.

THE CANADA LIFE ASSURANCE CO.

HEAD OFFICE - - TORONTO

Considerable improvements in sanitary matters have been effected by legislation and the time is not far distant when the sanitary engineer will find a place in the economy of every up-to-date community. We, as a people, are beginning to see that an ounce of prevention is worth a pound of cure. The search for the cure for disease is giving way to the discovery of the cause of the disease and a means by which the cause may be exterminated. Undoubtedly, wherever the principles of sanitary science have been applied the length of life is increasing. In Europe it is said to have doubled in three and a half centuries. In Germany where medical and sanitary science have reached their highest development, the increase during the last century was twenty-seven years.

Struggle Between the Dollars and Death Rate.

On the other hand little or no attention has been given to the degenerative diseases of middle life and old age, and insufficient attention to the diseases peculiar to children, every one of the latter being a preventable disease according to modern medical science. Disease of the heart, blood-vessels and kidneys have nearly doubled in the last thirty years. Cancer is on the increase. The stress of modern life, the growing density of population and luxurious and vicious habits are all having a vitiating effect on the general health. A startling array of facts was given by Mr. E. E. Rittenhouse in an address to the Fourth National Conservation Congress held at Indianapolis October 1st to 4th, which should be read by everyone engaged in this line of work. He says: "In the last analysis the war against preventable disease is a struggle between the dollar and the death rate."

At the present time the forces working for better sanitary conditions and improved longevity are in the ascendant, and it is to be hoped they will remain so, but eternal vigilance is the price of safety and the safeguarding of health is a matter which should receive the intelligent and unremitting support of all who in any degree have the welfare of humanity at heart.

◆

MORE INSURANCE COMPANIES IN CANADA

Large Number of Companies Licensed by the Dominion Department Last Year

It may be an open question as to whether or not Canada is a profitable underwriting field, judged by average results. A large number of new companies, however, are being organized, and many foreign concerns are applying for permission to transact business here. Many unlicensed fire companies are writing business and probably their profits are good, especially as some of them, not complying with our law, are not bound to pay their losses.

These Were Among the Licensed.

The following seventeen companies were licensed during 1912 by the Dominion department of insurance to do business in this country:—

Companies licensed since January, 1912:—

Name of Company	Name & Address of Agent	Kind of Insurance
American Insurance Co....	Conrad S. Riley, Winnipeg.	Fire
British Colonial Fire Insurance Company	Theodore Meunier, Montreal	Fire
British North Western Fire Insurance Co.........	F. K. Foster, Winnipeg. . .	Fire
Capital Life Assurance Co.	A. Eugene Corrigan, Ottawa	Life
Firemen's Insurance Co. of Newark, N.J. .	Benj. B. Smith, Winnipeg.	Fire
Compagnie d'Assurance Generales contre l'Incendie.. . .	Jos. A. Laurin, Montreal....	Fire
Germania Fire Ins. Co......	Percy Robertson, Toronto....	Fire
Insurance Co. of the State of Pennsylvania............	Paul Von. Szeliski, Toronto	Fire
Liverpool-Manitoba Assurance Co	J. Gardner Thompson, M't'l	Fire
Mount Royal Ass'ance Co.	J. E. Clement, Montreal.	Fire and Plate Glass
Niagara Fire Ins'ance Co.	C. H. Enderton, Winnipeg....	Fire & Tornado
North West'n Fire Ins'ce Co.	Thomas Bruce, Winnipeg....	Fire
[illegible]	[illegible]	
Northwestern National Ins'ce Co. of Milwaukee, Wis..............................	Guy M. Harris, Winnipeg ...	Fire, Tornado and Hail (Limited to Provinces of Ont., Man. Alta Sask., and B.C.)
Palatine Ins'nce Co., Ltd..	James McGregor, Montreal.	Fire
Providence, Washington, Insurance Company .	Roberton Hampson & Son, Ltd. Montreal	Fire
La Sauvegarde Life Ins. Co.	Philorum Bonhomime, M't'l	Life
[illegible]		
Travelers' Indemnity Co., Hartford, Conn.............	Frank F. Parkins, Montreal.	Accident, Sickness, Steam Boiler, Fly Wheel & Automobile
Westchester Fire Ins. Co.	J. W. Tatley, Montreal.........	Fire

Applications for License.

The following companies have made application for license:—

Name of Company	Business for which license is sought.
Middlewest Fire Insurance Co.	Fire (in 3 provinces).
Delaware Insurance Co.	Fire.
Niagara Fire Insurance Co.	"
Liverpool-Manitoba Assurance Co. ...	"
General Fire of Paris	"

(Continued on page 216, second column.)

HOW FOREST FIRES ARE BEING PREVENTED

Best Class of Rangers—Telephone System to Concentrate Fighting Forces—Chief Causes of Conflagrations

"The work that the department is doing for the reclamation and the preservation of Canada's forest wealth," recently said Mr. H. R. Macmillan, assistant to Mr. R. H. Campbell, director of forestry at Ottawa, "is tremendous in its scope. Parties are at work everywhere, classifying the different kinds of country, and marking off boundaries between agricultural and non-agricultural land. This serves a double purpose. In the first place settlers need not settle in a haphazard way, to find out later that their land is unfit for farming purposes; while at the same time the classification of this land enables the government to preserve and protect timber land.

"Just now there is a party at work in the Whitemouth River country, just north of the boundary line, another in the Pasquia country, north and west of Hudson Bay Junction, one west of Prince Albert, one in the Oninu Lake country, and another in the vicinity of Kamloops. I could go on naming numerous similar parties throughout the West who are all agents in a work of far-reaching importance to the future greatness of the Dominion.

Department too Busy to Boost.

"The only reason that the outside world hears so little of this important undertaking is that the department is too busy working to have any time left for advertisement.

"We are paying special attention this year to the forest fire protection. In the Le Pas district we have a fire patrol along the Canadian Northern Railway, with experienced rangers in charge. Special care is also being taken to prevent a fire in the district along the Hudson Bay Railroad.

"Despite the comparatively small appropriation for the work, the department is proceeding on a very thorough and comprehensive scale. Only the very best class of fire rangers are being employed, and these are made to live permanently in their particular district. Comfortable cabins are being built for them, so that there can be no excuse for a man leaving his post. The site of these cabins is carefully chosen and is generally situated in the most strategic position of the ranger's district.

Telephones, and Modern Methods Used.

"The work of centralization and concentration of the fire fighting forces will be aided by the telephone system now being installed throughout the various reserves. The cabins of the rangers will be connected in this way; fire fighting tolls will be kept at each point and consequently it will be possible to check any fire within at least two hours after it may start, provided ordinary care is taken. This branch of of the work is being supplemented by the cutting of roads and trails, so as to make the forest reserves easily accessible. With careful patrol work and these aids there is no reason why forest fires should not be, as they probably will be, reduced to a minimum."

Camp Fires Largely Responsible.

With such an organization and the regulations drafted by the railway commission for the prevention of bush fires much damage will be prevented and valuable timber saved.

But the following note in the latest Dominion Topographical Surveys Report is especially interesting, and adds much proof to The Monetary Times oft repeated assertion that much of Canada's fire loss is preventible and due to carelessness, criminal carelessness. In his report on a survey of part of the fourth meridian, Mr. J. N. Wallace, D.L.S., remarks after deploring the devastation of forest fires in the northwest:

"While no doubt there are a few other causes of fires in the north, the main cause is a camp fire left smouldering. The average traveller in that country knows enough to keep a fire under control when he is lighting and using it, but he does not know enough to see the necessity of extinguishing it when he is done with it. The cases where a man cannot extinguish a fire for want of water or for some other cause are very few. The cases where when he is leaving he looks back at the half extinguished fire, knows there is a risk, but deliberately chances it, are very common; and such cases are not due to laziness, but are often due to that fault of character, especially common in the northwest, which thinks it a weakness to take precaution against a danger rather than to risk its occurring."

The Sovereign Life Assurance Company of Canada during the year 1912 has made wonderful progress. Large increases have been made in the assets of the Company, its interest earnings, and its premium income.

At the close of October, 1912, considerably more business had been written than the Company had previously received in any one year since its organization.

FIRST IN CANADA'S FIRE INSURANCE FIELD

Reminiscences of Pioneer Underwriters — Problems and Responsibilities Mark Modern Times

BY JAMES HEDLEY

A correspondent in the far West of Canada, formerly resident in the East, favors *The Monetary Times* with an interesting suggesting. It concerns Canadian fire underwriters of a by-gone day. He is of the opinion that "the group of good men who comprised what might properly be termed the pioneers of fire insurance in Canada should not be allowed to pass away from the scene or to become mere individual memories without some memorial or collective public record worthy of them." In this idea *The Monetary Times* concur most heartily.

In preparing any such record it is well to bear in mind the difference between the conditions of business in the days of 1860 and those of the present day. Personality counts for much, but training and surroundings, besides the commercial conditions of underwriting must be allowed for in contrasting the men of two eras.

JAMES HEDLEY.

The gentleman who writes, and who knew every fire insurance manager of any prominence from 1860 to 1890, is insistent upon the claim to remembrance of the first and last group of what he terms gentlemen underwriters. These men were, for the most part, old-fashioned enough to observe mutual confidence in their dealings with one another.

Well and Worthily Known.

Among those cited as worthy to stand on the roll of conscientious business men and competent underwriters were G. F. C. Smith, of the Liverpool and London and Globe (of whom more presently); Thomas Davidson, of the North British and Mercantile; H. L. Routh, of the Royal; followed by Matthew H. Gault, who preceded Mr. William Tatley, the placid A. T. Paterson, of the Phoenix; Heber Rintoul, of the Imperial; the courtly Romeo H. Stephens, of the London; Robert Wood, of the Aetna; Taylor Brothers, of the Northern; Alex. M. Forbes, of the Queen. These were general managers or chief agents, and resident in Montreal, where also lived that fine and universally known veteran Mr. William Ewing, inspector for the North British and Mercantile, and Mr. James Spiers, a valued official of the Liverpool and London and Globe. The smooth, peacefully disposed Robert Wood, of Montreal, for example, differed widely in manner and speech from his blunt and often provoking nephew "Tom," of Toronto. Yet T. R. Wood was a man of sincerity and honor, and built up a large business for the Aetna and, later, the Home.

It is interesting to know that Mr. G. F. C. Smith who has 53 years of insurance service to his credit, takes pride, as well he may, in having been one of the originators (charter member, so to speak) of the Canadian Fire Underwriters' Association, of which he was president for the first four years of its existence. He was responsible too, we believe, for the introduction into Canada of Insurance Plans prepared by Sanborn, of New York, and afterwards by C. E. Goad. Who would be without these plans at the present day? Honorable mention might be made in more detail, did time permit, of others of these named, who have done good work for fire insurance.

Something That Might Be Learnt.

These men were by no means of one type or of similar temperament. It is hardly fitting that we should quote all the interesting informant says in warm praise of the leading doers of former days in the insurance field. The Qaudator Temporis Acti is often extreme. Human nature being imperfect at the best, it is impossible but that flaws might here and there have been found in the administration of some of these men of those famous days. But it is undeniable that as a group of representative underwriters in the formative stage of a business which has grown to immense proportions they showed a truthfulness, a mutual confinence, and a scorn of trickery that may well be commended to some grasping, over-reaching members of the Guild, who seem disposed at the present day to sacrifice gentlemanliness and accurate underwriting to the chances of money-making by methods certainly not to be admired. To use a familar insurance term—they "get the risk."

Conditions Transformed and Risks Increased.

During the period under observation in the reminiscences, circumstances in commerce, transportation, and insurance were very different from those of to-day. Confederation of the provinces had not yet become the binding tie it was intended to be; the great Canadian West was unknown, and the business field was comparatively restricted. Especially was insurance competition less keen, and friendly relations and generous treatment one of another were therefore more easily maintained. It is not too much to say, besides, that the fire insurance system of that day was less complete, less scientific and minute than now. As the field of insurance widened the character of risks became more varied and the safeguards for the underwriter more rigid as well as more diversified. The perfecting of the sprinkler system made a vast difference in manufacturing hazards; the development of electricity for light and power and the adaptation of insurance rates to these purposes; also the modification of relations between insurer and insured consequent upon the adoption of the co-insurance clause brought about a transformation of insurance conditions and enormously increased the volume of risks.

When it was Toronto Village.

A further list is supplied by our contributor of old-time representatives in Quebec, Toronto, Hamilton, London. In the Ancient Capital, well-remembered names are those of Mr. Charles Champion, of the Royal; Mr. Thomson, of another Old Country company; and Mr. J. G. Clapham, president of the Quebec Insurance Company, "an old-Englishman of the right sort."

The growth of Toronto, in the years 1865 forward—those were the narrow-gauge railway days—was great from the "pretentious straggling village," which some strangers of those days thought it. And as its insurance business grew the managers of that business grew with it. Mr. R. N. Gooch, the respected manager of the North British and Mercantile, ann Mr. Bernard Haldan, of the Western, a very honorable man, are among the first to come to mind.

"Do not omit," says a well-known and generous Montreal underwriter who was consulted about these reminiscences, "to mention a group of three among your Toronto men: that paragon of uprightness and gentlemanliness, T. W. Birchall, of the old British America, followed in that company by the respected and able F. A. Ball. During the incumbencies of both, that fine man, George Percival Ridout, was president of that company, which was founded in 1833." There were, too, William Henderson, of the Hartford; S. C. Duncan-Clark, manager, and William Blight, inspector, of the Lancashire; Hugh Scott, representing several British and an American company; James Fraser, of the Liverpool and London and Globe, and his successor, Joseph B. Reed; Alfred W. Smith, of the Northern and Imperial, and now the Alliance; John Maughan, jr., long of the Royal, and to-day with the Hartford, watched and helped the advancement of fire insurance. The name must be added of George McMurrich, of whom a Montreal admirer says, "He was always

relied upon to do the straight thing; we found him a sterling fellow."

An outstanding figure for many years was Hugh Scott, whose splendid appearance and plain-speaking habits fixed him in the memory of anyone who had ever met him. When quite young he represented in Canada first the Western of England, and afterwards the National of Ireland. His bold and very advanced ideas, notably a strong adherence to the mutual principle in underwriting, made him a figure to many on the boards of earlier days. But between the years 1872 and 1886 Scott and Walmsley founded four companies which are still doing a steady business, largely on the mutual plan.

Of the insurance men of Canada, old or young, few did more notable work and none was more beloved in his day and generation than J. J. Kenny. A clerk in the office at Hamilton, he was transferred about 1875, by the Western to Toronto. Here he went through every stage of the profession and grew with his responsibilities. He received the management of the British America as well as the Western, and proceeded to build up an astonishingly large business, especially in the United States, where he was greatly esteemed, both for his ability as an underwriter and for attractive personal qualities. But three conflagrations within a few years, which tried his companies severely, seemed to break his spirit and he retired to a limited district on the Pacific Coast to die.

We consider it not without aptness that Mr. Alfred W. Smith, of the Alliance, has been termed, referring to his exploits at board meetings, the Rupert of Debate. Because—

"Nor loss nor toil his freshness can destroy,
And time still leaves all Eton in the boy;
First in the class and keenest in the ring—
Even at the feast his pluck pervades the board."

Despite an often blunt manner and a tongue with a Sheffield edge, he is by no means devoid of sweet reasonableness. Mr. Smith has many friends and has had his full share of the responsibilities, as well as honors, of the board.

An old-timer's reminiscences can hardly omit Alfred Perry, that strange embodiment of energy; now passionate, now saturnine, whose blood seemed to have in it strains of English, French, Welsh, Indian, with the Celtic uppermost. In later years he did not appear to advantage as an underwriter, but he was a terror to incendiaries, a perfect demon as a fire-fighter in Montreal.

Hamilton and London Names.

A fine type of man was George Denholm, known long since and remembered in Hamilton as a wholesale merchant. He went to Montreal forty years ago, and was there along with Robert Simms, agent for the Guardian. But his reputation as either merchant or insurance man was obscured by his greater fame as a curler. George A. Young, a precise and excellent man, who died last year, was many years agent for the Royal in Hamilton. More recently he held a position as rating officer for the Board companies. Well deserving the title of an old-timer is Mr. Seneca Jones, of the Ambitious City. We do not know his years, but his renown is lasting. The Grand Old Man of Hamilton, Hon. Adam Brown, turns out to have belonged, years ago, to the insurance fraternity. While yet a clerk in a wholesale house, he was appointed by his former employers, Gillespie, Moffatt & Company, of Montreal, agent in Hamilton for the Phoenix, of London. This position he relinquished in favor of George H. Gillespie, who held it for a long time. A stalwart agent of the old school was Robert Cunningham, of Guelph.

London does not furnish many names to the list, but one outstanding is that of F. B. Beddome, of pleasant memory. He was the first agent appointed in that place by the Western, who pensioned him and his widow after him. James Durand, a familiar name, was more of an insurance adjuster than an agent. He was unsurpassed in his time as an adjuster.

Canadians Are Not Careful of Fire.

The originator of the present article, Mr. Henry Lye, now resident in Vancouver, has had an unusually long and rare career as an insurance adjuster. To great natural perspicacity he added a knowledge of underwriting and a deep knowledge of accounts, and was concerned in various large transactions in banking and insurance. If length of days are granted to Mr. Charles D. Cory, one might soon properly address him as Dean of the group of Eastern accountants, since Mr. Lye appears to have become a permanent Westerner.

The more modern successors of the men already mentioned had the duty of carrying forward the banner of insurance protection. And with the country's growth the demands upon underwriters grew in extent and variety. Canada is well served now by its underwriters, who are alive to the duties and responsibilities of their business as well as to the claim it makes upon them for its proper up-keep and demonstration.

Canadians are, as a rule, extremely careless of fire, and though the country's statistics show perhaps the largest per capita destruction in the world of property by fire, it has long seemed impossible to convince the people that their negligence of habit with respect to fire-risk takes a dreadful toll in property and human life. Some outstanding efforts have been made to bring home the fire-waste to the Canadian people. The Fire Commissioner of Manitoba has been unceasing in his efforts to keep the matter before the public of his province. The boards of underwriters in Montreal and Toronto have given the benefit of their experience to the public; the Ontario mutual fire underwriters have long impressed the dangers of fire upon their clients. And among individuals giving valuable service in this direction, Mr. John B. Laidlaw, of the Norwich Union, and Mr. Randall Davidson, of the North British and Mercantile companies deserve honorable mention.

LIFE INSURANCE DEFINED.

Life insuranuce makes a scientific adjustment between the possibilities and the probabilities, the accidents and averages of life. It enables the individual to merge his constant liability to death in the average longevity of the race, and to share in the productiveness of life in general; whatever may be his own fate. It discounts probability and gives certainty. In its adaptations to practical life and finance, life assurance enlists the cumulative power of small investments through long periods of time, and utilizes the far-off interest of prudence for present needs. It applies scientific methods to those impulses of generosity which would otherwise encourage improvidence and provides for the needs of all through the love of each for his own. It gives affection a place to stand, and a lever with which to work. It transforms forethought and good will into practical helpfulness and well being. It enables us to realize for our loved ones the hopes we cherish for their future, which might otherwise be blighted by death.—Mr. John C. McCall.

MORE INSURANCE COMPANIES IN CANADA

(Continued from page 212.)

Mount Royal Assurance Co.	Fire and plate glass.
United Commercial Travellers of America	Accident.
Western Canada Accident and Guarantee Co.	Accident & Guarantee
Loyal Protective Insurance Co.	Accident and Sickness (in 5 provinces).
Mutual Life & Citizens Assurance Co. of Sydney, N.S.W.	Life.
La Sauvegarde Life Assurance Co.	"
Detroit Life Insurance Co.	Life (in 2 provinces).
Beneficial Life Insurance Co.	Life.

These were being considered by the Department when this information was received by The Monetary Times. The Nord-Deutsche Insurance Company is considering the Canadian fire underwriting field.

The following companies gave notice of intention to apply for Dominion incorporation:—

Western Union Fire Insurance Company, Vancouver.

Retail Merchants Fire Insurance Company desire incorporation under the name, of The Security National Insurance Company of Canada (head office, Winnipeg).

Provident Accident & Guarantee Company, Montreal.

Imperial Underwriters' Corporation, Vernon, B.C.

One Company Made Its Exit.

The Canadian Guardian Life Insurance Company was incorporated by the Province of Ontario under the name of the Central Life Insurance Company. A Dominion license was issued to it May 20, 1905. Its name was changed March 1, 1907, to the Canadian Guardian Life Insurance Company. Its Dominion license having expired on May 1st, 1911, it was not deemed expedient to renew the same but with a view to enabling the company to procure a surrender of its outstanding policies or a reinsurance thereof in same company licensed in Canada under the Insurance Act 1910 a limited license was issued to it authorizing it to collect premiums due and to become due upon the policies outstanding and in force at the date of said limited license and to pay claims arising thereon and to transact all business appertaining thereto and to do all things necessary for the protection of the holders of policies, but without the right to transact new business. The limited license expired on March 31st, 1912, the company in the meantime having procured the surrender of some of the policies. None of such policies were, however, reinsured in a company licensed under the Insurance Act. The company gave notice of an application for the release of its deposit on July 15th, 1912, and the proceedings prescribed by the Insurance Act were taken for the payment to holders of policies still in force of the surrender values of their respective policies.

Many provincial companies were organized last year.

MENACE OF FIRE INSURANCE SPECULATION

So-called Valued Policy Law Places Premium on Dishonesty—Question of Sound Indemnity

No government desirous of lessening the destruction of property by fire should place or permit to remain on its statute books a law which puts a premium on the destruction of property. Such a law would be bad enough if it were certain that a fire would be confined to the property on which it originates, but in the light of the possibility, not to say the probability, of its spread to the property of others and the consequent destruction of human life, it becomes an enormity that should not be permitted to exist.

Eliminating all considerations of the tendency to encourage crime with its attendant destruction of life and property which such a law embodies, and viewing the matter from a cold commercial standpoint only, it seems that there can be but one conclusion as to the value of an enactment of this nature. The experience of every government having such a law, is that premium rates have advanced in its wake. This is the logic of the situation. Human nature is such that no government can, by legislation, make it an object for its citizens to permit their insured property to be destroyed by fire and escape the development of property owners who will take advantage of the opportunity afforded to make their property earn them a profit. These are the statements of Mr. A. B. Barry, formerly insurance commissioner of Michigan, and well known in Canada.

Valued Policy Law.

Then, too, he continues, with the opportunity to collect in the name of the law greater values than those destroyed by fire, what incentive is there for the property owner to exercise watchfulness and care in guarding his property from fire? Such enactments involve the country in a two-fold loss. They result in the greater destruction of property which should be preserved in the interest of the country and in increased exactions from its people in the shape of higher premium rates. From every standpoint the valued policy law, so-called, is, a delusion, and a menace to those in whose fancied interest it is enacted. Every consideration of justice and economy condemns it.

It is contended by the advocates of this law that the insured should receive all the insurance he pays for, but it should be remembered that it takes two to make a contract and each party should be held to strict honesty in its execution. It is a monstrous doctrine that a person who deliberately misrepresents the value of his property and thereby succeeds in over insuring it should be permitted to materially profit by his wrongdoing in this respect, even though the transaction be not further characterized by deliberate crime in connection with the destruction of the property.

This is a practical question which should be treated by legislatures in a practical way. It is patent that from the very nature of the business and the necessary handling of it through the agency system, it is impossible for companies to be everywhere represented by experts in values of every name and nature.

The valued policy law places a premium on dishonesty and disaster. A law-making body should be the last to lead the citizens into temptation.

But ignoring the moral question involved, it is worse than folly, for a government to encourage a system which experience has shown results in the increased destruction of property which should, in the interests of the people, be preserved, and in the increased cost of insurance.

Cannot Return Nation's Wealth.

Rather than make it possible for its citizens to profit by the destruction of their property by fire, it were far better for the government, through legislative enactment, to require such citizens to carry a percentage of their own risk. This would insure the exercise of greater care and precaution against fire, and necessarily tend to materially reduce the destruction of property.

Insurance can mitigate the loss of the individual, but it cannot return to the nation's wealth what fire has destroyed.

The government should address itself to the treatment of this great question of fire waste just as it would to any other menace which threatens the people. It should gladly co-operate with every agency which in any wise seeks to prevent fires and decrease the alarming proportions of the country's annual ash heap. It should be as active in its efforts to stamp out this great agency of destruction of the lives and property of the people as it is in preventing the spread of an epidemic of disease which demands its toll of human lives alone.

In whatever effort the government may make, through legislation or otherwise, to control this great and costly evil, it should recognize in the fire insurance companies which supply the commodity so absolutely essential to the business of every community its most potent friends and allies. It should recognize the fact that it is dealing with its own citizens, for it is they in the last analysis who pay all the freight. This is too often lost sight of by lawmakers who fancy that they are treating with some far away hostile interest which can be handicapped and burdened in its operations to the benefit rather than to the positive detriment of the people of their own state. Legislators should understand that whenever they unduly burden or unjustly harass a company they are simply placing a burden upon those of their own constituents who are obliged to purchase fire insurance. There is no one else to carry the burden or pay the tribute.

Fire Insurance Companies Have Been Potent Factors.

Instead of being handicapped by unwise legislation, these companies should be encouraged in every legitimate undertaking. In all that they do to lessen the hazard, improve conditions and educate the public to an appreciation of its duty to do everything in its power to reduce the enormous fire waste which now constitutes such a drain on the resources of the country, they should have the encouragement and co-operation of all right minded citizens and of all law making bodies, national, state and municipal.

Fire insurance companies, through their perhaps selfish efforts to decrease the fire waste, have been the most potent factor in such improvements as have been made by methods of construction and fire protection, and new efforts in this direction are constantly being put forth by them. In this work they are entitled to and should receive the heartiest co-operation of the public, lawmakers and supervising officials. Every accomplishment in this line will inevitably reduce the cost of the indemnity they have for sale, to the mutual benefit of the companies and the insuring public.

In so far as co-operation on the part of the companies tends to enable them to better instruct the insuring public as to existing dangers and the best methods of reducing them to the minimum and to minimize the expense of making necessary inspections, surveys, experiments, etc., which are so essential to the proper and economical conduct of the business, the state should interpose no obstacle, but should give the work its full and complete sanction. Every dollar well spent in this connection means a saving of material resources and a further saving to every citizen who is a purchaser of fire insurance contracts. It is far less expensive from the standpoint of the policy-holder to have all the companies contribute to the expense of conducting the various branches of this work than it is to compel, through unwise legislation, each company to carry it on at its own expense, thus making it not only a greater financial burden, but at the same time less perfect in its results, because of each company being dependent on its own experience rather than on the combined experience of all companies in the field. No careful, intelligent business man will purchase the contract of any company which does not give careful attention to these essential details of the business, for such a company is simply plunging about in the underwriting sea without chart or compass and is sure to be, sooner or later, stranded on the rocks which constantly menace it.

Should Foster Co-Operation.

In order to foster and encourage co-operation for the legitimate purposes outlined above, it is not necessary for the government to countenance combinations in restraint of trade or any compact which has for its purpose the fixing or maintenance of rates of premium. Having in mind only such legitimate undertakings of the company as can best be conducted through united action and which tend, through the better classification, construction, inspection and improvement of risks and the determination by experts of the proper charges to be made for defects and the proper credits to be allowed for improvements to reduce the fire waste and consequently the cost of insurance. It is inevitable that the rates of premium will decrease with the decrease in the number and extent of fires and the expense of conducting the business. The gainers from this will be that portion of the public which purchases fire insurance, just as that portion is called upon to pay the cost of every burden and unwise exaction placed upon the business.

The paramount obligation of the government in connection with fire insurance is to see to it that the public is supplied with sound indemnity. It is more essential that the government exercise its authority to the end that the companies authorized to transact business within its borders are possessed at all times of sufficient funds to enable them to pay their losses, whether these losses are normal or those precipitated by a great conflagration, than to undertake, through a mistaken sense of its obligations to its citizens, to force a temporary reduction of rates at the expense of the solvency of these companies. The company that fails to collect an adequate rate is a far greater menace to the public than the one which shows, what to the unthinking mind, is an abnormal surplus. The one proves to be a broken reed in time of stress, while the other is ever a staff which furnishes unfailing support in time of greatest need.

RECOGNITION

A Policyholder of the Great-West Life—well satisfied with his maturing settlement—wrote to the Company :—

> " Your Company is certainly entitled to the recognition it is receiving at the hands of the insuring public."

Twenty successful years endorse his statement. And 1912—the twentieth year—most emphatically of all.

(1) Applications for the year have averaged well over $2,000,000 a month.

(2) Total applications exceed any previous year by well over $7,000,000.

(3) The year ends with a business in force of over $82,000,000.

(4) Over 40,000 Policyholders are protected—an increase of over 6,000 for the year.

(5) For the sixth successive year The Great-West Life is first of all the Companies for Canadian Business.

And the cause of this decided "Recognition" is

RESULTS TO POLICYHOLDERS

The 1913 results are now in print. Ask for a copy and observe what "the best in Life Insurance" really means.

THE STRONGEST CANADIAN NON-BOARD COMPANY

HEAVY FIRE LOSSES CONTINUE

Total for Previous Year Was Exceeded—Per Capita Waste is Over Three Dollars

Fire waste in Canada continues as one of the blots on Canada's economic escutcheon. According to the carefully compiled register of fire losses of The Monetary Times the losses during 1912 amounted to $22,900,712 as compared with $21,459,575 in 1911.

The following are comparisons of other features of the fire waste:—

	1911.	1912.
Average monthly loss	$1,788,298	$1,908,393
Loss per capita	$2.98	$3.05
Fires with damage of $10,000 or over	286	318

Here are the $10,000 and over fires, month by month last year:—

Month.	No. of fires.
January	51
February	19
March	30
April	20
May	34
June	27
July	23
August	19
September	16
October	24
November	18
December	37
	318

Four Years' Record.

The following are the monthly totals of the losses by fire in Canada during 1912, compared with 1909, 1910 and 1911:—

	1909.	1910.	1911.	1912.
Jan.	$1,500,000	$1,275,246	$2,250,550	$3,002,650
Feb.	1,263,005	750,625	941,045	1,640,153
March	851,690	1,076,253	852,380	2,261,414
April	720,650	1,717,237	1,317,900	1,355,055
May	3,358,276	2,735,536	2,564,500	2,251,815
June	1,360,275	1,500,000	1,151,150	4,229,412
July	1,075,600	6,386,674	5,384,300	1,741,371
Aug.	2,582,915	1,667,270	920,000	1,164,760
Sept.	1,615,405	894,125	1,123,550	883,949
Oct.	2,208,715	2,195,781	580,750	1,416,218
Nov.	935,191	1,943,708	1,506,500	1,184,010
Dec.	1,433,813	1,444,860	2,866,950	1,769,905
	$18,905,538	$23,593,315	$21,459,575	$22,900,712

Structures and Buildings Destroyed.

The following is The Monetary Times list of structures burned during 1912, with comparisons:—

	1910.	1911.	1912.
Dwellings	675	430	602
Barns and stables	351	238	243
Stores	332	291	241
Hotels, etc.	89	45	82
Factories	133	120	105
Business sections and blocks	50	65	56
Warehouses	68	75	52
Elevators	30	9	14
Banks	12	3	6
Offices	19	30	27
Schools and colleges	20	10	17
Mills	35	34	23
Churches	29	27	19
Pool rooms	4	1	6
Stations	15	6	6
Theatres	7	5	5
Hospitals	5	6	6
Garages	7	10	14
Asylums	2	1	2
Moving picture shows	5	6	3
Section houses	2	2	.
Post-offices	3	2	5
Boat houses	4	28	15
Sheds	16	40	20
Laundries	10	3	9
Engine houses	4	2	4
Power houses	3	4	8
Halls	9	5	4
Brick and lime kilns	3	1	2
Foundries	17	2	9
Machine shops	12	4	5
Saw mills	38	27	16
Steamers, etc.	17	1	10
Blacksmiths' shops	8	8	4
Granaries	2	2	.
Boiler rooms	3	3	1
Slaughter houses	2	1	3
Gasoline launches	13	32	24
Roller rinks	5	1	.
Villages	10	14	5
Newspaper offices	3	2	8
Restaurants	5	10	12
Town sections	2	4	.
Canneries	3	3	.
Lumber camps	6	4	2
Lumber mills and yards	15	10	10
Skating rinks	3	2	2
Mining plants	2	5	6
Tannery	2	3	1
Cabins	.	4	.
Apartment houses	.	2	4
Ice houses	..	2	3

In addition to the above, the following buildings, etc., were burned last year:—20 buildings (various), 10 evaporating plants, 12 repair shops, 4 round houses, 2 dyeworks, 3 pavilions, 3 club houses, 2 greenhouses, 2 street car barns, 2 cooperages, 1 sanitarium, 1 biological building, 1 barracks, 1 bindery, 1 police post, 1 pump works, 1 grand stand, 1 art gallery, 1 bridge, 1 fire hall, 1 rescue home, 1 brick yard, 1 stock yard, 1 telephone exchange, 1 exhibition building, 1 briquette plant, 1 abbatoir, 1 armory, 1 monastery, and 1 nunnery.

An Interesting Compilation.

During the past year The Monetary Times compiled the following list of the animals and miscellaneous goods which were destroyed by fire:—Horses, 184; 154 cows, 10 calves, 911 chickens, 59 pigs, 50 turkeys, 200 quintals codfish.

Bushels of wheat, 110,506; 11,800 bushels oats, 3,750 bushels barley, 8,000 bushels flax, 50 bushels timothy, 40 bushels millet, 976 tons hay, 20 stacks of straw.

Bushels of apples, 16,000; 5,000 loaves bread, carload of lemons, 200 tons potatoes, 4 locomotives, 212 street cars, 81 automobiles, 32 freight cars, 2 sleeping cars, 1 baggage car, 8 boats, 6 barges, 2 tugs, 2 cabooses.

Feet of lumber, 1,830,000; 1,000,000 laths, 12,000 pieces of barrel heading, 500,000 staves, 60 cords wood, 100 cheese boxes, car load of shingles, 8 sleighs, 10 buggies, 6 threshing machines, 3 grain choppers, 2 pulpers, 4 seeders, 5 mowers, 2 miles fence wire, 5 wagons, 980 rifles, 100 revolvers, 1,500 pairs boots, ¼-ton dynamite, 1 gasoline container, 4 tents and one aeroplane.

Causes of Fires.

The following is a list of the causes of fires last year, with comparisons:—

	1910.	1911.	1912.
Electrical defects	40	37	50
Lamps and lanterns upset and exploded	67	64	62
Defective and overheated stoves and furnaces	118	93	60
Sparks from engines, chimneys, etc.	37	34	53
Candles, tapers, etc.	8	8	6
Defective and overheated pipes, chimneys, etc.	59	53	68
Smoking cigarettes, etc.	6	8	10
Forest, bush and prairie fires	98	30	14
Live coals	5	8	16
Lightning	116	95	50
Incendiarism	70	65	86
Playing with matches	33	42	50
Gasoline and gas explosions	28	21	50
Spontaneous combustion	20	28	28
Burning rubbish	12	4	9
Tramps	20	8	4
Rats and mice	9	15	5
Cigar and cigarette stubs	13	18	9
Thawing out pipes	7	2	4
Hot box	3	4	1
Oil stoves upset and exploded	7	4	13
Fireworks	6	.	1
Defective gas stoves and hot plates	5	9	6
Bonfires	3	2	3
Gas jets	2	..	7
Explosions	2	10	2
Overturned heaters	2	2	.
Gas heaters	2	1	..
Grease and oil	3	2	5

Other causes and number of fires therefrom were:—Friction, 8; chemical action, 2; thawed dynamite, 1; asphaltum ignited, 1; engine backfiring, 6; tar, 2; alcohol, 2; resin pots, 2; chemicals, 3.

Assets, over $2,000,000.00

Losses paid since organization over $35,000,000.00

The following table shows that 995 lives have been sacrificed to fire during the past four years:—

	1909.	1910	1911.	1912.
January	16	27	27	27
February	8	15	12	11
March	10	20	18	24
April	18	37	20	15
May	21	15	28	18
June	16	52	13	6
July	4	15	110	9
August	17	11	22	16
September	10	10	13	6
October	20	16	17	21
November	34	19	20	22
December		19	17	28
Totals	219	256	317	203

As will be seen from the following table burning buildings were responsible for 92 deaths and 37 deaths were the result of clothing set alight. Playing with matches added 10 to this gruesome record.

	1910.	1911.	1912.
Water tank collapsed	32	...	..
Clothes on fire	28	45	37
Playing with matches	15	24	10
Overturned lamps	9	6	17
Prairie fires	9	100	3
Burning buildings	121	111	92
Burning barns	6	..	..
Lamps exploding	5	7	5
Playing with fire	3	3	..
Sitting nea rstove	2	4	..
Making bonfires	3	..	..
Burning station	2	..	..
Suffocation	5	3	..
Overturned stove	2	7	..
High gas jets	.	6	..
Coal oil stove explosions	.	..	6
Gasoline explosions	.	..	8
Train wrecks	.	..	4
Lighting fire with coal oil	.	..	3

One death resulted from each of the following causes:—Burning oil, burning dead flies, steam crane accident, turpentine ignited, smoking, fire resulting from explosion, bush fire, camp fire, bed set alight, upset candle, thrown from fire wagon, burning steamer, kerosene oil exploded, auto set alight, spirit stove exploded, fell in boiling kettle, stove.

Maintenance of Fire Fighting System.

The maintenance of Canada's fire fighting system is costing $1.25 per capita per annum, as compared with the expenditures in Europe for the same purposes of only 50 cents per capita. In spite of our expenditures for fire fighting equipment and our admitted equality in that respect, our fire loss is eight times greater than the loss in Europe. The fire loss in the United States and Canada is $50,000,000 more than the output of gold.

Berlin, Germany, with the population of about three million inhabitants, has an annual fire loss of $250,000. Chicago, with about the same population, has an annual fire loss of over $4,000,000. Montreal, with the population of about half a million, has a fire loss of about $1,000,000.

Fire Losses Here and Elsewhere.

The following table gives an idea of the fire losses in different European cities compared with cities on this continent:—

Country.	Population.	Total fire loss.	Loss per capita.
Austria	193,387	$ 72,355	$0.37
Russia	2,673,427	3,100,823	1.16
United Kingdom	4,319,816	1,705,750	0.42
Belgium	312,987	178,766	0.57
Germany	7,446,447	1,832,402	0.25
Norway	222,373	207,000	0.93
Switzerland	715,712	192,500	0.27
France	4,029,116	2,202,744	0.55

Here is a comparison of fire losses in American and European cities, classified according to population.

Population of	United States cities.	European cities.
Over 300,000	$2.24	$0.65
100,000 to 300,000	2.14	0.37
50,000 to 100,000	2.17	1.67
30,000 to 50,000	3.28	0.72
10,000 to 30,000	2.37	0.81

The next comparison is between American and foreign cities of approximately the same size:—

	Cities.	Population.	Fire losses.	Loss per capita.
1.	Paris, France	2,714,068	$1,266,282	$0.47
	Chicago, Ill.	2,049,185	3,937,106	1.48
2.	Francfort, Germany	324,500	99,492	0.31
	Cincinnati, Ohio	345,230	1,971,217	5.70
3.	St. Petersburg, Russia	1,500,000	2,128,541	1.42
	Philadelphia, Penn.	1,441,735	2,093,522	1.45
4.	Birmingham, Eng.	550,000	266,506	0.41
	Baltimore, Md.	553,669	916,603	1.66
5.	Sheffield, Eng.	426,886	75,989	0.18
	Cleveland, Ohio	460,000	515,194	1.12
6.	Toulon, France	101,602	55,391	0.55
	Atlanta, Ga.	104,984	225,273	2.15
7.	Bremen, Germany	203,847	78,372	0.38
	St. Paul, Minn.	204,000	522,447	2.56
8.	Molenbeck, Belgium	63,678	106,349	1.67
	Eavanville, Ind.	63,957	196,702	3.08
9.	Lalken, Belgium	31,121	22,349	0.72
	Oshkosh, Wis.	31,033	80,500	2.59
10.	Etterbeck, Belgium	23,992	19,504	0.81
	Easton, Penn.	25,238	32,073	1.27

Fire Chief Tremblay, of Montreal, states that speculation in insurance, poor building by-laws, and lack of proper legislation, are some of the chief causes of the fire waste. Incendiarism is too common in Canada. Fire Commissioner Latulippe, of Montreal, reports that at least 65 per cent. of the fires investigated by him reveal over-insurance, and that 40 per cent. are, in his opinion, of incendiary origin. The Monetary Times is a strong advocate of the appointment of a fire marshal in each province, to overcome these conditions. Manitoba is the only province with such an officer.

Losses in the United States.

The following table shows the fire losses of the United States and Canada last year with comparisons:—

	1910.	1911.	1912.
January	$15,175,400	$21,922,450	$35,653,150
February	15,489,350	16,415,000	28,601,650
March	18,465,500	31,569,800	16,650,850
April	18,091,800	17,670,550	16,349,400
May	18,823,200	21,422,000	21,013,950
June	13,183,600	20,691,950	16,103,450
July	26,847,900	25,301,150	15,219,100
August	21,570,550	12,662,650	14,158,800
September	11,700,000	11,333,250	13,779,300
October	37,188,300	13,945,000	13,651,650
November	16,407,000	18,680,600	16,172,300
December	21,528,000	22,722,850	*16,300,000
Total	$234,470,600	$234,337,250	$223,653,900

*Estimated.

INADEQUATE LIFE INSURANCE IS USUAL

A man may have his life insured for a limited amount but far inadequately. The question from this standpoint has less consideration than it ought. Because one policy for a small sum is possessed, it should never be permitted to stand as sufficient. Give thought to the situation of the family if death should come unforeseen. How long could they exist upon a single thousand dollars, and what would be their situation thereafter.

Actual experience has demonstrated this point recently. A professional man in one of the large cities died unexpectedly, and while he had a small policy, his family felt under the necessity of moving from the home they had been renting and seeking less expensive accommodations, realizing that the comparatively small fund which came from insurance, and which was all that was left, would slip away far too readily without constant effort to keep from using the principal.

What every man ought to do is readily explained by theory, i.e., have insurance enough so that the income from the sum, when well invested, would be sufficient for comfortable living. Some difficulty would naturally be encountered in paying the premiums upon such a sum, but the ordinary man can usually afford far more in the way of insurance protection than he is usually inclined to carry.—Exchange.

◆

WESTERN EMPIRE LIFE ASSURANCE COMPANY

The Western Empire Life Assurance Company, with headquarters at Winnipeg, has just completed its first year's business. It procured its license in January, 1912, and then had only two agents. The premium income last year exceeded $27,000. The surplus to policyholders is over $200,000. Some interesting figures showing the progress of the company appear in its official announcement on another page.

LIFE ASSURANCE COMPANY'S SHARES

Capital is not Essential to Success in a Life Company —Shareholders' Credits and Debits

Canadian life assurance companies' shares are rarely referred to by financial writers. The reason for this, no doubt, is the limited number of transactions which take place in them. Very few of the companies' shares are listed. There are twenty-two Canadian life companies with paid-up capitals, and, remarkable to say, if we scan the Montreal Stock Exchange list we will not find a single company's shares listed there, and on going through the Toronto Stock Exchange list we discover that the shares of only the Canada Life, Confederation Life, Imperial Life, and Union Life are listed. It has been thought that a few facts regarding the part played by capital in life assurance might be of some interest to the hundreds ot thousands of policyholders as well as to the shareholders of Canadian life companies.

Capital is Relatively Unimportant.

Omitting two associations which are gradually emerging from fraternal insurance into old line life assurance, there are twenty-three offices conducting life assurance in Canada. One of these, a highly successful institution, has no capital stock, the whole of its surplus accruing to the benefit of its policyholders. The other twenty-two offices have paid-up capitals ranging from $50,000 to $1,000,000. It will thus be seen that compared with our banking and large loaning institutions the capital of life companies is exceedingly small. While an important paid-up capital is absolutely essential to the success, progress and expansion of banks and loaning institutions, to a successful life company it is non-essential; in fact, by many it is regarded as a detriment.

Obligations Provided Out of Premiums.

According to the present Dominion Insurance Act, before a life company can commence business it is necessary for it to make a deposit with the Government of $50,000. If it were not for this requirement it would not be necessary for many of the life companies to have as large a paid-up capital as they now have. From the very nature of the business a large capital even at the commencement of business, is not required. Life companies obligate themselves, in consideration of annual payments, to pay a sum at death, or upon the completion of endowment terms—ten, fifteen or twenty years, etc. Their obligations, therefore, on the average, do not mature for many years and are fully provided for out of the annual premiums received.

The principal need of capital in life assurance is to provide, at the commencement, the statutory deposit and to assist in the establishment of the business. No capital expenditure is needed; merely a fund is required to see the company safely over its first two or three years of heavy expense incident to establishment.

Control Easily Obtained.

The limited amount of the capital of life companies has introduced a condition which does not obtain in any of our other financial institutions, viz., the ability of a single interest to secure absolute control. It is not known that the majority of the stock of any of our important banks or loaning corporations is controlled by any individual or group of allied interests, such as is the case in several of our life assurance companies. Life companies are none the less public institutions than banks and loaning corporations. They receive their authority to carry on business from the Government, they are obliged to make an annual and semi-annual returns to it; their business is entirely with the public, and they are dependent upon the public for their support and continuance.

The total paid-up capital of twenty-two Canadian life companies amounts to $5,567,103. Their assets aggregate $171,989,556. Thus, it will be observed that the capital stock which controls life companies is relatively small compared with the large funds which the companies have accumulated from the public—it represents but 3% of the aggregate assets on the average, but when considered in the case of individual companies the disparity between capital stock and aggregate funds is very much greater. For example, in one company the capital stock represents but 1/20th of 1% of its assets; in another 1/15th of 1%; and in another 1/5th of 1%.

As to Dividends.

The dividends paid on life companies' shares do not aggregate much in amount, although in some instances the percentages are high. From the following table the reader will be able to note for himself the paid-up capital of the individual companies, the dividends paid thereon and the resulting percentage, as well as the total assets of the individual companies and the percentage which the paid-up capital is of these assets:—

Paid-up Capital, Dividends, Assets—With Percentages.

	Paid up Capital	Dividends Paid Amount	%	Total Assets	Per cent. Paid up Capitalto Assets
B. C. Life	$ 92,509	None	..	$ 104,240	88.7

Shareholders Credits and Debits.

The new enlarged Government returns require the life companies to separate their surplus funds into two parts, one belonging to policyholders, and the other to shareholders. This requirement being a new one, several of the companies have not yet been able to make the division, and therefore the official returns do not disclose in these cases the amount of surplus which belongs to the respective interests. It is expected, however, that every company's returns for the year ending December 31st, 1912, will make a complete exhibit in this respect. The new returns also require the companies to show the credits and debits made in the year to the shareholders' fund. The credits comprise interest for the year on the paid-up capital and on any amounts standing to the credit of shareholders plus the shareholders' proportion of the year's surplus, usually 10%. The following table is interesting as showing the amounts standing to the credit of the shareholders' funds at the commencement of 1911, the additions made thereto, the deductions for dividends, etc., and the balance of the fund at the close of 1911:—

Shareholders' Account.

	At Credit Dec. 31/10	Additions Interest-share of Surplus	Dividends, etc.	At Credit Dec. 31/11
Canada Life	$103,891	$ 58,509	$82,662	$ 79,737
Confederation Life	73,070	1,314	20,000	52,383
Crown Life	17,242	6,456	11,173	12,525
Dominion Life	46,891	15,538	11,000	51,429
Excelsior Life	11,503	6,598	6,000	12,001
Federal Life	51,655	13,853	13,075	52,433
Great West Life	27,493	197,686	82,333	142,946
Imperial Life	140,089	57,942	45,000	153,031
London Life	1,439	4,000	4,000	1,439
Manufacturers' Life	44,887	37,636	24,000	58,523
Northern	2,777	28,766	30,227	1,317
Sun Life	58,460	40,356	38,399	60,417

N.B.—It should be noted that companies have not adopted a uniform method of treating the shareholders' account: For example, some have credited the account with its proportion of the total surplus earned, while others with only the share of the amount set aside for distribution; then again, in the case of the Confederation Life, the shareholders' proportion of surplus, $38,148, has been magnanimously excluded from the shareholders' account and carried into the policyholders' surplus fund. In a few cases, under the heading of dividends, the companies have included amounts of expenses associated with the fund.

Reason for Fancy Prices.

A consideration of the foregoing indicates pretty clearly that shareholders' yearly profits in life assurance are not very large and that there is little justification from the standpoint of earnings alone for the fancy prices which are stated to have been paid and offered for such a block of stock as would secure a majority holding. The motive for securing such a block is not for an investment. for life assurance stock does not generally afford an over attractive medium of investment, but it is usually, that the purchaser may control the policy and destiny of the company.

It is believed that the business of life assurance is best conducted when the directors are directly responsible to the policyholders (95% of whose funds constitute the company), and that when a company becomes established, there should be means whereby the capital can be redeemed by the policyholders on terms which will be regarded as reasonable and fair to the shareholders, keeping in mind the limited dividends which have been received in the past, and the important risk which the shareholders ran in subscribing for capital at the commencement of the company.

SUB-STANDARD LIFE INSURANCE

Something of Its History at Home and Abroad—A New Company Will Write the Business in Canada This Year

The magnitude of insurance in the fullest sense of the word is probably only grasped by a limited number familiar with its details and methods, and who at the same time have had the opportunity by study and observation of taking a comprehensive view of the subject.

The further one studies the subject of life insurance the more one is impressed with a sense of its greatness, and how it has happened that by adhering to sound and scientific principles the security afforded by our great life offices is today greater than that of any other financial institution in the world.

Of all the branches of the science of life insurance perhaps one of the most interesting to the community is the insurance of under-average or sub-standard lives. This subject has engaged the attention of the foremost thinkers in the insurance world, both actuarial and medical, and from time to time exhaustive studies have been made in the past, with the view to providing data, as a basis for insuring invalid lives.

Endorsed by English Actuaries.

The assurance of sub-standard or under-average lives has received the consideration of the English Institute of Actuaries on many occasions during the past fifty years. Such well-known British Actuaries as Messrs. Makeham, Meikle, Macfadyen, Stott, White, Whittall and many others, have all dealt with the question of extra mortality. Some from the point of view of climatic or occupation risks and others from that of deteriorated health or defective family history. So long ago as 1884 Messrs. White and Whittall in an illuminating contribution said, "It has scarcely received the attention which might have been expected to have been bestowed upon it, seeing that it is constantly confronting us in many different ways, still signs are not wanting that it is being seriously revolved in the minds of not a few."

The great British office upon the experience of which Messrs. White and Whittall largely based their investigation of the subject, was organized some ninety years ago to deal with this class of risk.

The essay illustrated how carefully the question had even then been considered on its actuarial side and the safeguards to be adopted to make the problem commercially successful. It is interesting to know, although we believe that it has never been published, that this investigation has been carried to a much later date and abundantly justified the soundness of the premises laid down in 1884. It is to be regretted that the company has never extended its operations beyond the British Isles.

Need Life Insurance More Than Others.

On this side of the water the question has also received critical actuarial consideration. Mr. William J. Graham, Fellow of the Actuarial Society of America, &c., &c., in his romance of Life Insurance says: "The scientific measurement of risks of all classes, including many gradations of sub-standard risks—who, perhaps, need life insurance more than other classes—is the final achievement of scientific research on commercial dealing with human life."

The New York Life Office have placed their valuable experience of this class of work for more than 10 years before the public. Dr. Oscar H. Rogers, medical director of that company, in a notable address before the Association of Life Insurance Medical Directors, N.Y., said: "For a period of more than 10 years up to January, 1907, the New York Life extended the benefits of life insurance to large numbers of more or less gravely impaired lives. It freely offered insurance to cases of albuminuria, heart renal disease, glycosuria, cured phthisis, and so on through a wide range of impairments, and it did this on terms which experience shows to have been just and fair both to the insured and to the company. It did a sub-standard business in the broadest sense of the term. It took the ground that every person of good moral character and not actually ill is insurable on some plan, whatever the nature and degree of his impairment."

Firm Believer in Sub-Standard Insurance.

In another part of his address he says: "I am a firm believer in sub-standard insurance. It is economical. It is also in the highest degree beneficent. A company which carries on sub-standard business on broad lines is able to assume risks on at least 50 per cent. of those cases which other companies decline.

Dr. Oscar Rogers proceeds to give figures as to the volume of business written by his company, and, in concluding his address, after having proved how satisfactory the business had been from both a financial and humanitarian standpoint, deplored the fact that their laws "had not been framed so as to permit the continuance, to say nothing of the extension, if this were possible, of this most beneficent branch of insurance work."

Company to Write Business in Canada.

The laws of Canada, though framed with a due regard for the protection of all classes of assured lives, do not prevent the extension of this work. A new company, therefore, has secured a charter with a view to specializing in sub-standard lives. The old line companies who in justice to their tradition have too often had to refuse protection to this class, will be interested in a company that will give protection to the unfortunate sub-standard risk who really needs protection even more than the normal life. The promoters anticipate that the demand for this class of assurance should make it easy to obtain, and thus lessen the initial cost of the business so important to a new company. The officers connected with the company are well known in the insurance world, while their actuary has had many years' experience of these sub-normal risks in the British office referred to above and also on this side of the Atlantic.

WARNING AGAINST FIRE INSURANCE BY MAIL

Canada is inundated with circulars from so-called insurance brokers in the United States offering cheap fire insurance. The Monetary Times has frequently warned its readers against the acceptance of this sort of "protection." Deputy Insurance Commissioner Laird, of Alabama, has issued the following statement:—"Brokers who seek fire insurance lines by mail are often wolves in the clothing of sheep, and much to be avoided. Our files are loaded with proof that many insurers are defrauded by this kind of solicitation and that numbers of innocent business men are taken in by schemes of this kind. Property owners are urged in the line of good insurance practice, to demand that every agent soliciting from them exhibit authority from the State as such solicitor, and that every company in which they are asked to take protection have the authority of the State Insurance Department. Otherwise it is not safe, and the amount of unreliable business is so large as to make everybody fearful. This department will take pleasure in informing insurers of the standing and responsibility of any company or agent seeking their patronage."

THE LADY, THE STORK AND INSURANCE

A French insurance company has just paid $2,000 to a lady who called at the office of the company some time ago and said she wanted to insure against the risk of having twins. The officials had no tables prepared with a view to such an event, but they issued a policy insuring her against the birth of twins for a premium of $12.50 monthly for six months. A few days ago the manager of the insurance company received a dainty card announcing the birth of twin daughters to their client. The Matin, which tells the story, says that he at once forwarded a sack of bon-bons and a cheque for $2,000 to the mother.

SHOULD INSURE WHEN YOUNG

It is seldom that one can write a risk from ages 56 to 59 and have a good policyholder from the company's standpoint, for a period of three or four years. The main reason for this is that the applicant has already done nearly forty years of work, which is quite a long period for one machine to be continually active. Then when a disability does come at that advanced age, his physical condition all goes to pieces, so to speak; also it invariably requires about twice as long for a recovery from a disability at an age over 55, as it does for ages under 45. Looking at the question from all sides, one can readily see that risks are not profitable for the company after age 55.—V. I. M.

CANADA NATIONAL FIRE INSURANCE COMPANY

In the official announcement of the Canada National Fire Insurance Company, which appears on another page of this section, it should be noted that the number of the company's vice-presidents is three. They are Messrs. Nicholas Bawlf, D. E. Sprague, and F. H. Alexander. Captain William Robinson is the president, and Mr. W. T. Alexander, the managing director. The remaining directors are Messrs. F. F. Hutchings, E. D. Martin, E. S. Popham, M.D., E. L. Taylor, K.C., S. D. Lazier, D. R. Dingwall, Jonathan Rogers, Andrew Grey, and F. N. Darke.

CAUSE OF POPULARITY

Success in Life Assurance rests on giving the maximum of benefits at a minimum of cost, with security absolutely unassailable.

Judged from these standpoints, this Company stands out as an unqualified success.

Not only is a great and growing business being transacted, but the interests of the policyholders are the first and chief consideration.

Each succeeding twelvemonth has given evidence of consistently maintained endeavor to conduct the business in such a manner as will call forth the hearty approval and commendation of those best qualified to judge.

From past records there is every justification for anticipating still greater progress and prosperity in the years to come.

AN ORDINARY YEAR FOR FIRE UNDERWRITERS

Legislation in Quebec—Western Canada Fire Underwriters' Association—Missionary Work

BY W. B. MEIKLE

(Printed by special arrangement with the New York Journal of Commerce.)

The year 1912 does not stand out for any remarkable occurrence in Canadian fire insurance matters. The business will probably result in what in former years would have been deemed a satisfactory percentage of loss to premiums, but in a new era of higher agency commissions and increased expenses generally the actual profit in underwriting will be a meagre one. Competition from new companies entering Canada has not made it easy for the old established companies to [illegible] business, notwithstanding the phenomenal development of the insurable property in most sections of the Dominion. The fires have been numerous, and many of them have caused heavy insurance losses; indeed, in several instances reaching to the degree of canflagration disasters, and disturbing the equanimity of the underwriter taking chances in the congested blocks of the important cities. There have been also many fires which, but for good fortune in some instances and commendable service on the part of the brigade forces in other instances, would have reached the dimensions of conflagrations and the underwriter who [illegible] whatever term best expresses conservatism in our speculative business) can also say that nothing has occurred in the year to make him re-cast his line of policy. Each will probably close his account for the year with the feeling that if the expense item had not been increased, the profit would have been fairly satisfactory, but with the higher expense he will have to set up a lower ratio for losses as his ideal for future years.

Montreal Fire Prevention Criticized.

The fire at Chicoutimi, Quebec, in June was the most serious of the year . The town is situated on the shore of the Saguenay River, which it follows in a somewhat straggling fashion, thus giving length but no great breadth to the built-up portions. The construction of the buildings generally was frame or brick-veneered, and the meagre fire protection was powerless from the outset. The Roman Catholic Cathedral, notwithstanding its isolation and somewhat superior construction, fell an easy prey to the flames. This building with the seminary, which was destroyed, accounted for $450,000 of the total loss of $1,000,000.

Montreal with its heavy congestion of values, narrow streets, indifferent construction and severe climatic conditions, has long been a problem to the Canadian underwriter, but that city with its broken-down water supply ceases to be a problematical fire hazard and assumes the shape of a very present menace and anxiety. The recent breakdown at the pumping station, followed by alarming weakness in the underground mains, was directly responsible for a loss to the companies of hundreds of thousands of dollars in the Consumers' Cordage and Bag Company fire, and it must now be asked how long the property owners and the insurance interests propose to subject themselves to the financial loss which such an unreliable fire protection service must inevitably produce. Lax and inefficient municipal administration is, and has been, the basis of the trouble and the demand of the underwriters and of other public bodies, for an expert and thorough investigation was but a reasonable one. Such an enquiry may fix the blame. The acquiescence of the fire companies in the continued jeopardy of their funds without adequate return is another question.

Quebec and its Legislation.

The legislature of the province of Quebec, may impose an additional burden upon the fire companies in the shape of a tax of one-quarter of one per cent. per annum, on the premiums. The primary object of the proposed legislation is reported to be the procuring of funds for the maintenance of an official whose duties will require that he become an advisor to the outlying municipalities in the matter of improving fire protection, though why this tribute should be levied also upon the cities of Montreal and Quebec, from which are derived fully two-thirds of the premiums yielded by the province, is not explained. Whilst admitting the need of better protection, a doubt exists as to whether the idea is either practical or feasible, though it is satisfactory to know the appointment carries with it the powers of a fire marshal, and in that capacity some advantage may accrue to the public and the insurance interests generally. Much in fact, depends upon the choice of the official. A capable and fearless official, unhampered by ties of any kind, could cultivate a field of labor creditable alike to himself and to the government served. As Quebec is not generally a profitable field for fire insurance companies they may well indulge in a scrutiny of their fire experience in, and of the rating schedules for the province, to see whether an increase in rates is not now necessary to cover its heavy losses and abnormal provincial and municipal taxation. The taxation in percentage to premiums is fully three times what it is in the adjoining province of Ontario.

In other parts of Canada the only legislation deserving of special notice, has been the revision of existing Insurance Acts in the provinces of Ontario and Saskatchewan, but this has not made any material change in the business. In Ontario a new set of policy conditions has been agreed upon after consultation with various bodies interested.

Growing West will Bring Problems.

The early months of the year, saw an important change in the western field, when the Western Canada Fire Underwriters' Association cut adrift from the parent Canadian association, and is now an entirely independent organization. The change was largely due to the difficulties experienced in conducting the affairs of both associations between centres so many miles apart. That the new body will have many difficult problems to solve is apparent from the rapidly changing conditions consequent upon the growth of the western provinces, and the next few years of this formative period will make heavy demands upon the skill and experience of the responsible officials. There are signs that their duties will not be shirked, for with the vigor so peculiarly the attribute of Western citizens, the local association has grappled with a question which has puzzled the minds of most underwriters of the continent, namely, that of subsidiary annexes or underwriters' agencies. It is to be assumed the solution thus found, fully meets the views of the western managers and representatives, but it remains to be seen whether we have yet heard the last, even in that field, of this vexed question. British Columbia is complaining against the abuses growing out of this "Siamese" representation. With them, as with the Winnipeg board, the situation is the more acute owing to the existence of a single agency rule, of the principles of which the underwriters' agency is a direct infringement.

Public are Being Enlightened.

The insurance fraternity have for years been engaged in missionary work to improve the fire-fighting plants of the Dominion, in setting up a better standard of building regulations and in pressing for a fire marshal system or court of enquiry into the causes of fires where incendiarism, negligence or other suspicious circumstances make it in the public interest as much as in that of the insurance companies to have the facts investigated.

It is satisfactory to notice that the public are gradually becoming more enlightened on these matters, and that manufacturers' associations and public bodies are now engaging in campaigns for a reduced fire waste. Such organizations can get better results than the fire companies from educational work of this kind. By pointing out the economic waste of the country's wealth owing to the excessive fire loss, the loss of human life and the danger entailed by fires in frame and other inferiorly constructed buildings, they may be doing no more than their own interests demand, still it is not pleasant work to tell unthinking people that selfish interests must not continue and that it is both wasteful and wrong for them to imagine that the insurance companies can take care of the losses. Of course, they do this, to the extent of their liability, and are ready to continue doing so, but the price charged will always depend on the heaviness of the burdens. If these are not lessened, the premiums charged will not be lessened. All these thoughts were well and forcibly expressed in the address by Fire Chief Tremblay, of Montreal, contained in a recent issue of The Monetary Times

The companies appreciated the kindly reference of the Canadian Manufacturers' Association in their last report when their chairman stated that "the insurance companies were giving full recognition in cases where improvements had been made." There still remains for solution, the important question of unlicensed insurance and dealings with non-resident brokers, and it is to be hoped that the manufacturers will see that there is as much justice in the objections raised by the licensed companies to such irregular markets, as there is in the manufacturers' objections to the entry into Canada of non-dutiable goods manufactured abroad, and that they will be ready to discuss these problems in fairness and harmony.

WORKMEN'S COMPENSATION

Difference Between Conditions in Ontario To-day With Respect to Liability Law and What They Will Likely be Under Modern Legislation

BY C. W. I. WOODLAND.

While we have a so-called Workmen's Compensation for Injuries Act in force in Ontario, in reality it is not a compensation but rather an employers' liability act. There is a vast difference between the two. The term workmen's compensation as applied to the Ontario Act is a misnomer. In view of the wrong impression conveyed by the title, the employer of labor as a rule looks to the company in which he is insured for a great deal more than what his policy or contract calls for, and what he pays for. The employer pays for protection or to be indemnified "against loss from the liability imposed by law" upon him. He insures for his own benefit, and not for the benefit of his employees. Workmen's compensation insurance is a different proposition altogether. It is a form of accident insurance that calls for the payment to the injured workman of certain indemnities irrespective of how the accident occurred or who was to blame.

Under an up-to-date workmen's compensation law such defences as contributory negligence, common employment, assumption of risk, etc., etc., are done away with, and, subject to certain provisions and limitations, would entitle the injured employee, or in case of death his dependants, to compensation; the only proof of claim necessary being the fact that the employee met with an injury arising out of and in the course of his employment.

C. W. I. WOODLAND.

Does Away With Litigation.

Under such a form of legislation the cost of insurance would be fixed by the insurance company commensurate with the obligations imposed upon the employer, and as the scale of indemnities would be provided for in the Act all the insurance company has to do is to make payments accordingly. This is an ideal condition and one that, provided the Act is carefully framed, practically does away with litigation, and from a humanitarian standpoint should meet with the cordial approbation of both employer and employee.

As I have already pointed out, in the province of Ontario to-day there is no such thing as a real workmen's compensation law. Under the present laws, the employer may not be held liable for accidents happening to his employees if

1. It can be shown that the accident was caused by contributory negligence on the part of the injured employee.
2. The accident was caused by a fellow-servant or workman in like employment.
3. The accident was incident to the injured man's employment and one over which he alone had control.

Question of Moral Liability.

These are only a few defences to an action for damages. There are many others. Suffice it to say that when an employer delegates to a liability company his responsibility, or legal position, as it were, in respect to accidents happening to his employees, it is for the insurance company to decide whether to allow compensation or defend an action for damages, for and in the name of the employer, at the insurance company's expense. The employer pays a premium for indemnity against his legal liability only. He pays nothing for what is termed his moral liability. The insurance is for his protection and not for the benefit of his employees.

A workmen's compensation act, on the other hand, is for the benefit of the employees, and such being the case the employer would have to pay more for his insurance than under present conditions, but no doubt would cheerfully pay the extra premium knowing that his moral as well as his legal obligations would be as cheerfully cared for.

Tendency Under Present Conditions.

The tendency under present conditions is for the employer to expect a little more, and sometimes a great deal more than what he pays for. It often happens that when an employee is injured the humanitarian and generous employer sends the injured employee to the hospital, guarantees the payment of hospital, doctors', and nurses' bills, and pays the injured employee's wages during the period of his disability—this aside from the conditions of insurance—and then expects the liability company to reimburse him for his outlay, even though it may subsequently have to defend an action for damages brought by the employee.

The old stock argument of the policyholder who assumes the functions of the insurance company upon his own responsibility, notwithstanding the fact that the contract or policy expressly stipulates that

> "The assured shall not voluntarily assume any liability, nor shall the assured, without the written consent of the corporation previously given, incur any expense or settle any claim except at his own cost, etc., etc."

is that "it pays better to settle than to have to fight a lawsuit," overlooks the fact that his is not the only case the liability company is dealing with, and that thousands of claims are constantly in the course of adjustment.

Litigation as an Unknown Quantity.

It will be a progressive move when the province of Ontario adopts an up-to-date workmen's compensation for injuries act. The cost for insurance would then necessarily be more than it is to-day. The insurance company carrying a risk would have something definite to go by in the matter of paying compensation. Litigation would be a thing of the past, and instead of the iniquitous, or I should say the ubiquitous, lawyer getting his share of the spoils as he does to-day, the full indemnity would be paid direct to the injured employee. Until this new order of things comes about the employer of labor carrying liability insurance should recognize the difference in conditions and keep in view the fact that the insurance he is now carrying is for his protection, and not in any sense of the word for the benefit of his employees.

FOLLY OF PERSONAL SURETYSHIP

A striking case showing the fallacy of personal suretyship occurred last year in Ontario. For obvious reasons *The Monetary Times* omits the names of those concerned in the incident. A man died leaving a young widow and an infant son of about a year old. By his will, he appointed his widow and a friend to be executors of his estate. The widow and the friend jointly took out letters of probate, the friend leaving the whole business to the widow. He took no further interest in the matter, thinking it was one of mere form and that the widow (the mother of the infant child) would be the person to look after the property.

The widow then married again and loaned the money of the estate to her second husband. He invested it in business and lost it all. He died and later the woman died, leaving no property out of which to replace the money lost to the estate. When the child arrived at the age of 21, he asked the friend, who had acted as executor with the widow, to account for the money. This the friend was compelled to do with interest, and had to pay the costs of the action, consequently being nearly ruined in his old age.

The story reveals in a forcible way the folly of appointing a personal instead of a corporation surety.

MONARCH LIFE INSURANCE COMPANY

Since the official announcement of the Monarch Life Insurance Company, (which appears elsewhere in this section), was printed, the company has formulated a good idea what its results were last year. They show an increase of 75 per cent. in new business over the previous year. Their aim for 1912 was achieved in November. The Monarch Life desires the services of two reliable western managers.

CONFLAGRATIONS MAKE THE MONEY FLY

St. John and Toronto Fires Made Record High Rate of Losses Paid Per Cent. of Premiums Received

In forty-three years, fire losses of $201,000,000 have been paid in Canada. At the same time, the premiums received totalled $320,000,000. Setting one against, the other, the rate of losses paid per cent. of premiums received was 62.96 per cent.

The following table gives the figures for each year:—

	Premiums received.	Losses paid.	Rate of losses paid per cent. of premiums received.
1869	$1,785,539	$1,027,720	57.56
1870	1,910,779	1,624,837	84.77
1871	2,321,716	1,549,199	66.73
1872	2,628,710	1,909,975	72.66
1873	2,968,416	1,682,184	56.67
1874	3,522,303	1,926,159	54.68
1875	3,594,764	2,563,531	71.31
1876	3,708,006	2,867,295	77.33
1877	3,764,005	8,490,919	225.58
1878	3,368,430	1,822,674	54.11
1879	3,227,488	2,145,198	66.47
1880	3,479,577	1,666,578	47.90
1881	3,827,116	3,169,824	82.83
1882	4,229,706	2,664,986	63.01
1883	4,624,741	2,920,228	63.14
1884	4,980,128	3,245,323	65.16
1885	4,852,460	2,679,287	55.22
1886	4,932,335	3,301,388	66.93
1887	5,244,502	3,403,514	64.90
1888	5,437,263	3,073,822	56.53
1889	5,588,016	2,876,211	51.47
1890	5,836,071	3,266,567	55.97
1891	6,168,718	3,905,697	63.31
1892	6,512,327	4,377,270	67.22
1893	6,793,595	5,052,690	74.37
1894	6,711,369	4,589,363	68.38
1895	6,943,382	4,993,750	71.92
1896	7,075,850	4,173,501	58.98
1897	7,157,661	4,701,833	65.69
1898	7,350,131	4,784,487	65.09
1899	7,910,492	5,182,038	65.51
1900	8,331,948	7,774,293	93.31
1901	9,650,348	6,774,956	70.20
1902	10,577,084	4,152,289	39.26
1903	11,384,762	5,870,716	51.57
1904	13,169,882	14,099,534	107.06
1905	14,285,671	6,000,519	42.00
1906	14,687,963	6,584,291	44.83
1907	16,114,475	8,445,041	52.41
1908	17,027,275	10,279,455	60.37
1909	17,049,464	8,646,826	50.72
1910	18,725,531	10,292,393	54.96
1911	20,575,255	10,936,948	53.16
Totals ..	320,041,252	201,495,309	62.96

The losses paid in 1877, were very high, amounting to $8,490,919 with premiums of only $3,764,005. This was the year of the conflagration at St. John, N.B. Companies doing business in Canada were hit hard, and the rate of losses paid per cent. of premiums received for that year was 225.58, the highest on record. In 1904, the year of the big fire in Toronto, the rate per cent. was 107.06, as compared with 51.57 in the previous year, which was more of a normal period. The losses paid in 1904 exceeded $14,000,000 as compared with $5,870,000 in 1903.

Taking the totals for the same forty-three years, according to the nationalities of the companies, the following are the results:—

Companies.	Premiums received.	Losses paid.	Rate of losses paid per cent. of premiums received
	$	$	
Canadian ...	71,492,172	45,849,671	54.13
British	200,462,315	127,500,185	63.60
United States and others .	48,086,765	28,145,453	58.53
Total ...	320,041,252	201,495,309	62.96

The loss rate for 1911, 53.16 was 9.80 below the average for the forty-three years over which the government records extend.

WINNIPEG
THE BEST LIGHTED CITY IN CANADA

WINNIPEG & WESTERN CANADA

The World's Greatest Growing Market for Manufacturers

The Western Provinces, now attracting hundreds of thousands of settlers annually, offer the greatest growing market in the world to-day for manufactured goods of nearly every description. There are few, if any, cities in the world which present greater attractions to manufacturers than Winnipeg, economic railroad and commercial centre of the Last, Best West.

STUDY THESE FIGURES:

POPULATION OF WINNIPEG

1902	48,411
1904	67,262
1906	101,057

CANADA'S INDUSTRIAL LIFE

Nearly Twenty Thousand Factories are Turning Out a Billion Dollars Worth of Products.

	1900.	1910.	—Increase—	
			Totals.	Per Cent.
Number of establishments	14,650	19,209	4,559	31.12
Capital employed	$446,916,487	$1,245,745,496	$798,829,009	178.74
Number of employees	339,173	514,281	175,108	51.62
Their salaries and wages	$113,249,350	$ 240,523,651	$127,274,301	112.38
Value of products	$481,053,375	$1,164,775,532	$683,722,157	142.13

The above table shows at a glance the industrial position of Canada and its growth in ten years. The figures of the census report of manufactures reveal many interesting features of Canadian industrial life. The census for 1910, taken in 1911 and published in part last year, shows notable increases over the figures of 1900. The number of manufacturing establishments increased in the decade by 31.12 per cent. Capital was enlarged by 178.74 per cent., and this helped to employ 51.62 per cent. more operatives who received salaries and wages 112.38 per cent. greater than in 1900. The products of 19,209 Canadian factories in the ten years increased 142.13 per cent.

The instructions for the census of 1901 provided that no factory should be so recognized which employed less than five persons, but made exceptions in the case of butter and cheese factories and brick and tile works, in which industries comparatively large operations may be carried on with less than five employees. It was observed that the same rule might have been applied in the case of flour and gristing mills and electric light plants, and in the census of 1906 and 1911 the exceptions were extended to the industries of flour and gristing mills, saw and shingle mills (lumber products), fish curing plants, lime kilns and electric light and power plants, as well as butter and cheese factories and brick and tile works when operated by less than five persons. These exceptions added $8,886,303 to the value of capital in 1905 and $14,658,010 in 1910 and to the value of products $8,901,486 in 1905, and $17,753,848 in 1910. They did not, however, affect to more than a negligible extent the totals of all industries, being a little more than one per cent. of the value of capital in 1905 and 1910, 1.24 per cent. of the value of products in 1905 and 1.26 per cent. in 1910.

Merging of Small Industries.

The reduction of the number of industries in 1905 employing less than five persons, as explained in the report for that year, was owing in part to the merging of small industries with larger concerns under one management, and also that in the case of large establishments carrying on several kinds of industries one return was made for 1905, whereas for 1900 separate returns were made for each kind. The merging of industries continued to operate during the second period, so that while the number employing five hands and over was 12,547 in 1905, and 16,198 in 1910, as compared with 14,650 in 1900, the values of products had risen in the successive census periods from $481,053,375 in 1900 to $706,446,578 in 1905, and to $1,147,021,684 in 1910.

Analysis of several industrial amalgamations at the time of their consummation revealed the injection of "watered stock." While the figures show that the capital employed in our industries increased $798,829,000 or 178 per cent., part of that gain cannot be considered as cash. On the other hand, the statistics indicate that most of it meant actual investment of capital, as it would be impossible with "water" to have an increased production of 142 per cent. and to pay wages 112 per cent. greater. The six industries which maintain the greatest number of establishments are as follow:—

Industry.	No. of Establishments.
Butter and cheese	3,625
Log products	3,499
Preserved fish	1,521
Flour and grist mill products	1,141
Lumber products	859
Foundry and machine shop products	514

Largest Amount of Capital.

The largest amount of capital is employed in these six industries:—

Industry.	Capital employed.
Log products	$146,395,438
Electric light and power	110,838,746
Foundry and machine shop products	53,068,046
Lumber products	52,547,261
Agricultural implements	45,232,098
Flour and grist mill products	42,905,689

The greatest number of operatives are employed by the six following industries:—

Industry.	No. of employees.
Log products	76,424
Foundry and machine shop products	26,835
Car repairs	22,009
Preserved fish	18,320
Boots and shoes	17,227
Lumber products	17,225

Wages and Value of Products.

The industrial workers of Canada in 1910, the year for which the census was taken, drew the largest amount of wages and salaries from the following industries:—

Industry.	Employees' Wages.
Log products	$25,822,382
Foundry and machine shop products	14,740,095
Car repairs	13,553,530
Lumber products	9,615,046
Boots and shoes	7,698,333
Iron and steel products	7,147,253

The industries producing the greatest value of products were the following:—

Industry.	Value of products.
Log products	$105,506,190
Flour and grist mill products	82,494,826
Foundry and machine shop products	45,611,416
Slaughtering and meat packing	41,208,796
Lumber products	39,805,615
Iron and steel products	34,613,710

Results of Large Industries.

Judging the importance of the industries from the view points of establishments, capital, employees, wages and value of products, the greatest industries in Canada are log products, lumber products, foundry and machine shop products, flour and grist mill products, preserved fish, car repairs, boots and shoes, iron and steel products.

Three thousand six hundred and twenty-five establishments with $8,747,000 capital, and an average of less than two employees to each establishment, produced no less than $37,000,000 worth of butter and cheese. Their wages totalled $1,701,000. Even a more striking result is seen in the figures respecting slaughtering and meat packing, in which business, 70 establishments, capitalized at $13,746,000, employing 3,781 hands, who received wages of $2,406,571, yielded products valued at $41,000,000. A large amount of capital, namely $110,838,746, was employed by 266 establishments to produce less than $13,000,000 worth of electric light and power goods. More than $20,000,000 worth of agricultural implements were manufactured by 77 establishments. They employed 9,560 operatives and $45,000,000 capital. Wages amounting to $5,551,000 were paid.

Iron and Steel Products.

In the case of iron and steel products $34,201,000 was the capital employed to produce products valued at $34,613,000. Eighty-nine factories and 11,286 employees were engaged in this business.

Twenty-five million dollars' worth of bread, biscuits and confectionery was produced by 323 establishments and 10,000 employees. The capital employed was $15,756,000. Sugar refining employed $19,000,000 of capital and gave $21,000,000 in products, eight factories being responsible for these results. The tanned, curried and finished leather industry, with capital of $17,000,000, was responsible for nearly $20,000,000 of products from 113 establishments.

Small Factories are Important.

Apparently the biggest factories have not been responsible for the best results. According to the census figures, the establishments of moderate size are an important factor in Canada's industrial field. Taking the industries by groups, the following table gives the number and the value of their output in 1910:—

	No.	Product.
Under $200,000	18,112	$430,136,000
$200,000 to $500,000	716	219,099,000
$500,000 to $1,000,000	231	150,519,000
$1,000,000 to $5,000,000	136	261,081,000
$5,000,000 and over	14	97,939,000

The establishments of the first classification, with 254,998 out of a total of 514,281 employees, had an average production of $23,749 in the year, or nearly $2,000 for each person in their service. Respecting the larger establishments, one in Nova Scotia produced in 1910 more than $8,000,000 of goods, one in Ontario more than $9,000,000, and two in Quebec more than $10,000,000.

How the Provinces Share.

Analyzing the results of provinces it is found that in the number of establishments, capital and products in 1910, the record was as follows:—

	Number of Establishments.	Capital.	Product.
Ontario	7,992	$593,566,000	$578,763,000
Quebec	6,584	326,946,000	350,901,000
British Columbia	651	123,027,000	65,141,000
Nova Scotia	1,480	79,596,000	52,706,000
Manitoba	439	47,941,000	53,673,000
New Brunswick	1,158	36,125,000	35,422,000
Alberta	290	29,518,000	18,698,000
Saskatchewan	173	7,019,000	6,332,000
Prince Edward Island.	442	2,013,000	3,136,000

Ontario having the largest population and with other good reasons tending to encourage industry, naturally takes the industrial lead. The results of British Columbia and Alberta are due largely to the expansion of the mining industry. General industrial enterprise has shown development both in Quebec and Manitoba, giving those provinces a high position on the industrial ladder. Saskatchewan is perhaps more busy than any other province in tilling its land and has, therefore, not yet assumed any great industrial status. The figures of the maritime provinces are helped by their steel and coal industries.

The cost of raw materials used in the manufactures of 1910, the latest year for which figures are available, was $601,140,765, which when deducted from the value of products in the foregoing table gives the value added by manufacture, viz., $563,634,767.

◆

ELECTRIC RAILWAYS IN CANADA

Growth Has Been Rapid — Details of Ontario Companies—Comparison of Results

During the next few years, there is likely to be considerable development in electric railways in Canada. The large railroad corporations are considering the advisability of electrifying certain existing steam lines and building new electric roads for suburban service. Capitalists and charter holders are estimating the cost of linking small towns by electric roads. The present appears to be a time of preparation for the inauguration of an electric railroad era, especially in the older provinces of the Dominion. It is most marked in Ontario. The accompanying table shows to what extent the electric railroad is already in vogue in that province. The statistics are for the year 1911, the latest for which official figures are available.

The subscribed capital of twenty-eight roads in Ontario is $16,000,000. The paid-up capital totals $14,000,000, and the outstanding bonds $12,000,000. Their total liabilities are $36,737,000 and total assets $36,711,000. The operating results are interesting. With the exception of five, they all showed a surplus. The largest deficit, amounting to $421,967, was that of the Hamilton Radial. The total receipts of the twenty-eight were $8,009,000, and the total expenses $6,620,000, giving a total surplus of $1,430,000.

Receipts From Fares

Passenger fares accounted for the greatest share of receipts, revenue from freight and other sources being comparatively small. It is for passenger traffic that our transportation interests are apparently agreed that electric traction is most suitable. The receipts may be summarized as below:—

Receipts from	Amount.
Passenger fares	$6,811,493
Freight	238,557
Mail service and express	8,809
Other sources	163,415

The actual operating figures are of significance to railroad men and to investors particularly. The street car systems in the large cities naturally show the largest car mileage run, Toronto leading the way in Ontario with a mileage of more than 16,000,000. The cost of operation per car mile shows some striking contrasts. The lowest figures is that of the Cornwall Street Railway, $07.5. The highest is that of the Hamilton and Dundas Railway, $43.1. Of 22 roads, the cost of operation per car mile in 14 cases exceeded $20, and in eight cases was under that amount.

The smallest length of track is that of the Huntsville and Lake of Bays Railway, which has only one mile. It serves a holiday traffic, connecting boats. Last year it carried 14,000 passengers. The greatest mileage, 110.88, is that of the Toronto Street Railway. The number of passengers carried by the electric roads of Ontario in 1911 was 181,259,748, and the year before 157,539,893.

Roads in Western Canada

Among the important electric roads in other provinces are the following:—

Company.	Mileage.
Halifax Electric Tramway Company	13.15
Montreal Street Railway	230.97
Quebec Railway	17.00
Winnipeg Electric Railway	119.46

Electric roads are also operated or contemplated in several cities west of Winnipeg, including Brandon, Moose Jaw, Regina, Saskatoon, Calgary, Edmonton, Lethbridge, Vancouver and Victoria. The system in the two latter cities, as well as in smaller British Columbia municipalities, is operated by the British Columbia Electric Railway. It has 234 miles of railway.

In the entire Dominion the mileage of electric roads in 1911 was 1,223. The growth of first main track mileage since 1900 is as follows:—

1902	557.59
1903	759.36
1904	766.50
1905	793.12
1906	813.74
1907	814.52
1908	992.03
1909	988.97
1910	1,047.07
1911	1,223.73

As to the Capital Liability

The capital liability of electric railways in Canada was increased from $102,044,979 in 1910 to $111,532,347 in 1911.

The following statement will show the facts with regard to capital liability for five years:—

	1907.	1908.	1909.	1910.	1911.
	$	$	$	$	$
Stocks	43,491,746	50,295,266	51,946,433	58,653,826	62.251,203
Funded debt	31,166,976	37,114,619	39,658,556	43,391,153	49,281,144
Total	74,658,722	87,409,885	91,604,989	102,044,979	111,532,347

The gross earnings from operation for 1911 were $20,356,951.70—an increase of $3,256,162.22 over 1910.

The income for 1911 came from the following sources:—

Car earnings: Passengers, $19,130,376.22; freight, $744,179.11; mail and express, $88,233.13; other car earnings, $100,930.12. Total car earnings, $20,063,718.58.

Miscellaneous earnings: Advertising, $66,147.33; rent of buildings, etc., $22,551.98; rent of tracks, $13,650.94; rent of equipment, $58,624.40; sale of power, $43,698.24; other earnings, $88,560.23. Total, $293,233.12. Gross earnings from operation, $20,356,951.70.

Electric Railway Facts at a Glance

The following is a summary of statistical facts, compiled by Mr. J. L. Payne, comptroller of railway statistics, Ottawa, and relating to electric railways in Canada:—

	1909.	1910.	1911.
Total mileage	988.97	1,047.07	1,223.73
Paid-up capital	$91,604,989	102,044,979	111,532,347
Gross earnings	$14,611,484	17,100,789	20,356,952
Net earnings	$4,962,501	5,383,276	6,592,335
Earnings—			
Passenger traffic	$14,080,755	16,125,995	19,130,376
Freight	$386,092	575,537	744,179
Mail and express	$110,452	68,604	88,233
Other sources	$34,185	51,241	100,930
Total operating expenses	$8,885,235	10,121,781	12,096,134
Maintenance of way and buildings	$643,135	797,895	920,875
Cost of motive power	$1,445,227	1,586,927	2,001,543
Maintenance of cars	$1,184,287	4,814,762	5,768,085
General operat'g charges	$5,612,041	1,406,043	1,610,099
Total car mileage	60,152,846	65,249,166	72,618,806
Passengers carried	314,026,671	360,964,876	426,296,792
Tons of freight carried.		852,294	2,496,072

CANADA SHOULD HAVE SHIPBUILDING INDUSTRY

Field of Industrial Employment Must Be Enlarged—Bonus is Needed on Tonnage Constructed in the Dominion

BY J. J. SHALLCROSS.

Canada is passing through an era of prosperity stimulated by a large movement of capital and labor from Europe and although there is no sign, at present, of any reaction, it is obvious that every such movement must, at some stage, reach its maximum, and that a reaction of a more or less serious character is likely to follow. It is in the time of prosperity that efforts should be made so to broaden the field of industrial employment that the effects of a reaction may be minimized especially in respect to labor and the rate of wages.

Canada has adopted the policy of developing manufactures by protective duties but British ships are admitted to the Canadian register free of any duty while Canadian shipbuilders have not only to pay increased wages due to protection but also to pay duty on outfit and materials which are admitted free of duty in a British bottom.

Should Have Assistance.

On the Pacific Coast renewed attention has been directed to this question in view of the probable great expansion of shipping on the Pacific Ocean subsequent to the opening of the Panama Canal in 1915, and it is felt that the time has certainly come for such assistance to be given, directly or indirectly, to shipbuilding as will enable this industry to be placed on a firm and enduring basis. Certainly if it is good policy to develop other industries by taxation on imports no good reason can be forthcoming for the refusal of assistance to shipbuilding in the form that may be found most convenient.

There are already shipbuilding plants established in British Columbia capable of undertaking important work and these plants are estimated to represent the investment of over $3,000,000. The work done by these yards is chiefly confined to repairs because under present conditions it is impossible to compete with British-built vessels which are admitted, free of duty, to all the privileges of the Canadian coasting trade under the provisions of the Imperial Merchant Shipping Act which read as follows:—

> "736. The Legislature of a British possession may by an Act or Ordinance, regulate the coasting trade of that British possession, subject in every case to the following conditions:—
>
> (a) The Act or Ordinance shall contain a suspending clause providing that the Act or Ordinance shall not come into operation until Her Majesty's pleasure thereon has been publicly signified in the British possession in which it has been passed:
>
> (b) the Act or Ordinance shall treat all British ships (including the ships of any other British possession) in exactly the same manner as ships of the British possession in which it is made."

Vessel, Outfit and Machinery Come In Free.

This Act enables a vessel built in Great Britain or Ireland, with her entire outfit and machinery, to obtain the advantages of Canadian register without the payment of any duty, whereas a similar vessel built in Canada would pay duty on the greater portion of her imported materials and outfit and the rate of wages paid in her construction would be higher than in the former case owing to the effect of Canada's protective policy.

In 1911, only 339 vessels were built and registered in Canada—the total tonnage being 27,736 tons, an average of 80 tons per vessel, whereas in the age of wooden vessels, Canada was one of the most important shipbuilding countries.

The adoption of a naval policy by Canada will make repair yards and docks a necessity, but repair work is more or less intermittent, while if ships could be built under equitable conditions it would enable steady employment to be provided and the plants to be maintained in a high state of efficiency, ready to undertake repairs at a moment's notice.

Government Work in Home Yards.

The leading European countries recognize the importance of shipbuilding, and have adopted the policy of having Government work done in home yards, a policy which is also being followed by the United States and Japan.

On the other hand, the Government of Canada in considering tenders by Canadian shipbuilders in competition with tenders from abroad apparently makes no allowance for the duty which is paid to the Government nor for the higher wages paid in Canada and enforced by the fair wage scal clause properly inserted in all Government contracts, although the higher wages are partly returned to the Government in the form of duties on imported articles of consumption.

The Canadian Pacific Railway Company has had man of its new steamers constructed in Canada even when simila vessels could have been imported at a lower cost. In thi connection Sir Thomas Shaughnessy is reported to hav said:—"I notice that your boards of trade are asking th federal government to encourage shipbuilding in Canada In that idea I am absolutely at one with them, and, if the can make a good case, they will find no one more willing t co-operate with them than the Canadian Pacific Railway. W have given proof of our desire to encourage the shipbuildin industry in Canada both on the Great Lakes and on thi coast, and we intend to continue that policy as far as we can.'

It hardly needs further argument to establish the contention that the Canadian Government should have all Government vessels, excepting, perhaps, the largest ships of war built in Canada, those for the Atlantic Coast in the East an those for the Pacific Coast in the West.

Shipbuilding on a Large Scale.

If it is desirable to establish industries in Canada the means should be found to enable shipbuilding to be conducted on a large scale for no industry gives greate encouragement to other industries nor is likely to prove more important factor in developing our iron and coal resources.

Shipbuilding may be assisted either by the remission o duty on imported machinery and outfit or by a bonus o tonnage it being assumed that no alteration will be made i the privileges now accorded to British built vessels.

Section 4132 of the reivsed statutes of the United State provides:—

> "That all materials of foreign production which may be necessary for the construction or repair of vessels built in the United States and all such materials necessary for the building or repair of their machinery and all articles necessary for their outfit and equipment may be imported into the United States free of duty under such regulations as the Secretary of the Treasury may prescribe."

Bonus on The Tonnage.

The objection to the remission of duty is that it woul discourage the various contributory industries while thes should certainly be encouraged and they would be, i assistance were given to shipbuilding by means of a bonu on the tonnage constructed in Canada. The Royal Commission on transportation recommended as follows:—

> "In view of the fact that your Commission was appointed to deal with matters of transportation, and that these are vitally affected by the amount of tonnage suitable for the trade, and that tonnage can nowhere be so well supplied as from our own Canadian yards, your Commission feel that the question is one with which they should deal, and that reasonable assistance necessary to cause a revival of an industry of so great importance should be given, and would therefore, recommend that a bounty of $5 per ton gross register, be paid by the Government of Canada on all wooden vessels, sailing and steam, of 500 tons or over, commenced and built in Canada after June 1, 1906, and $6 per ton gross register on all such iron or steel vessels of 500 tons or over so commenced and built after that date."

Bonuses are not unknown in Canada as witness those given to lead and iron, and it is certainly of importance to Canada, with a seaboard on three oceans, that she should occupy a worthy place as a shipbuilding nation. If a bonus is to be given to shipbuilding it should be both specific and ad valorem so as to encourage the construction of vessels of the highest class requiring expensive machinery and highly skilled labor.

Sir George Paish believes that within the next two years there will be the beginning of a great reduction of credits throughout the world, coupled with a great increase in production. He points to the fact that the world has been building railroads in Argentina, Canada, Australia, etc., and that there will be a great outburst of agricultural production; also that the nations will be engaged in strenuous competition to dispose of their produce. He believes this will fundamentally alter the price of commodities and that the next five years should see a period of much lower commodity prices and of greatly reduced expansion, commercially and financially. He believes also that the world, which is now demanding securities with a big return and great speculative opportunity, will, within the next three or four years, be clamoring for securities with a lower income yield and greater safety.

MOTOR TRACTOR AND HORSE

Both Have their Work in the Western Provinces, but the Machine Counts Most on the Big Farm—Some Reflections on Western Agriculture.

BY E. CORA HIND.

The motor tractor is becoming more and more a factor in western farming, and it is having a very marked effect on farm methods and farm extension. There perhaps never has been a country so well adapted to this method of cultivation.

In one of the newer sections of Saskatchewan last year, a man who was turning ten furrows with a big tractor, was asked casually, what length of furrow he could make, and he replied "Forty miles; the only thing that could stop me is the Saskatchewan River. There is not a stone or stick between me and it."

Even three years ago, the motor tractor drawing eight or ten plows was a novelty; to-day, in the three prairie provinces there are known to be at least 6,500 motor tractors, and, in spite of the wet season, it is estimated that each tractor has worked about sixty days breaking new sod. An extremely conservative estimate would make the average for these machines ten acres a day; this means that there will be 3,900,000 acres of new land to be seeded in the spring of 1913. At this rate, it would seem that all available land would soon be broken, but, in as much as there are still 320,000,000 acres that have never been touched by a plow, at the rate of say 4,000,000 acres a year, the new land would still last eighty years. So that phase of the question need not cause any loss of sleep. Not all of the now uncultivated land could be broken with tractors, but by far the larger percentage of it certainly could, and will be. The average tractor being used in the Canadian West is 15 horsepower, so that the machines that have been in operation during the present season represent 97,500 head of horses. Horses suitable for this work could not be bought under $300 apiece, making an outlay of $29,250,000, and in addition they would require their keep. The average price of the motor tractor is $2,800, making an outlay for the machine now in the West of $18,200,000.

HORSE POWER.

Cost of Operating and Keep.

The cost of running the tractors is relatively less than the keeping of horses, for in addition to the feed for the horses there must be a man to take care of them, and one man is required for every eight horses. Another point is that the tractors do not eat anything in the winter while they are not working, while the horses do. Apart from being used for breaking the soil, they were utilized to a considerable extent this year in furnishing motive power for binders. One engine hauling as many as four binders has been quite a common sight, especially in Saskatchewan and Alberta.

Ever since cultivation began in the Canadian West there have been attempts at very large farms, the Bell Farm at Indian Head, and the Lester Kaye Farm at Medicine Hat, and other points were notable examples. Not one of these farms was a financial success, and one of the principal reasons for their failure was the enormous number of horses required and men to attend upon them. With the introduction of motor tractors, the big farm idea has been revived, and is proving successful. One of the most noteworthy is that of the Canadian Wheat Lands, Limited, at Suffield, Alberta, where 65,000 acres were purchased in February, 1911. In the spring of 1912, 12,000 acres of this land were seeded to crop, and during the present season 13,000 acres have been broken, and next year this farm will have 25,000 acres seeded for its second crop.

Divide the Farm into Sections.

The method which is being followed is to place a foreman over every four sections (that is, over 2,480 acres). He has his own buildings and equipment, and is responsible to the superintendent for the success or failure of his portion of the big farm. In this way a laudable rivalry is created among the various foremen, which certainly tends to good crops. The method followed in the breaking of the land was to break the sod very thinly, follow it with packers, and six weeks later back-set and work it down with drag harrows, finally packing it in the fall. This work was so well done that, at a little distance, it was hard to tell this new land from summer fallow.

It is the object of this company to bring the whole 65,000 acres under cultivation, and then sell it in improved farms. The 12,000 acres of crop this year gave excellent results. This section was one of the few that suffered considerably from the two weeks' drought in June, and the yields were somewhat curtailed on that account, but the following was the result of the crop:—

6,000 acres of flax, 16½ bushels to the acre;
1,200 acres of Marquis wheat, 22 bushels to the acre;
1,800 acres of Red Fyfe Wheat, 19 bushels to the acre;
1,200 acres of oats, 55 bushels to the acre;
500 acres of barley, 40 bushels to the acre.

The balance of the 1,200 acres was planted in corn, alfalfa and potatoes. This is just one example of a big farm. The Engin Farm, on the Goose Lake section of the Canadian Northern Railway, is being operated on somewhat similar lines, though on a smaller scale.

Element of Chance Exists.

There is a certain element of chance in these large operations, but when success is achieved the results are so gratifying that it is not to be wondered that men with capital are willing to take the chance. On the Engin Farm in 1911, there were three sections of flax from which the owner sold at his own station, 84,000 bushels, at $2 a bushel.

On the farm of the Canadian Wheat Lands, Limited, a very interesting experiment was made. Motor tractors were used for breaking 11,000 acres, but the other 1,000 were broken with oxen, and the experiment showed that the older and slower method did give a better seed bed, but the difference was not so marked as to counterbalance the value of the quicker method for large operations. It did, however, show that a man with small means going on a quarter section farm is still in a position to secure as great, if not greater, yields per acre, as the man with capital operating in a large way.

MOTOR POWER.

It might be supposed that this extensive use of motor tractors would have lessened the demand for horses and have lowered the price, but such is not the case. The demand for horses is greater than it has ever been, and the outlook is for a continued high market for many years to come. This is accounted for, not only by the demand from railway and irrigation camps, but by the development of the smaller farm, where, so far, tractors have not proved economical. There may come a time in the not distant future when the tractor will be profitable for a farm of 160 acres, but that time is not yet.

There is another feature of the new tractor, which is only just becoming apparent, but which will, no doubt, be more important with every passing year. The man who cultivates several thousand acres is not going to be satisfied with the employment of horse-power to take his grain to market, and if he is to use tractor power, it means, of necessity, better roads. It is already noticeable, that in the sections where the largest number of tractors are being used, the question of good roads is being most actively discussed, and in a few years a common sight will be motor tractors on country roads, hauling four, five and six wagon loads of wheat.

E. CORA HIND.

Some of the Drawbacks.

The larger areas of grain under one control, which follow the introduction of the tractor, lead also to the establishing of private storage on the farms where there are several thousand acres to be threshed, and that ground to be prepared for the next spring, it is more profitable to have portable granaries on the different sections of the farm, thresh into these, leave the grain standing, and go on with the plowing until the freeze up. The motor tractor on the farm is not an unmixed blessing. In too many sections it has led to much careless breaking, with a consequent poor seed bed and weedy crops to follow. It also has a tendency to stimulate ambition to outdo equipment. But while these are drawbacks, the introduction of the motor on the farm is, on the whole, good, and the men who use them are quickly remedying their mistakes.

The impetus in the use of the tractors unquestionably came from the United States settlers, but it is interesting to note how they have been influenced by their Canadian surroundings and are adopting Canadian methods. For example, the first outfits of this kind which came were heralded with a great flourishing of trumpets. They broke large areas and seeded it to flax in the same spring, and laughed at the slow Canadians, who considered breaking and backsetting one spring as essential to a good crop the following year. Now, the very men who scoffed are to-day the loudest in their insistence that the only proper way to bring new prairie land under cultivation is to break it, pack it, backset it, work it down with drag harrows, pack it again, and leave it unseeded until the spring following the breaking.

Should be Manufactured in Canada.

The motor tractor on the farms of the Canadian West has come to stay. Its use may be more or less modified as the years go on, but it will remain. At present, the bulk of the tractors used are United States made, but the growing demand for these engines should stimulate Canadian manufacturers. The fact that large areas of land are broken and brought under cultivation in this way will attract a class of settlers of whom hitherto we have had few, and that is the farmer with means who is quite willing to come to the Canadian West, but who prefers someone to do the pioneer work for him. It is not likely that the large farm will ever become a permanent part of the life of any agricultural community, but it has its place. At present, that place seems to be particularly the Canadian West, and this style of farming is only possible with the use of motor tractors.

SOLVING CANADA'S TRANSPORTATION PROBLEM

What Railway Companies Are Accomplishing—Assistance of Good Roads—Motor Vehicles

BY J. L. ENGLEHART.

The progress and development of Canadian railways has been marvellous. In 1835 there was not a mile of railway in the Dominion, there were only 16 miles in 1845. Ten years later, 1855, this had been increased to 877 miles. In 1865 there were 2,240 miles. While forty years later, 1875, there were only 4,804 miles in the whole Dominion.

The year 1885 was that in which the Canadian Pacific Railway completed the initial portion of that monumental labor, the Canadian Pacific Railway, and the mileage mounted to 10,733 miles. In 1895 the total was 15,977 miles, which in 1905 had increased to 20,487 miles, and in 1910 to 24,831 miles, while in 1911 no less than 25,400 miles of railway were completed and operated.

In addition to this there were many miles in the hands of contractors, being graded, and laid, or being laid.

Add to this 1,610 miles for double track, 5,550 miles of yard tracks and sidings, and a total of 44,193 miles of railway completed and under construction is obtained. Surely this is a record of which even our own grand Dominion has a just right to be proud.

The earnings of the railways were as follows:—

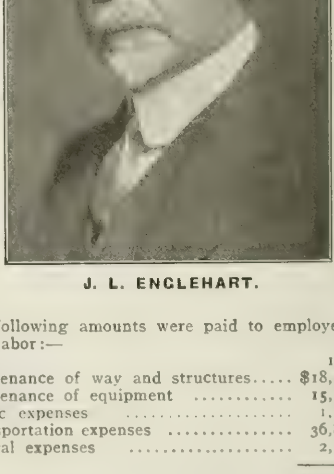
Year.	Earnings.	Expenses.	Per cent.
1905	$106,467,198	$79,977,573	75.2
1911	188,733,494	131,033,785	69.4

Capitalization and Expenses.

The capitalization amounted to the following amount which is so large as to be hardly understandable:—

Stocks	$749,207,687
Funded debt	779,481,514
Total	$1,528,689,201

	Passengers carried.	Freight tonnage carried.
1909	32,683,309	66,842,258
1911	37,097,718	79,884,282



J. L. ENGLEHART.

The following amounts were paid to employees of railways for labor:—

	1911.
Maintenance of way and structures	$18,157,696
Maintenance of equipment	15,544,057
Traffic expenses	1.564.399
Transportation expenses	36,832,034
General expenses	2,515,552
Total	$74.613,738

In 1909 the total was $63,216,662, and the ratio of gross earnings and operating expenses of total wages is shown below:—

	1910. %	1911. %
Ratio of gross earnings	38.61	39.53
Ratio to gross expenses	55.8	56.9

and is still mounting upwards.

The number of employees operating railways is 141,224—not including construction work.

Demands made upon Transportation Companies.

Are the developments of the Dominion, and this construction of railways, are the efforts put forth, the efforts of the past ten years, to continue? If so, then we are justified in asking for co-operation.

Transportation is largely the question of the to-day of the to-morrow. Statistics show that railways have been practically re-built, rails, engines, rolling stock, ties per mile, telegraph and telephone, augmented to an extent that is hardly understood by even those who are interested in the matter. Stations, terminals, sidings, and buildings being enlarged, rails increased in weight, with these the other manifold demands that are made upon transportation companies of the day, call for largely increased capital expenditure. In very many instances, an addition of half, if not doubling the original capital.

Have tariff rates, passenger and freight, been increased? The answer is no.

Must Be Co-operation.

Co-operation is permitted in trades, in labor, in every line. That is right, as it is equitable, for the reason, if none other, that it largely replaces wastefulness engendered by unfair competition, which has spelt ruin to so many enterprises.

In the present-day rush much of this has been forgotten by capital, labor, producer, consumer, manufacturer and the farmer. Each and every one has been enabled to improve their position, as well as the surrounding conditions. Then why not enlist, and work for the common weal, or accept the common woe, that transportation is sure to fall into, unless better counsels prevail.

Why cry out against the good work that has been, is being, done by those who labor, and it is a labor, a ceaseless labor, of those who are in charge of transportation.

Consider what it would mean to you, to every one, in the face of the statistics that have been noted, if the problem of transportation were to be dealt with upon the narrow lines that appear to appeal to many. Instead of playing the game of clamor, why not aid and assist in improving the conditions.

Modern Conditions are Unparalled.

Every transportation official knows there are shortcomings, every official is alive, as never before, to bettering the conditions. With passenger rates to-day, averaging per passenger, per mile, 1.94c., less than two cents per passenger per mile. With freight rates averaging per ton per mile 7.77 mills, less than eight-tenths of one cent. for moving a ton (2,000 pounds) one mile.

Under these conditions, how are transportation companies to exist, if they cannot meet expenditures by receipts?

Transportation to-day means facilities that were not in vogue in days that are gone, rolling stock of every class and kind, engines of abnormal power, to which must be added the hundred and one requirements to-day demanded, which were not thought of in the past.

Materially Assisted by Good Roads.

Transportation can be materially assisted by good roads, by diagonal roads. Expend million, yes millions, upon diagonal roads. With sufficient good roads, you will largely solve that all important question, transportation.

The motor vehicle of to-day, is as essential to the farmer, the merchant, as to the reaper, the mower, or the thresher. The use of the motor would materially assist in arresting congestion. Many merchants to-day utilize motors for deliveries, saving dollars and cents.

The delivering of merchandise, direct to the merchant or consumer by motor cars means a saving all round. With good roads, producers, farmers, manufacturers, can deliver less than carload lots, as well as carloads to central points, where the less than carloads could be transferred into carloads, transported with less transhipment, without breaking bulk and without transfer from one car to another. The motor car would largely serve the necessity, arresting congestion, if not removing it entirely.

That is the problem, to handle the many cars. That is the question that worries transportation men. Transportation companies have enlarged—are enlarging—every possible facility—terminals, sidings, motive power—but it is becoming a physical impossibility to transport the products of to-day within the time expected. Duplicating present facilities will not move the crops, between the period of threshing, the close of navigation, or the coming of Jack Frost.

No more can shipments in less than carloads lots nor for that matter in carload lots be delivered to the markets, in the time that shippers demand. Neither power, rolling stock, terminal facilities, or tracks are adequate to meet such conditions. But with good diagonal roads, with motor cars, a revolution in transportation will be affected, largely decreasing less than carload shipments, lowering rates of freight, improving the facilities of transportation, removing, largely, the necessity of railways furnishing their cars for warehouseing purposes, either to shipper, or merchant, who delay their orders for supplies until about the last day, if not hour, then clamor for delivery, while their own shortsightedness, their own pockets have all but forced the railways into a state of congestion.

Notwithstanding the largely increased number of miles of sidings, and terminals, enlarged warehousing facilities, extra trains, heavier engines, larger cars, congestion is a burning question and will be until the merchant, the shipper, the farmer, the producer, as well as the consumer, in fact till every one pulls his pound not for personal requirements but for the general good.

◆

PROSPERITY AND COMMODITY PRICES

Analysis of Their Relations—Are We Over-burdening Industry by Capitalization?

BY R. H. COATS, F.S.S.

One of the most difficult things to measure is business sentiment and the basis for it. Optimism and pessimism succeed each other in the business world, but just why, when it comes to a question of degree, is always more or less of an enigma to the average man. The forces that act on trade for buoyancy or depression are so varied, and their inter-action so complex, that the effect in almost any event is open to guess. The best one can do is to observe closely and to see that one's judgment is based on as broad a foundation as possible. Anything that helps in this process of widening the view is especially valuable.

R. H. COATS.

Perhaps the most convenient means of obtaining a "line" on trade tendencies is through a well-balanced record of prices. Prices are the ultimate mathematical expression of business sentiment. Stiffening prices are, generally speaking, an accompaniment of active trade, and falling prices of trade stagnation. Prices, of course, may reflect many things besides the tone of business. They have always to be observed not only accurately but scientifically and in detail, that is, with due regard to the relative importance of articles and groups of articles, and in close connection with accompanying phenomena. Whether, say, a failure in production or an increase in demand is the underlying cause of a particular advance; whether the change in question is Canadian or continental or world-wide; whether the lead in a general movement is being taken by raw products or by manufactured articles; these and similar considerations are of the utmost importance in attempting to gauge the significance of price variations. Vague general ideas as to advancing or declining cost of living may work great injury; they are in fact the cause of most of the misunderstanding between employer and employee where a rise or fall in wages is involved. Only when data are representative if not comprehensive is a judgment worthy of the name possible.

During the past eighteen months Canada has been swept by a wave of prosperity as pervasive and penetrating apparently in its effect as any within like time in her history. Trade and public revenues have increased, labor has been well employed at advancing wages; while back of all has been a continuance on an enlarged scale of the heavy immigration and active development which have been characteristic since the opening of the century. It may be interesting to analyze this general movement in the language of the prices which have prevailed since the middle of 1911.

The accompanying diagram is based on the Department of Labor's index number for a year and a half past. It covers altogether about 260 representative commodities—farm products, lumber, minerals, and other raw materials; meats, fish, groceries and other foods; textiles and leather; implements, house furnishings and various manufactured articles. The basis of comparison is the decade 1890-99, the numbers at the side of the graph indicating percentages of the general level which prevailed during that period.

Comment on the general showing of the diagram is unnecessary. As if in confirmation of the statement as to the prosperity of the country, prices were steeply upward from June 1911 to June 1912, with a slight recession since. Altogether the chart shows perhaps the most sharply accentuated upward curve in the long series of advances that have characterized the price-line since 1896, in which year it stood at 92, or 34 points lower than in June, 1911, and 45 points lower than in June, 1912. But, as already remarked, it is not in generalizations of this broad kind, but in the analysis of the component parts of a diagram like the present, that the business man will find his chief enlightenment. Much space could be devoted with profit to such an analysis; only the briefest outline is possible here.

The chief cause of the abrupt rise in the line, which is shown in the autumn of 1911, and the first half of 1912 was undoubtedly contributed by farm products. Grains and fodders were very sharply upward. For this the drought in Ontario and bad harvesting weather in the West were chiefly responsible. Simultaneously, the world demand for gains continued exceptionally good. With the coming of winter, the freight congestion in the West and favorable reports from Argentina (later proved exaggerated) added to the upward impetus. In animals and meals the feed scarcity caused a rush to market in the fall of 1911 which brought temporary declines, especially in hogs, but which naturally resulted in extreme scarcity in the winter, spring, and summer months of 1912. Poor pasturage and a cold winter set milk and butter prices soaring, till relief was brought by the unprecedented expedient of New Zealand importations. The usual spring relief in this branch was late in coming. Flour and oatmeal followed the course of wheat and oats, and malt that of barley. The high price of potatoes and other vegetables, fresh and canned, was an incident bearing heavily on cost of living. Sugar was very high through crop failure in Germany, though Cuba later saved the situation. General groceries were high. All this, with advancing rentals, was at the root of the increases in wages which were on a more general scale during the spring of 1912 than at any time since 1907. The chief offset was in the large 1911 crop of cotton, though even here the active demand from the mills caused an early strengthening of prices. Textiles generally. Leathers and boots, on the other hand, advanced.

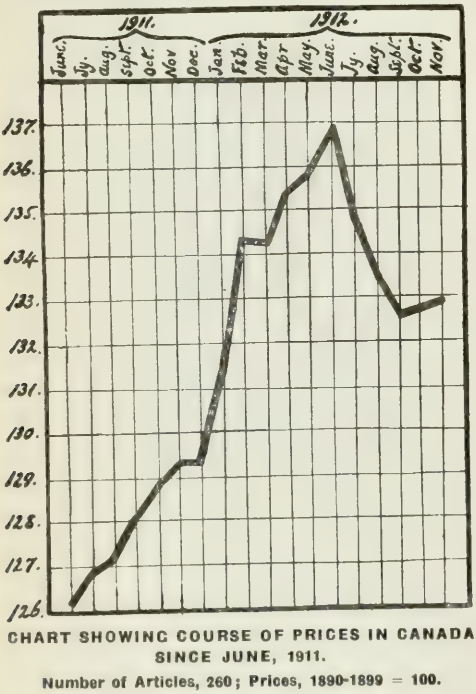


CHART SHOWING COURSE OF PRICES IN CANADA SINCE JUNE, 1911.

Number of Articles, 260; Prices, 1890-1899 = 100.

What the Figures Prove.

Turning to metals and building materials, the same story is told. Tin, copper, lead, and spelter have been scarce and dear. Iron and steel, which were low in the United States, developed strength in Canada. The coal strike in England, in fact, strengthened all metals. Lumber which was dull in 1911 has been advancing in 1912. Srikes in the Crow's Nest Pass and transportation difficulties in Pennsylvania have sent up coal prices over the most of Canada.

Thus far the price record cannot be said to afford grounds for congratulation, but rather the reverse, in the rise which is shown as so prominent during the first and major part of the past eighteen months. That diminished production on any large scale is a disaster may pass for a truism, and a rise in prices which results from such a cause can certainly not be set down as a sign of prosperity. Ordinarily, in fact, such a diminution, is followed by reduced spending power in the population, which at once checks demand and thus through lessened consumption tends to maintain prices at an equilibrium. How is it then that, in spite of a setback which some years ago would have been serious, Canada has been able in 1912 to go on as before, maintaining her consumption, meeting collections promptly even in lines like farm implements, keeping her factories running under circumstances that would once have spelt stagnation and unemployment, and thus giving the price line loose rein to reflect scarcity of product alone?

The answer to so big a question is difficult, and dogmatism is always dangerous here, but it probably lies mainly in the extraordinary expansion and progress still under way, and the unimpaired borrowing capacity of the country. The extensive railroad construction and municipal undertakings we have at hand, and the general outpouring of capital and industries of every description is no doubt the factor which prevented the high price situation of the first half of 1912 from correcting itself, at least to some degree, in the usual way. Hence the striking character of the rise shown in the diagram.

Industry and Capitalization.

In considering the outlook, it is very necessary that a situation of this kind should be clearly understood. This is not to say that our western expansion and the spending of capital in development work east and west is to be viewed with suspicion. It does imply, however, that the importance of this process as a dominating factor in our prosperity should be fully recognized, and that every care should be exercised to assure a satisfactory answer to the questions which it prompts. Are we over-burdening industry by capitalization? Is the continued inflow of capital assured, and if it should cease could our agricultural, lumbering, mining and manufacturing industries carry the load in the event of serious crop failure?

It is of good omen to note that since July last, with the assurance of a good crop year, the trend of prices has been downward, though not to the point of a year ago. At least if the demand for materials for expansion continues we are to have more of the wherewithal in the shape of wealth produced in Canada instead of borrowed from abroad, with which to meet it.

◆

That part of the district of Keewatin, added by Act of Parliament of Canada in 1912 to the territory of the province of Ontario, and now known as the district of Patricia, consists of over 146,400 square miles. Its area is about one and one-fifth times that of the British Isles, and nearly three-quarters that of France or Germany. Heretofore the districts of the Province lying north of the main line of the Canadian Pacific Railway and lakes Huron and Superior contained approximately 182,000 square miles, or, excluding the water area of Lake Superior, 171,000, the whole of Ontario having had an area of about 260,862 square miles. The new district adds over 56 per cent. to the area of the Province. The three largest provinces of the Dominion now are Quebec, including Ungava, 706,834 square miles; Ontario, 407,262, and British Columbia, 357,600. The district of Patricia is bounded on the west and northwest by the province of Manitoba, on the south and southeast by the English and Albany rivers, and on the east and north by James and Hudson bays. Ontario now has a seashore of over 600 miles in length.

WESTERN CANADA'S INDUSTRIAL DEVELOPMENT

Analysis of Manufacturing Position—Dearth of Labor is an Important Factor—Problem of Freight Rates

Since the publication of the census figures, newspapers in both sections of the Dominion have been actively discussing the matter of the growth of manufacturing in Western Canada. Dividing the provinces into Eastern and Western, the value of manufacturing products as in 1900 and 1910, compare as follows.

Eastern Provinces.

	1900.	1910.	Increase.	%
Ontario	$241,533,486	$ 578,763,118	$337,229,632	1,0
Quebec	158,287,994	350,901,656	192,613,662	122
Nova Scotia . .	23,592,513	52,706,184	29,113,671	123
N. Brunswick .	20,972,470	35,422,302	14,449,832	69
P. E. Island .	2,326,708	3,136,470	809,762	35
Total East . . .	$446,713,171	$1,020,929,730	$574,216,559	128

Western Provinces.

	1900.	1910.	Increase.	%
Brit. Columbia . .	$19,447,778	$ 65,141,235	$ 45,693,457	235
Manitoba	12,927,439	53,673,609	40,746,170	315
Alberta & Sask. .	1,964,987	25,030,958	23,065,971	1,174
	$34,340,204	$143,845,802	$109,505,598	319

Taking all four of the Western Provinces the ratio of increase is much higher than that shown for the Eastern half of the Dominion. And it is to be observed that while the manufacturing products of the West in 1901 only amounted to 7.1 per cent. of the products manufactured by the whole Dominion, their proportion in 1911 amounted to 12.4 per cent. of the whole. The comparative standing of the two sections and of the respective provinces comprising them is shown in the following table:

Proportion of Manufacturing Output.

Eastern Provinces.

	1900.	1910.
Ontario	50.2%	49.7%
Quebec	32.9%	30.1%
Nova Scotia	4.9%	4.5%
New Brunswick	4.4%	3.0%
P. E. Island	.5%	.3%
	92.9%	87.6%

Western Provinces.

	1900.	1910.
British Columbia	4.0%	5.6%
Manitoba	2.7%	4.6%
Alberta and Saskatchewan ...	.4%	2.2%
	7.1%	12.4%

As regards the proportion of the total output, every one of the Eastern Provinces shows a slight decrease and every one of the Western Provinces shows an increase. Even when allowance is made for the fact that in the cases of Alberta and Saskatchewan the percentage increases are very large because the two provinces had practically no manufacturers in 1900, the showing is creditable indeed to the Western half of the Dominion.

It is well known that the great increase in population of the Western prairies has been one of the principal causes of the increase in Canada's industrial equipment. It is also well known that in a considerable number of instances important industrial plants have been established in the East with the object of manufacturing chiefly for the Western Canadian market. The census figures showed that in the decade the population of the Western provinces increased about 175 per cent., while that of the Eastern Provinces increased but 15 per cent. It must then be considered as remarkable that the East continued to hold so large a proportion of the manufacturing industry notwithstanding its relatively small increase in population. Thus it will be seen that Ontario contributed practically half of the total output in 1910 and that the province held its ground during the decade; and in case of Quebec the falling off amounts to only 2.8 points.

Per Unit of Population.

This line of reasoning suggests another table comparing the two divisions of the Dominion in the matter of manufacturing output per unit of population:

Eastern Provinces.

	Population 1901.	Output per unit of pop.	Population 1911.	Output per unit of pop.	Inc. per cent.
Ontario	2,182,947	$111	2,519,902	$230	107
Quebec	1,648,898	94	2,000,697	175	86
Nova Scotia ..	459,574	51	461,847	114	123
N. Brunswick ..	331,120	63	351,815	101	60
P. E. Island ...	103,259	23	93,722	33	43
	4,725,798	$ 95	5,427,983	$188	98

Western Provinces.

	Population 1901.	Output per unit of pop.	Population 1911.	Output per unit of pop.	Inc. per cent.
B. Columbia ...	178,657	$109	362,768	$180	65
Manitoba	255,211	51	454,691	118	131
Alberta & Sask. .	164,301	12	826,427	30	150
	598,169	$ 58	1,643,886	$ 87	50

This table shows clearly that the energies of the population of Eastern Canada are devoted to manufacturing in a much larger degree than are the energies of the people of the West. Thus the manufacturing output of Eastern Canada amounted to $188 per unit of population in 1911 as against an output of only $87 per unit for the West. The output of the East per unit of population practically doubled in the decade while the Western output per unit increased but 50 per cent. In other words the growth of manufacturing in the East, measured by unit of population, is double the growth of manufacturing in the West.

Advantages and Disadvantages.

This brings the argument to the matter of the manufacturing disadvantages in the West and the corresponding advantages in the East. The Manitoba Free Press mentioned a few of the circumstances which often make it advantageous for a manufacturer to locate his plant in Eastern Canada, and which therefore militate against the growth of manufacturing in the West. In recapitulating the advantages which the Eastern manufacturer has, the the Free Press said "Freight rates help him; labor conditions are more favorable; interest charges are lower; banking credits on the whole more easily obtainable." On the other hand the Westerner enjoys the advantage of "contiguity to great and expanding markets," and, according to the Winnipeg paper, in the possession of courage and foresight enabling him to seize the opportunity thus presented.

In some instances the Easterner has also a great advantage in the proximity or accessibility of cheap water powers and in his ability to draw materials by water from various foreign countries. But in the matter of cheap power some Western towns and cities are situated as advantageously as are the great industrial centres in Eastern Canada. Then there are the unfavorable labor conditions which serve to hinder the development of Western industry. Whenever they move one of their employees from an Eastern branch to a Western branch some banks are obliged to make a special allowance of $200 or $300 per year to cover "the increased cost of living." Others endeavor to meet the extra cost of living by increasing the permanent salaries of officials moved West. The Western cost of living hits the working man as hard as it hits the bank clerk. When the working man goes West to take a job he finds rents and necessary services high and food dear. He must have higher wages. On this account many industries in which the pay-list or wage sheet constitutes a large proportion of the cost of manufacture, cannot get a footing in the West at all.

Some Problems to be Worked Out.

Some authorities state that when the Panama Canal is in operation European laborers will sail to Vancouver almost as cheaply as they can now sail to New York; and that consequently British Columbia and the West will then receive a vast supply of cheap white labor, to the great advantage of Western industries in general. Possibly there will be an increase in the supply of labor available at the Coast after the canal has been in working order a little while, and wages may tend downwards as a result of the competition thus introduced to the labor market. But it seems that the only permanent or satisfactory solution of the labor question in Western Canada will come about through the reduction of the cost of living. And the question is how may that be effected? Perhaps an improvement might be seen if the speculation in suburban lots would subside. Money is growing scarcer and dearer in the great world centres; and tight money often serves to prick speculative bubbles. It will not be an unmixed evil if a decided fall takes place in prices of real estate in and around a number of Western cities, if by reason of such fall the Western workingmen are able to enjoy cheaper houses. Then, as regards food prices, increased production is one factor that should certainly bring about an improvement in the course of time. Every year the West is increasing the volume and variety of its products.

High Freight Rates.

The problem of the freight rates has been, and is still, engaging a large share of the attention of Western editors and laymen. As reduced freight rates would mean a lower cost of living and a lower cost of production and manufacture, it is natural that the agitation for a lower freight tariff should be strong and persistent. Since the Canadian Pacific Railway filed its application for parliamentary authority to increase its common stock issues by $60,000,000, it has been strongly urged in the West and in the East that the Canadian Pacific Railway should not be allowed to issue stock to its shareholders below the market price, and that the Federal Government should intervene arbitrarily and reduce Western freight rates. Now it is quite possible that even if the West were successful in stopping the distribution of stock bonuses to Canadian Pacific Railway holders and in securing a government order for a drastic reduction in freight rates applying to Western Canada, its success in these matters would not prove beneficial in the long run. Taking first the matter of an arbitrary reduction of freight rates, such reduction could not, of course, apply only to the Canadian Pacific Railway. It would not be possible, in other words, to say that the Canadian Pacific Railway should reduce freight rates 10 per cent., the Canadian Northern 5 per cent., and the Grand Trunk Pacific 5 per cent. All roads would have to be treated alike. Hence the remark made in an Eastern paper not long since that in the question of lower freight rates in the West the later and more pioneering roads are more concerned than the Canadian Pacific Railway. If a big reduction in rates were made what would be the effect? It might be possible for the Canadian Pacific Railway to go ahead with new construction work, but the newer roads would certainly be embarrassed. Their credit in London would at once be affected. London bankers would perhaps have doubts regarding their ability to earn the interest on their bonds, and new capital would be procured with increasing difficulty.

One effect of the rate reduction might therefore be to permit the Canadian Pacific Railway to go ahead with its expansion while its rivals' plans were stalled. Or, if the Canadian Pacific Railway found that the rate reductions were so heavy as to deprive even it of a reasonable profit, then the company would be likely to cease its expenditures in the West and railway development in that part of the Dominion would be at a standstill until profitable rates were restored.

For high Western freight rates it would seem that the true remedies are the development of strong competing systems and the development of the local, or short-haul, traffic. In other words, the West should encourage the building of lines and the extension of the systems of Canadian Pacific Railway, Canadian Northern Railway, Grand Trunk Pacific and the Great Northern, Northern Pacific, and any other American lines that could be induced to enter Canada. If freight rates are too low there would be no incentive to build. If there are harassing restrictions upon capital issues that tends to keep down the construction of new mileage.

While any one can see that it is advisable to encourage the development of strong competitive railway systems, it should also be clear that the West should be extremely careful about embarking borrowed capital in railway enterprises that will not prove profitable or productive. If a large amount of capital is wasted or lost in this manner the natural effect would be to delay or retard the lowering of freight and passenger rates.

Coming finally to the disadvantages of a comparatively high interest rate and the comparative difficulty of procuring banking credits, these, too, are nearly always encountered by new and rapidly growing communities. As they grow older the Western industries will find these disadvantages growing less troublesome. With reference to the interest rate, what drives it up and keeps it up in the West is the clamorous demand for money and credits. This demand is encountered everywhere in Western Canada. Under present conditions, when the financial institutions dump $10,000,000 or $20,000,000 of new money into the West, their action in so doing seems merely to create fresh demands which may aggregate $30,000,000 or $40,000,000. In other words the Western demand for credit is practically insatiable. The banks, insurance companies, loan and trust companies cannot hope to supply it in full or to satisfy it. So interest must be comparatively high. And with reference to the difficulty experienced by newly established industries in getting bank credits, that, too, is something which will gradually disappear as the various industries demonstrate their ability to prosper or earn profits.

CANADA'S IRON AND STEEL INDUSTRY

Large Imports from the United States Created an Unfavorable Market for Domestic Plants—Tariff Considerations

BY THOMAS CANTLEY.

The iron and steel manufacturers of Canada, during the first three quarters of 1912, while operating at their fullest capacity, were forced to accept for their products prices before unheard of, and which, in many cases, were less than the actual cost of production.

Conditions were, indeed, unique. The consumption of iron and steel, in connection with the railway and engineering projects of the country was greater, and the demand therefore larger than ever before in our history. The iron, steel and engineering trades of Great Britain, Germany, and Belgium were in a highly prosperous condition, and there prices continued to advance throughout the whole of the year. In these circumstances, it would have been natural to suppose that with higher prices abroad, and enormous demand at home, satisfactory prices would have been obtained by our local manufacturers. That such was not the case, was due entirely to the conditions of trade in the United States and the action of the iron and steel manufacturers in that country, who, during the first half of the year, made desperate efforts to dispose of, in Canada, as large a proportion of their product as possible; and that, apparently, quite irrespective of profit or even of cost of production.

Canada as a Dumping Market.

The extent to which Canada was utilized as a dumping market, is evident from the fact that of the entire export of pig-iron by the United States last year, 90 per cent. was thrown into Canada, while of finished products an enormous tonnage was disposed of in the same market at prices in many instances twenty to twenty-five per cent. below that at which they were selling raw pig-iron some five years previous.

August saw some slackening in the scramble by United States mills to sell. By October, the Canadian consumers who had contracted in the United States, found it difficult to get deliveries, even though willing to pay a premium of several dollars a ton for prompt delivery of tonnage, due them for domestic steel.

Inadequate Customs Tariff.

Following these conditions, prices improved materially, and the last quarter of the year showed considerable improvement in some directions, though several of the Canadian mills probably had their order-books filled for several months ahead at unremunerative prices. Thus, notwithstanding the enormous home demands, coupled with good trade and high prices in Great Britain, Germany and other European countries, owing to the ill-judged action of the United States producers, and the inadequate customs tariff applying to a considerable percentage of steel products imported from the United States, Canadian mills and forges find their earnings much less than they should have been under normal conditions.

The Canadian demand for steel for railway construction and renewals, car-building, and structural and manufacturing purposes, is now greater than ever before in the history of the country.

Increase of Supply and Demand.

A study of the trade reports shows that the consumption for the first half of 1912 was over thirty per cent. greater than the corresponding period of 1911, while the increase in the production of iron and steel in Canada was probably in the vicinity of fifteen per cent. greater than that of the previous year. From this, it would appear to follow that while Canada's productive capacity increased during the past year at the rate of fifteen to twenty per cent., the country's demands increased at about double that ratio.

Had conditions in the United States been more stable, or had our customs tariff been fixed on such a basis as would equalize matters, the results of the year's operations would have been more satisfactory from three important points of view, i.e., the profit earned by the Canadian works, an adequate supply, as wanted, of railway and structural material, and the adequacy of the productive capacity with the consumption requirements of the country. To ensure this position in Canada, a readjustment of the metal tariff is imperative, and the readjustment should be such as will give a reasonable amount of protection, taking into account the increased labor, assembly or distribution costs in comparison with those of foreign competing countries.

Last year witnessed the completion for the Grand Trunk of two important buildings in the city of Ottawa—viz., the Chateau Laurier and the Central passenger station.

DEPOPULATION OF RURAL ONTARIO

Country Sections of a Fertile Province With Manifold Attractions is Losing Its Young Men and Women —Magnet of Western Canada—Suggested Remedy and Action by the Government

[Both Sir George Ross and Mr. John Gault were asked to contribute to the annual number of The Monetary Times, the choice of subject being left to them. Both gentlemen, by a coincidence, chose the question of the rural depopulation of Ontario. Sir George Ross, at one time premier of Ontario, is well qualified to discuss the subject. Mr. Gault, a former banker, knows both Eastern and Western Canada, as does also Sir George, and has interesting views on the matter. Both writers agree on the main cause of the depopulation, and both suggest immediate action by the Ontario Government.—Editor, Monetary Times.]

BY SIR GEORGE ROSS.

While it is gratifying to notice that the population of Canada has increased in the last decade from 5,371,315 to 7,294,772, or an increase of 34 per cent., I think it will be regretted by every thoughtful Canadian that this increase has taken place largely at the expense of the rural population. The last census shows that in 1901 the rural population was 3,349,516 and the urban population 2,021,799, whereas in 1911 the urban population was 3,280,444 and the rural population 3,924,328; that is, an increase of 17.16 for the rural population and 62.25 for the urban population. It is not to be assumed that this disparity between the increase of the urban and the rural population is altogether owing to the transfer of the population of the rural districts to our cities and towns.

The large proportion of the increase in our cities and towns is no doubt owing to the development of our manufactures and to the acquisition of a larger share of the immigrants from the manufacturing districts of the Old Land. The foreign artisan is naturally seeking employment in this country in the same sphere of life as he occupied at home, and the immigration returns shows that this immigration was greater from urban centres than from the rural districts, either of Great Britain or the Continent. On a close analysis, however, of this de-population, it appears that a considerable shrinkage has taken place in the rural population of Ontario as the following table shows:—

	1901.	1911.
Bruce	59,020	50,032
Dufferin	21,036	17,740
Frontenac	24,746	21,944
Grey	69,590	65,891
Hastings	59,291	55,803
Huron	61,820	53,983
Lambton	56,642	51,432

These are the most conspicuous instances in which a reduction has taken place. Other counties, such as Middlesex, Northumberland, Perth, show a decline, but not to the same extent. In some other counties the increase of the rural population is merely nominal. in a few the increase of the rural population is substantial.

Still Under the Flag.

The cause of this decrease may not be hard to seek. The opening up of the West, with its cheap farms and abundant harvests, attracted a great many farmers, particularly the younger members of the family, to its newly-discovered Eldorado, and there is scarcely a district in the West in which the sons of Ontario cannot be found occupying tracts of land from a quarter to a full section. Their loss to Ontario is no doubt a gain to the West, the only consolation being that they are still under the Canadian flag. In other cases, owing to the rapid development of our industries and the great demand for clerical and other help, many young men and women are attracted to our cities, where they no doubt contribute to the wealth of the country in their new vocation, but the fact remains that Ontario is the loser in a most important department of development and industry. What has been the effect of this de-population:—

(1) Large areas of land of the finest quality, formerly taken up with the cultivation of cereals, are now turned to grazing farms. It may be a question for the political economist to settle, whether the raising of cattle on these farms gives a return equivalent to their produce under the old system.

(2) The consumers of manufactured goods in the rural districts have been greatly reduced owing to the diminution of the population.

(3) Where considerable labor in agriculture was formerly employed, farming is now conducted with a minimum of labor, and these circumstances also have tended to reduce the population and its consuming capacity.

(4) Although Ontario has a surplus still of agricultural products, the demands of the urban districts are so great in proportion as largely to enhance the price of food. Although there is no scarcity, the surplus being reduced affects competition and greatly affects prices.

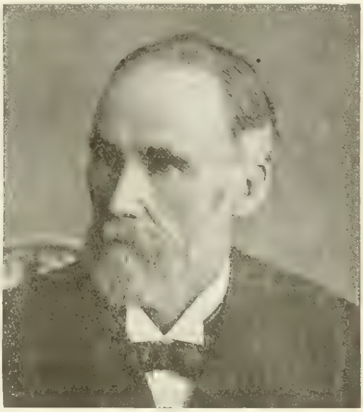
(5) The physical and material stamina which is universally admitted pertains to life on the farm must be seriously affected and the dynamic force of the whole country considerably reduced.

Is There a Remedy?

Is there a remedy for this condition? Several answers may be given to that question:—

(1) The greatest effort should be put forth by the immigration agents of Ontario and all Canada to secure a larger contingent of immigrants from the rural districts of Great Britain and the Continent.

(2) Every possible stimulus should be given to the farmer to adopt the most modern methods of agriculture, and thus secure from the soil the most favorable results.



SIR GEORGE ROSS.

(3) Such changes should be made in the system of agriculture as would render the work of a laboring man on the farm more profitable than it now is.

(4) Some method for actual assistance by the Government should be given to the farmer to erect a cottage on his farm for his employees. There is little inducement to a farm laborer to give the full strength of his service during the summer months and then be obliged to seek other employment during the winter. With a cottage on the farm which he could call his home for the time being, he might look for permanent employment and settle down into all the comforts of a home where he could raise a family and feel secure from want. If this were done the problem of domestic help in rural districts would be at least partly solved, and the farmer's wife would have more leisure and be less of a drudge.

Loans to Farmers.

(5) It would pay the Province of Ontario to set apart, say, 2,000,000 to be loaned to the farmers at a low rate of interest for the erection of cottages for farm laborers to be repaid over a period of, say, twenty years. The principle in such a loan might be the same as that on which the Ontario Government loaned money for municipal and tile drainage. In easy payments the farmer could make more than the cost of such a cottage out of the additional labor than would pay both principal and interest. In no way could the energies of the Provincial Government be more profitably engaged than in saving to the Province of Ontario its rural population, and in no way could the consumers of farm produce be more greatly benefited than by the increase of the output of our dairies, our orchards, our farms and our gardens.

BY JOHN GAULT.

Natives of the Province of Ontario who have travelled much in it, and especially if they have visited the other Provinces of the Dominion, must be convinced that it is the Garden of Canada.

This is especially true of that portion lying west of Toronto. A journey from Toronto to Goderich or from Niagara Falls to Windsor displays a landscape which, for fertility and beautiful scenery, has few equals anywhere. Often I have heard visitors compare the undulating farm scenery of the county of Waterloo to the same class in England, and with good reason.

Ontario has a fine climate, with only moderate cold in winter, a balmy spring, long summer and mild, bright autumn. Its farms are fertile, its roads good—and being improved—its markets convenient, and its railways easy of access, so that the farmer has little of which to complain, except, perhaps, the question of labor, male and female. But that question is present everywhere, and difficult of solution.

Younger Classes Are Leaving.

Notwithstanding all these advantages, the population of the rural parts of Ontario is decreasing rapidly, and, unfortunately, amongst the younger classes. The older are left on the farms, which they are unable to work to advantage alone, and which, consequently, become less productive, and gradually leads to the point of less agricultural products for the cities, and the now too familiar cry of advancing prices.

Some will say the population of Ontario is increasing. So it is, according to the census returns, but it is only in the cities and large towns that this is the case. Many of the finest and most fertile of the Ontario counties showed large reductions of population between 1900 and 1910. The cause is not far to seek. So much is heard of the fertility of the Western provinces, the cheapness of land, the easy farming and the energy of our great railways to obtain traffic that most of our immigrants and many of our Eastern farmers are attracted there.

JOHN GAULT.

Our bankers in their annual addresses to their shareholders and our public men generally praise the North-West so that immigrants think there is no other place in Canada good enough for a settler.

Want More for Ontario.

Nothing is said in favor of Ontario, and the result is, as I have said, there is an exodus from the farming counties and settlers pass us by. I venture to say that in Ontario, with its climate, fertility, diversity of products, markets, roads and railroads, a settler is at least equally well off as in the North-West. I need not make comparisons. It may be said conditions are changing and land is cheaper in the West; but I am writing of the present, and I am sure a good farm in Ontario, with dwelling-house, barn and other buildings, well fenced, drained and cultivated, suitable for grain and vegetables, grazing, with wood and good water, and which can be bought for $50 or $60 per acre, is as cheap as the land of the West. Farm land in Ontario is not worth half what it was twenty-five years ago. Our energetic premier should take up the question and do something for Ontario. Let him direct the well-to-do farmers of Britain to the provinces many advantages for them, and the wealth in it, which is open for anyone capable of intensive farming.

MUCH RAILROAD CONSTRUCTION LAST YEAR

It Involved an Estimated Expenditure of Over One Hundred Million Dollars

A small army of men using many tons of materials and together representing expenditure of about $115,000,000 were the leading factors in considerable railroad construction last year. Construction of the 460 miles of Canadian Pacific's projected branch lines, together with main line improvements, and Pacific coast terminal facilities, will cost $45,000,000.

Grand Trunk Pacific.

A little less than half of the remainder of the $115,000,000 expenditure, or about $30,000,000 is being made by the Grand Trunk Pacific in completing its lines between Athabasca River, 1,027 miles west of Winnipeg and the coast, and erecting stations, merchandise storage-warehouses and terminal facilities.

The Canadian Northern spent between $28,000,000 and $30,000,000 on new construction work last year, a considerable part of which was in the central section of Canada and at Montreal, where work on a large terminal station, to cost about $25,000,000, will be commenced in May. Last year's share of the terminal construction cost will amount to about $2,500,000.

The remaining $8,000,000 to $10,000,000 of the $115,000,000 programme was consumed in the construction and improvement of rail lines chiefly in the province of British Columbia and on preliminary construction work on the Hudson Bay Railroad, from La Pas on the Canadian Northern northeast to Fort Nelson. This road, the government estimates, will cost about $25,000,000.

Over One Thousand Miles.

The Canadian Northern Railway built last year about 1,053 miles of new track in different parts of Canada and employed 25,000 men. The following is the programme of construction in detail: Montreal to Hawkesbury, 58 miles; Ottawa to Ottawa River, 32 miles; west from Ruel, Ont., 100 miles; east from Port Arthur, 108 miles; branch lines and extensions in Alberta and Saskatchewan, 400 miles; British Columbia, 75 miles; Sydenham, Ont., to Ottawa, 80 miles; relaying track on main line west, 200 miles. Total mileage, 1,053.

◆

LIVE STOCK INDUSTRY AT TORONTO

In 1883 the total live stock receipts at Toronto were:—34,807 cattle, 49,015 sheep, 11,019 hogs, while for the present year it is estimated that there will be received at both markets upwards of 210,000 cattle, 150,000 sheep, 500,000 hogs, 45,000 calves, 20,000 horses, making a comparison in money values between this period—twenty-nine years—the 1883 receipts work out to about $2,000,000 while those for the past year were approximately $35,000,000.

Of the live stock received last year it is interesting to show their disposal after having passed through the markets. The following table shows how many were taken by the city packing houses; by the outside packing houses in other cities; by the numbers taken by city butchers; those taken for export; those going back to the country as feeders, and those taken for dairy purposes:

Taken by	Cattle.	Hogs.	Sheep.	Calves.
City packers	108,749	448,755	68,610	13,182
Outside packers ...	25,152	27,555	4,219	260
Toronto butchers ...	37,494	17,003	65,087	31,544
Exporters	21,366	.....	9,810	.....
Feeders	15,170	776	836	40
Dairies	2,015	.....	.....	620
Total	209,946	494,089	148,562	45,646

In the city of Toronto there are killed weekly, under government inspection, 2,000 cattle, the products of which are shipped to all parts of the Dominion.

◆

PRODUCTION OF CANADIAN BEET ROOT SUGAR

From the three beet sugar factories in operation in Canada there was produced during the sugar-refining season of 1911-12 from Canadian grown sugar beets a total of 22,157,155 pounds or 11,078 short tons of beet root sugar, as compared with 20,612,276 pounds or 10,306 tons in the previous campaign of 1910-11. The three factories are situated at Wallaceburg and Berlin in Ontario, and at Raymond in Alberta.

TRANSPORTATION PRESENTS REAL PROBLEMS

Relationship of Railways to Community Life — Financial Position of Canadian Roads — Dominion Government's Intercolonial Line

By J. L. PAYNE

The expansion of railway interests in Canada might be said to have begun in earnest with the commencement of construction by the Canadian Pacific Railway in 1881. Since that year main track mileage has increased from 7,331 to 27,000 in actual operation, which is precisely 268 per cent. In 1881 the aggregate foreign trade of the Dominion amounted to $203,621,663, and last year it had reached $769,443,905. This increase represented 278 per cent. It is not entirely a coincidence that the advance of railway mileage and the growth of trade should have been in an almost equal ratio. The relationship between transportation facilities and commerce is intimate and far-reaching. If trade may be said to follow the flag, it is even more practically true that it follows the railway. The proud position of Kenora, Winnipeg and Vancouver to-day affords a striking demonstration of this postulate.

When sturdy efforts were being made in the eighties to develop the export trade of the Dominion in butter a member of parliament one day asked Dr. James W. Robertson, at a meeting of the Agriculture Committee, how far it was from Woodstock to Liverpool. "Half a cent a pound," was the trite and illuminating reply. That was a great deal better than talking about miles. The nearness of any particular market is always best expressed in transportation charges. It is the particular function of a railway to shorten the distance between the producer and his market in terms of dollars and cents. And that is exactly what it is doing in every day practise.

Routes and Reasons.

Before we get far away from this bread and butter aspect, it may not be inept to point out two rather suggestive facts: Last year we shipped 43,637,625 bushels of wheat by rail and steamer to Great Britain, as well as 1,884,655 barrels of flour—apart from what went out by American ports—where it was made into bread and sold at a lower price per loaf than it could be bought for in Winnipeg or Toronto. In so far as transportation was a factor in this surprising situation, it presents one of the mysteries of the long haul and the through rate. At the same time, New Zealand sent 489,359 pounds of dairy butter to Canada—agricultural Canada—and sold it as far east as Montreal at 40 cents per pound. This again was due to transportation facilities, cold storage, and the relatively low cost of carriage over a long distance. If anyone had predicted such a probability when our present dairy commissioner, Mr. J. A. Ruddick, went out to New Zealand in 1898 to teach the Antipodeans how to make butter up to the Canadian standard of quality, he would have been laughed at.

Distance is seldom the absolute governing consideration in determining a long haul freight rate; nor does traffic always take the cheapest channel. Time may be more important than miles in fixing the transportation charges, and market exigencies may compel the choice of the longest and dearest route. Last November, and in other months as well, millions of bushels of Canadian wheat went out by way of Buffalo and New York to Liverpool, although the distance by way of Montreal was materially shorter, and the water rate from Fort William to the Canadian seaport was at least three cents per bushel lower than was the combined water and rail rate from the head of lake navigation to New York. Why? Because the grain had been sold for delivery in Great Britain by a certain date, and Montreal had not the available ocean tonnage to handle it within the time limit. That was the chief reason for producing such an anomaly, and the high marine insurance out of Montreal was almost an equally potent element.

Operating Conditions Must be Considered.

When people discuss transportation issues in terms of miles, and do their figuring on the basis of lines drawn between two given points on a map, they are certain to miss the practical aspects of transportation by both rail and water. Given a favorable grade and good terminals, as against adverse operating conditions, and it may be said that one railway can move a million tons five hundred miles at a lower cost than another railway can move the same volume of traffic half that distance. Men have recently drawn a line from a certain point in Ontario to Montreal, and shown that the distance by way of these inland water channels capable of being canalized would be so many miles shorter than by way of the present lakes and St. Lawrence route. No one can dispute the geographical figures; but it is to-day a most intensely practical and vitally important thing to definitely ascertain whether or not a vessel drawing twenty feet of water could actually reach Montreal in less time by the proposed than by the existing waterway. Time, in such a case, would be the controlling consideration. In other words, the problem in this matter has to do with conditions of navigation as well as with distances. In asking the question, I am not presuming to give the answer; that must come from the men who handle big ships and big cargoes.

The economic relationship of railways to community life is neither generally nor accurately realized. On the one hand, everybody pays a transportation tax; and, on the other, everybody enjoys a countervail in the benefits which flow from transportation facilities. Last year the customs duties amounted to $73,312,368, or $10.10 per head of the population; while the railway freight bill alone of the Dominion was $126,570,534, or a trifle over $18 per capita. It is conceivable that some may entirely escape customs duties; but nobody can avoid the transportation tax. It is represented in practically everything one wears, eats, or uses in his home. It would only be by a negative experience that the value of our common railway service could be demonstrated to the people at large, and that experience would come in terrible form if to-morrow the trains ceased to run. Until such a calamity fell upon the land, it would be impossible to understand how closely the running of those trains is identified with all aspects of our daily life.

How Canadian Transportation Has Changed in a Few Years.

Directly and Indirectly Employed.

Last year there were 141,224 persons directly employed by the railways of Canada, and the remuneration they received—$74,613,738—represented the livelihood of at least 706,120; so that one individual in every ten was thus maintained. The indirect employment given by railways is also very large; for rails have to be rolled, coal mined, lumber sawn, steel bridges produced, ties cut, paint manufactured, and scores of other commodities turned out. Take coal and ties for the purposes of illustration. In 1911, the railways of the Dominion consumed 6,800,648 tons of fuel, at a cost of $20,182,103. Assuming that one-third of this is represented by mining labor, and that each miner earned $800 a year, it will be seen that 43,750 souls get their daily bread from the mining of coal for our locomotives. The consumption of ties is not less than 13,000,000 per annum, at a cost of probably more than $4,500,000. Taking it for granted that one man can get out ten ties per day, we have at once in this huge contract employment for 4,135 men, working 312 days in the year and earning the sustenance of a total of 20,675 persons. Indeed, if regard is had to the whole transportation situation on land and water, it is quite probable that one person in every seven, possibly one in six, finds his livelihood wrapped up in it. And in that we see another important economic relationship.

From these illustrative premises it is an easy step to the assertion of several broad and comprehensive propositions. In the first place, it is obvious that production without transportation facilities, would be largely in the nature of wasted effort. To have railways and to have markets is practically one and the same thing. To be without one is in a sense to be without the other. Railways stimulate production, because they bring buyer and seller together. They annihilate distance. They constitute the warp of modern commerce. They are the pioneers of colonization, as our own prosperous and fast developing West amply proves. They make prosperity possible where the wilderness would otherwise be, and then those who prosper sometimes turn around and complain if the railways themselves share in that prosperity.

The money side of railway interests in Canada brings us face to face with almost incomprehensible figures. Last year the capital liability attaching to our officially registered 25,400 miles of main trackage amounted to $1,528,689,201, and that sum is growing at the rate of $120,000,000 per annum. Very few people are able to grasp the magnitude of that liability. It was made up of $749,207,687 in stocks, and $779,481,514 in bonds. After making proper deductions for duplication, government owned lines and other items—the details of which could not be fairly presented in the space here available—it may be said that the stock and bond liability of our railways was equal to $55,829 per mile of road in 1911. That is lower than the capital liability of railways in any other country.

Financial Position is Sound.

Measured by all the accepted standards, I have no hesitation in saying that the financial position of Canadian railways, as a whole, is thoroughly sound. The investment side of the proposition is found in the outstanding bonds. The stocks stand for the speculative interest. To meet the charges on $779,481,514 of bonds, there were last year $57,698,709 of net earnings, which would be equal to 7.3 per cent. A steadily rising earning power per mile of line, joined to the swelling value of real property, affords first-class security for every dollar invested in the bonds of our railways. There are small roads which do little more than make income balance with outgo; but they have not created more than an unimportant fraction of the total funded indebtedness, and on a forced sale would realize, in probably every instance, the full liability. If mileage has increased by 268 per cent. since 1881, it is significant that gross earnings have within the same period gone ahead by 600 per cent., or from $27,987,508 to $188,733,494.

Yet there is another side to this matter of growing revenue. Year by year it is costing more to run our railways. Despite every measure of enterprise on one side, and economy on the other, operating expenses have increased faster than have earnings. Ten years ago it cost $1.028 to run a train one mile. Last year it took $1.460, or 42 per cent. more. This higher operating cost is very largely created by larger wages, and it would appear that the process of advancement, which began in 1898, is likely to continue. Without going into the matter of reasons or conditions, it is a shock to our settled notions about the law of supply and demand, that, whereas a locomotive driver in England cannot earn more than $80 a month, a locomotive driver in Canada can earn all the way from $150 to $300 a month. The same difference in scale applies to every class of railway employees.

Relation of Labor to Construction.

No one can fail to see that railway growth must continue. With 300,000 settlers a year pouring into the country the demand for the extension of existing lines and the building of new ones will be persistent and urgent. When it was observed in my opening paragraph that we had 27,000 miles of main track in the Dominion, that was only part of the story. There were 1,600 miles of second track and 5,500 miles of yard track and sidings—making a total of 34,160 miles of track all told. This would be enough to go around the earth, and provide for a double track across the continent as well. We must really be prepared for big things in the railway world during the next decade. There are not less than 7,000 miles of line now in process of construction, which means all the way between location work and readiness for traffic. Probably 3,000 additional miles are definitely projected. When the statistics for 1912 are issued they will reveal striking increases in mileage, earnings and tonnage.

The acute problem in connection with construction relates to labor. It is difficult to get a sufficient supply, and the cost is high. In the West the Grand Trunk Pacific is paying $3 a day for pick and shovel men, and it has to maintain them on a scale which would have been considered both impracticable and ruinous in the days when the Canadian Pacific was being pushed across the continent. It takes from 2,500 to 3,200 ties to the mile to build a fairly good road, and each tie in the West costs from 50 to 75 cents, according to quality. Two years after the late Hon. A. G. Blair took charge of the Intercolonial, the tenders showed a demand of 23 cents for cedar ties. "We must find a substitute for ties," said Mr. Blair, "for no railway can afford to pay 23 cents for ties." That was in 1899. To-day the Intercolonial is paying 35 cents for cedar ties—the very lowest price paid by any line—and it will inevitably have to pay more year by year. With labor at $3 a day and ties at 75 cents each, it takes men with courage and faith—incidentally with large capital—to construct railways in Western Canada.

Government Owned and Operated Railway.

Canada has 2,072 miles of government owned and operated railway. The Intercolonial stands for 1,450 of this, apart from the 269 miles attached to the Prince Edward Island Railway. The Dominion Government line has come in for a great deal of criticism, most of it hostile. The foundation for all this antagonism has been the fact that the road does not pay. The truth is—and I am prepared to risk my reputation and official status on this statement—that the Intercolonial does not pay for one clear and distinct reason, and only one: Its freight and passenger rates are too low. Given the rates of the Canadian Pacific, the Grand Trunk, the Canadian Northern or the Ontario Government system, it would earn a very large annual surplus. It is splendidly equipped, provides a high-class service, and, despite the small measure of waste inseparable from political control, is operated at a lower cost than is any other first grade railway in Canada. Some one who has not studied the situation will naturally ask: "If this is true, why does not the Minister of Railways raise the rates?" There are two cogent reasons why he cannot go far in that direction. First, the Intercolonial is not like any other railway in the Dominion, in that it is exposed to water competition throughout its entire length. Second, and of more vital importance, the government line is an integral part of the pact of Confederation, and was never intended to be a commercial enterprise. It is to the Lower Provinces what the canals are to the Upper Provinces, and costs the federal treasury less.

◆

CANADIAN TIMBER IN LONDON

Importations of Canadian timber to London, England, up to October 31st were as follows:—

From St. Lawrence Ports.

	1912. Pieces.	1911. Pieces.
Pine deals	457,000	307,000
Spruce	685,000	693,000
Birch planks	296,000	266,000

From New Brunswick, Etc., Ports.

	1912. Pieces.	1911. Pieces.
Pine deals	50,000	46,000
Spruce	355,000	397,000
Birch planks	334,000	223,000

◆

WORLD'S COTTON CONSUMPTION

The consumption of cotton for all countries during the year ended August 31, 1912, was 19,831,392 bales. Of this, 13,957,392 bales, or 70% of the total consumption, were of American origin. The United States mills took 27% of the world's consumption, which was 38% of its own production. Below are returns for 20 countries:

Consumption in Actual Bales.

Consuming countries.	Amer. growth.	East Ind. & Egyptian.	Sundry growths.	Total consumed.
Gt. Britain	3,289,976	369,778	105,708	3,765,462

CANADA'S OPPORTUNITIES IN BRITISH WEST INDIES

Geographical Position and Preferential Entry Into Most of the Markets Are Two Favorable Factors

BY ELWYN P. MOUSIR.

Amidst all the innovations and changes incidental to rapid growth and development, in all the events of the past year it is doubtful whether anything has occurred approaching in importance the closer trade relations brought about between Canada and the British West Indies. They evoked widespread interest not only throughout the Dominion, but throughout the Empire and the world—throughout the Empire because the agreements signed constitute one more link in that already almost all-embracing chain that is drawing the Empire's parts together in closer union, and throughout the world because they are one more indication to foreign peoples of the fast approaching time when all the peoples of the British Empire shall claim for themselves first right to the British Empire's business.

The agreements made also mark a new departure. The Preferential Trade agreements existing between all or some of the countries of Canada, New Zealand, Australia and South Africa are all of a somewhat restricted character, owing to the similarity of production in these places and the consequent necessity of protecting local interests. There was no such necessity, however, in the case of the West Indies and Canada, and the result is that Canada on the one hand, and several of the West Indian Colonies on the other, have agreed to accord preferences covering almost every article that each produces. In a word, the Canadian-West Indian agreements constitute by far and away the the most comprehensive system of Preferences yet in vogue inside the British Empire.

How Will Canada Benefit?

Dealing with the agreements from a purely trade point of view, the question naturally arises: To what extent can Canada expect to benefit by the agreements? The question cannot, of course, be answered with any exactitude. But in view of the comprehensive nature of the articles chosen for favored treatment, by considering the size of the West Indian markets at the present time, the resources the West Indies possess and their prospects for development, and remembering all the time the favorable position Canada occupies to them in ties of sentiment as well as geographically, a close idea can be obtained.

There are altogether fourteen colonies in the West Indies, if one includes Bermuda, the Bahamas, British Honduras and British Guiana in the West Indian group. Nine of these have entered into Preferential relations with Canada, and five have yet to do so. The nine with which agreements have been made, import $36,000,000 yearly, and the other five $22,000,000 yearly. Thus the imports into Britain's possessions in and near the Caribbean Sea total upwards of $58,000,000 a year.

Magnitude of the Markets.

The $58,000,000 mentioned means, that the West Indies import goods every year to the value of 70 per cent. of those imported by New Zealand, that they are equal to about one-third of the goods imported into the whole of British South Africa, including Natal, Cape of Good Hope, the Transvaal, Orange Free State, Rhodesia, Swaziland, Basutoland and Bechuanaland; that they are nearly five times larger than the total imports of Newfoundland and Labrador; and only $17,000,000 less than the total imports into the three combined countries of Bulgaria, Servia, and Greece, of which so much is heard at the present time.

So by making comparisons with other well-known markets do we have forced irresistibly upon us the magnitude of the markets the British West Indies have to offer. But great though their markets are, they are as naught compared to the dimensions their imports will attain in the next few years. The West Indies are on the eve of a period of development that bids fair to bring them once more near the position they occupied as the richest part of the Empire prior to the conquest of India. Their area of 110,116 square miles, only 10,000 miles less than the combined areas of England, Scotland, Ireland and Wales—and the possession of a soil that can produce rubber, cocoa, coffee, spices, fruits, sugar, hardwoods, and all the most precious things known to commerce, guarantees their capacity for development. The recent discovery of great oil fields in Trinidad and Barbados already indicate the wave of prosperity in store for those two Colonies

The sending of Sir Walter Egerton, one of the most brilliant administrators in the Colonial service, to British Guiana, expressly for the purpose of formulating schemes for development, indicates what Britain thinks of the future ahead of that wonderful Colony. Soon, too, by the opening of the Panama Canal, all the Colonies will be transposed from positions in or near the pocket of the Caribbean to positions in the paths of one of the world's greatest commercial highways, with the same beneficial results to them all that the running of more lines of railway would have on the prosperity of a city or town. The same cause will also lead to some of the Colonies becoming great distributing centres, which will not only lead to their securing the wealth that falls to places of this kind, but from the Canadian viewpoint, may also be expected to lead to their becoming great supply depôts for many of the Latin countries, when Canadian goods would be seen in places where they are at the present time utterly unknown.

Factor of the Tourist Trade.

One other important factor in the development of the West Indies is that of the tourist trade. The splendid climate the colonies enjoy, together with a scenery that far surpasses in grandeur anything the writer has ever seen, be it in the Middle or Far East, in the French or Italian Rivieras, or in California, bids fair to make them one of the greatest tourists rendezvous in the world, ever increasing numbers of people going to them from the United States from Europe, Canada, and all the Central and South American countries. This again means much to Canadian traders having entrè into their markets, and means much to them also indirectly, since remembrances of the goods they see in their sojourn, will be carried away by the visitors to their distant homes, creating a demand for Canadian goods in places where they have hitherto not been seen. Federation of the Colonies, either in groups or altogether, and some even possibly with Canada, is an event that pressure of modern conditions may lead one to expect within the next few years, with a consequent result to them of increased importance and development efficiency that has followed federation in every country in which it has been tried.

We have now seen the present importance of the British West Indian markets, and, what is more important still, we have also seen a few of the causes that will bring the West Indies into that great future that is in store for them. We can, therefore, realize the magnitude of the opportunities Canadian traders and manufacturers now have in their possession. Having ties of kinship on their side, a most favorable geographical position, and preferential entry into most of the markets, a full realization of these opportunities rests entirely with the manufacturing and mercantile circles of this country and the interest and enterprise they display.

TOBACCO GROWING IN CANADA

The season of 1912 from the tobacco-growing point of view was unfavorable. Long-continued rains, followed by cold, first hampered the work of planting and then considerably delayed growth. Up to the month of August, both in the Quebec and Ontario districts of cultivation, the position appeared to be critical. Fortunately an exceptionally mild autumn served to a certain extent to bring things back into condition.

The Quebec crop will be remarkable for tobaccos somewhat shorter than the average and for a less elastic tissue than usual; but the curing is proceeding without trouble, thanks to the late arrival of severe cold. No tobacco has been frozen in the field and probably none will get frozen in the barn. On the whole, therefore, in spite of the weak development of the product the crop of 1912 will be one of the soundest which has been produced during recent years.

The cold and rainy summer has especially prevented the success of the fairly numerous barley plantations which had been tried in the immediate neighborhood of Montreal. One would not wish to pronounce too positively against cultivation in the province of Quebec of a type so slow to ripen, but one might say that it presents no possibility of success in a season such as that which has just ended.

In Ontario, upon all soils sufficiently well drained, and wherever the planting was early, the crop has been normal.

The position is summed up as follows by Mr. F. Clarlan, chief of the government tobacco division. Tobacco on low-lying and ill-drained land has failed to ripen; it is average upon plots planted early and where the water has not lodged, and some plantations yield crops even over the average. Desiccation is proceeding normally. It will be possible to strip the early tobaccos before the end of the month. Color is fairly good. The average yield per acre is estimated at 1,150 pounds and the total production at 6,500,000 pounds; but these figures are necessarily only approximate.

An extension of the Grand Trunk line of 18½ miles in length from Cass City, Michigan, to Bad Axe, Michigan, is under construction. This extension is being made in order to connect with the industrial section of Huron County, Michigan, of which Bad Axe is a central point.

TRADE NEEDS OF NEWFOUNDLAND

Substantial Increase of Business Could be Obtained With Comparatively Little Effort

BY HON. P. T. McGRATH, M.L.C.

In these days when Imperialism in its various aspects,—defence, trade, intercourse, etc.,—is the topic of the hour, it may not be amiss for Canadians to give some study to the possibilities in all these respects which are represented by Newfoundland. In this article, while I naturally propose to devote most of the space allotted to me to a consideration of trade matters, I might briefly point out, to begin with, that in regard to the problem of Imperial defence, if Canada decides to create a navy of her own, she will probably find in Newfoundland the most available material for crewing the ships. The British Admiralty has a naval reserve established in this Colony, with a drill ship at St. John's for training the recruits, while it appears that Canada has had to send a recruiting officer to England recently to open offices to secure men to make up the complements of the Niobe and Rainbow, the nucleus ships of the Canadian Navy on the Atlantic and Pacific coasts. In like manner, the spread of the Imperialistic spirit has tended to break down many of the prejudices, misunderstandings and wrong ideas regarding Newfoundland, which prevail in Canada and vice versa, and within the past decade there has been a notable enlightening of the people of both countries in this respect.

HON. P. T. McGRATH, M.L.C.

Growth after Bank Collapse.

In regard to trade, it should be stated, in the first place, that the modern period in Newfoundland's trade begins with July 1st, 1895, when its affairs were reorganized after the disastrous collapse of the local banks in December 1894, which brought down many of the leading fish-trading establishments and almost jeopardized the solvent existence of the colony itself. At that time the population of Newfoundland was about 215,000; in 1901, it was 222,000; in 1911, 243,000. In the decade between 1890 and 1900 it increased 9.37 per cent. against 11.12 per cent. for Canada, though Newfoundland had no immigration whatever and Canada increased her population by many hundreds of thousands through the immigration movement that took on a modern phase within that period. In the past decade, there was, of course, no comparison with respect to Canada as a whole, because of the enormous influx to the Western provinces, but by comparison with the Maritime Provinces, Newfoundland, though with absolutely no immigration, increased her population 9.95 per cent., whereas the Maritime Provinces increased only 4.09 In the past forty years Newfoundland has increased her population 60 per cent., while the Maritime Provinces have increased less than 16 per cent.

Bearing these facts in mind when considering the sort of constituency which Newfoundland forms for the commerce of other countries, it will readily be seen that no very substantial improvement should accrue within the past fifteen years by reason of great increases in population, such as Western Canada shows, and that under normal conditions, an advance of 15 per cent. is all that might be expected, because that is all the population increased. A study of the figures of the colony's progress will, however, show that the augmentation in its trade has been more than 100 per cent.

Newfoundland is a country that imports most of all that her people eat, and wear, and use in their homes and in their various avocations. More than 90 per cent. of all the imports come from Britain, Canada and United States, while on the other hand over 60 per cent. of the exports go to the rest of the world, and not much more than 30 per cent. to the countries from which we import so much. The explanation is that the chief article of export—dry codfish,—is consumed mainly in the Catholic countries of Southern Europe, in the West Indies and in Brazil, while practically none of the products of these countries, except molasses from the West Indies, enters largely into consumption in the colony. At the opening of the period under review—that since 1895-6—the imports of Newfoundland from Britain, Canada and the United States were about equal in value, Britain supplying in the main wearables, and the other food-stuffs. Gradually, however, our neighbors on this side of the Atlantic increased their sales at the expense of the Mother Country, and only within the past three years has there been a very marked improvement in the total of imports from Britain, though Canada and the United States have been running neck and neck on their imports, we buying from each about five million dollars' worth annually of late. The largest item in these totals is represented by imports of flour, of which the colony consumes an enormous quantity, and as Newfoundland now levies no duty on flour imports, the Canadian and American millers are constantly competing for the trade.

Series of Surpluses.

Between the fiscal years 1895-96 and 1911-12, the colony's revenue has increased from $1,564,467 to $3,720,000; the expenditure from $1,360,455 to $3,530,000 and in fifteen of the seventeen years there have been surpluses realized aggregating altogether $1,912,000, this series of surpluses having been unbroken since 1898 with one exception. Out of this sum $500,000 has been deposited at interest in the Bank of Montreal as a reserve fund for use in any future emergencies, while the balance has been devoted to augmenting the regular appropriations for the various public services and in carrying our new undertakings of the same character. This splendid record has been achieved despite the fact that reductions of taxation aggregating in the whole an equivalent now of perhaps $500,000 annually have been effected, while on the other hand the regular appropriations for the public service have been subsantially increased every year. These conditions, of course, have only been made possible by an enormously improved commerce, and they prove conclusively how Newfoundland has prospered and how profitable a market she represents.

The trade statistics show that during the same period—from 1895-96 to 1911-12 the imports have increased from $5,986,861 to $14,733,490, and the exports from $6,638,187 to $13,874,809, the total trade having therefore increased from $12,625,048 to $28,608,299 or virtually a million dollars per year.

Subjecting these latter figures to further analysis, we find that the imports from Great Britain have increased from $1,875,754 to $4,024,474, there being an extraordinary increase the past year, totalling one million dollars above the previous year. The imports from Canada have grown from $2,231,641 to $4,819,058, the increase being gradual and only subject to such fluctuations as might naturally be expected. The same is true of those from the United States, the increase being from $1,473,721 to $5,074,371. The trifling character of the imports from other countries is shown by the fact that the amount was only $405,745, increasing to $815,567 within seventeen years.

Canada Had Biggest Share.

As the imports to Newfoundland from Canada are of more interest to Canadian readers of The Monetary Times, it ought to be noted that at the beginning of this period, Canada had probably the largest share in its trade, though the statistics of that time are by no means as reliable as those at present, and it is beyond question that great quantities of Canadian flour shipped across the border and coming into Newfoundland via New York were billed as American, but it is clear that American trade has held its own in spite of the kinship of the two Dominions and the close proximity of the Maritime Provinces. Steamer lines ply between New York and St. John's every week, and also between Montreal and St. John's, and between Halifax and St. John's, while from 1898 until the early part of this year, there was a tri-weekly service for pasengers, mails and freight, operated by the Reid Newfoundland Company, its steamer Bruce connecting with the Intercolonial Railway at North Sydney. Now the service is a daily one, and will be so in future, the Reids having on June 3rd, King's birthday, inaugurated a daily service, the result of which is expected to be a substantial increase in Canadian trade.

The Newfoundland tariff is the same in its application to all countries, there being no preference or discriminations and thus it depends on the traders themselves as to which secure he lion's share of the market. One of the chief causes of American success is the fact that, according to the merchants and others in St. John's, the British manufacturer sends very few agents to the colony and the Canadian manufacturer, until very recent years, not many more. The American manufacturer in this regard is much more progressive and enterprising that his neighbor, though latterly the Canadians are showing much more activity. Still the preponderance of Americans is noteworthy yet and there are great possibilities otherwise.

Can Compete on Equal Terms.

The principal articles in which the three countries can ompete on fairly equal terms are coal, leather and its wares; dry goods, cotton fabrics, hardwares, small wire, hemp yarn, eadymades, tweeds, women's dress goods, salt machinery nd locomotives; groceries, fruit and stationery. During the past seven years Britain's sales of coal to the colony have eached about $50,000; Canada's about $500,000 and America's about $80,000. In leather and its wares Britain has old us only about an average of $25,000 worth annually, Canada about $120,000, and America about about $200,000. Of Dry goods, Britain's proportion has been about $300,000, Canada's about $50,000, and America's about $80,000. Of otton fabrics, Britain has sent us annually about $220,000 worth, Canada about $12,000 worth and America about $75,00 worth. In hardwares we have obtained about $150,000 worth from Britain; about $60,000 worth from Canada and bout $100,000 worth from America. In small wares Britain's otal has exceeded $200,000, while Canada's has been only 0 per cent. of the total, and America's scarcely as much. Of emp yarn Britain in the first four years sent us about $160,00 worth, and latterly not much more than half that amount, Canada's proportion being about $20,000 worth, and America's about $70,000, while the local manufacturers has inreased very considerably.

Britain Supplies Readymades.

In the matter of readymades, Britain has contributed bout $170,000 worth, Canada about $15,000 worth, and America about twice that amount. Of tweeds we have had a imilar import from Britain, and infinitesimal amounts from he other countries. In women's dry goods Britain's quantity as been about $120,000 and little or nothing from the other ountries. Of salt, on the other hand, Britain has supplied us with next to none, Canada with about $20,000, and the United States with little or none. In machinery and locomotives we ave averaged about $100,000 from Britain, twice that amount rom Canada, and about twice the amount from the United tates. Britain's grocery bill against us has been about $70,000 year, Canada's about one-half that amount, and America's bout the same. Of fruit, fresh and dry, we have obtained bout $40,000 from Britain, about $20,000 from Canada, and bout $30,000 from the United States; of stationery, Britain's uantity has been about $40,000, Canada's about $60,000, and America's about $40,000.

For Canadian Manufacturers.

In other directions there are also large possibilities for Canadian trade to develop with this colony, and there seems o be no reason to fear that there will be any cessation in the nward march of the colony in the direction of material proress. Even if political union is out of the question—for there was never less prospect of federation with Canada than there s to-day, and it may be taken for granted that while Newoundland is prosperous she will not hearken to any proosals for such a union, woo Canada ever so warmly—there s no reason why great quantities of the commodities now obained from the United States should not be obtained from Canada and the Mother Country. Therefore, it would seem o be the part of wisdom for Canadian manufacturers and business people generally, to give closer attention than they o to the needs of Newfoundland where there is a possibility f doubling the trade at present done and where a very subtantial advance might be made with comparatively little ffort.

◆

Improvements effected by the Marine and Fisheries Deartment on the St. Lawrence during the past season include he erection of a steel and reinforced concrete lighthouse on St. Helen's Island at a cost of $23,000. Five new range ights are in course of erection in the St. Sulpice Channel. The piers at Citrouille and at Contrecoeur Traverse have een rebuilt. Double flashlight buoys have been placed on he starboard side of the ship channel coming up the river.

REVIEW OF MINING IN ONTARIO

Many Properties Were Reopened Last Year—Cobalt's Unique Dividend Record—Impetus Given to Gold Mining

BY H. E. T. HAULTAIN

There has been recently issued the twenty-first annual report of the bureau of mines covering the mining industry of Ontario for the year 1911. The statistical review by the Deputy Minister of Mines, Mr. Thomas W. Gibson, included in the first fifty pages of the blue book should be issued separately and should be in the hands of every business man taking an interest in the larger affairs of Ontario. This review shows that the mineral production of this province in 1911 had a value of forty-two million dollars. Directly engaged in this production were twenty thousand men drawing wages amounting to thirteen million dollars. As most of these men were living in new, outlying districts, in new towns forming the centres, in several instances, of new farming districts, the amount of money indirectly involved in transportation, housing and supplies represents an additional large sum.

In 1911 the gold output was insignificant, amounting to only $42,000, only one-tenth of one per cent. of the total mineral production. But the silver accounted for considerably more than one-third, having a value of $16,000,000. Of this gross value, one-half was paid out in dividends, a record unique in the mining world.

In 1912 the total mineral production will be considerably higher than in the previous year. The silver output will be approximately $17,000,000, of which more than one-half will be available for dividends. The gold output will have risen to nearly $2,000,000, a sum not far from the total output of gold in Ontario prior to this year.

Wealth of Cobalt.

More than 95% of the silver comes from the 10 square miles of the Cobalt camp and from an average depth of less than 250 feet; 95% of the gold comes from the Porcupine camp. As mentioned in my review, written for *The Monetary Times* twelve months ago, the output from Cobalt has reached its summit. On account of the high price of silver, this year's value amounts to a million dollars more than last year but the output in ounces is about 30,000,000 as against 31,500,000 last year and 30,600,000 the year before. A rapid decline is not to be expected but rather a gradual one, with final extinction many years away. Cobalt has had an uneventful year of steady operation.

Some of the milling plants have increased their capacity. The wet process of treating high grade ore introduced last year at the Nipissing has proved so successful that a similar plant has been erected at the Buffalo mine. This means that upwards of four million dollars worth of ore will be treated annually in the camp and the product shipped out as silver bars instead of the ore being shipped to smelters.

Several Mines Were Reopened.

Perhaps the most important feature of the year has been the reopening of six or seven mines which had been closed on account of financial or legal troubles and disappointments. Exploration at depth has shown that some silver will be produced from lower levels than those now being worked, but no evidence is as yet forthcoming to give promise of any such richness as existed near the surface.

South Lorraine, Elk Lake and Gowganda were all active and give promise of somewhat better things than in the past. Their combined output, however, is small as compared with Cobalt.

Recovering rapidly from the fire and aided by the railway which reached the camp at the end of 1911, Porcupine has shown wonderful results in quick time. Work on the Hollinger and on the Dome commenced in the first quarter of 1910 and in the second quarter of 1912, less than two years and a half, they were equipped with large and complete plants and stamp and cyanide mills, and have produced during the year nearly two million dollars in gold bullion. They have both had the advantage of excellent management. In the case of the Dome, the right hand knoweth not what the left hand doeth, so self-contained is the management, and no particulars whatever are given to the public. But the Hollinger has adopted the reverse method and issues to its shareholders very complete information in regard to work done, assay values, etc.

Hollinger is Leading the Way.

Nothing shows more clearly the change in mining affairs in Ontario than the history of this gold mine, owned and controlled in Ontario, barely three years old, with a

(Continued on Page 275).

WESTERN CROPS WILL LIKELY BRING TWO HUNDRED MILLION DOLLARS

Wheat should yield one hundred and ninety-six million bushels—Figures of last and previous year compared

Crop.	Bushels.	Price—cents.	Value.
Wheat	196,000,000	62	$121,520,000
Oats	224,500,000	25	56,125,000
Barley	49,600,000	33	16,533,000
Flax	12,900,000	1.10	14,190,000
Total			$208,368,000

The above estimate of the production and value of the Western crops for the season of 1912 has been taken by *The Monetary Times* as likely to be more nearly correct than others, when the final returns are made several months from now. In preparing the above estimates the Northwest Grain Dealers' Association figures of acreage have been accepted. These differ appreciably from the government figures, but are probably more nearly correct. The average yield has been calculated upon reports furnished by the bank managers and these reports covered every district in each of the three Western provinces.

Grain Dealers' Estimate.

The Northwest Grain Dealers' Association's figures of the crops of Manitoba, Saskatchewan and Alberta, as published early in November, were as follow:

Wheat—10,126,000 acres at 18.0, 188,333,000.
Oats—5,065,000 acres at 43.5, 220,327,500.
Barley—953,000 acres at 33, 31,449,000.
Flax—1,400,000 acres at 9.5, 13,300,000.
Wheat inspected to date, 34,433,670.
Wheat in store at country points, 19,132,000.
Wheat in transit not inspected, 4,300,000.
Wheat marketed at Winnipeg, 30,000.
Allow seed feed and country mills, 35,000,000.
Total—92,895,670.
Balance of the crop to be marketed, 95,437,880.
Oats—Inspected to date, 6,805,800.
Barley—Inspected to date, 2,756,400.
Flax—Inspected to date, 1,670,000.
Twenty per cent. of crop is No. 4 and under.

Some of the Estimates.

The following are some of the estimates which were made of the Western wheat crop:—

Authority.	Date of estimate.	Bushels.
The Winnipeg Commercial	August 3	202,995,000
The Northwestern Miller	August 13	200,000,000
The Monetary Times	August 24	185,000,000
Finley Barrell & Co., Winnipeg	August 29	200,000,000
Northwestern Grain Dealers' Association	September 5	179,828,000
Dominion Government	September 30	188,816,600
Bank of Montreal	December 2	188,000,000
Lake of the Woods Milling Co. (Mr. Hastings)	October 1	200,000,000
Canadian Bank of Commerce	October 12	196,000,000
Western Canada Flour Mills (Mr. McGaw)	October 15	180,000,000

While the prices of wheat were lower last year, the proportion of the higher, or contract grades in the prairie provinces is much larger. The better condition of the grain renders it easier to handle and to market, and the returns to the producer are quicker and safer.

The following figures were gathered from the reports of crop correspondents throughout Manitoba, and form a conservative estimate of the acreage under crop and yield for 1912.—

	Acres.	Estimated yield
Winter wheat	127,200	2,607,600
Spring wheat	855,000	18,040,500
Oats	1,196,000	35,880,000
Barley	262,200	6,958,060
Flax	96,050	576,300
Rye	17,725	354,500
Total	2,554,575	64,416,900
Timothy	51,435	
Alfalfa	10,370	
Total area under crop	2,616,380	

Crops in Alberta.

The provincial estimates are usually inclined to be a little higher than estimates made of the Western provinces generally. Seventy million bushels is the estimate of Alberta's total crop, as made by the experts of the largest grain elevator business operating in the Prairie Provinces. In detail, the estimate places the wheat crop at 20 million bushels, oats, 40 millions, barley, flax and rye 10 millions. This is about 10 millions in excess of the Provincial Government's estimate. The total acreage under cultivation is approximately 2,500,000.

Crops in Saskatchewan.

The total yield of wheat, oats, barley and flax in Saskatchewan in 1912 is estimated by the provincial department of agriculture as 228,466,154 bushels or an increase of 15,755,801 bushels over the crop of 1911. This was grown on an estimated acreage of 9,184,814 against 8,602,455 acres in 1911, showing an increase in acreage of 582,359 acres.

Wheat shows an increase both in acreage and in average yield. Oats show an increase in acreage but a slight decrease in the average yield, while barley and flax both show increases in acreage and in yields. The north-eastern had the smallest acreage under wheat, but had the largest yield, per acre.

The district with the largest acreage under barley is the south-eastern, possibly on account of the proximity to the United States markets.

The following are the summarized figures:—

	1912			1911		
Crop	Crop area acres	Total yield bushels	Yield per acre	Crop area acres	Total yield bushels	Yield per acre
Wheat	5,384,092	105,993,095	19.6	5,232,248	96,796,588	18.50
Oats...	2,421,932	101,476,079	41.8	2,192,806	98,676,270	45.0
Barley	267,139	7,870,123	29.4	244,993	6,859,804	28.0
Flax...	1,111,651	13,126,857	11.8	932,408	10,377,701	11.3

The Dominion Government's estimate of September 30th for spring wheat is 188,816,600 bushels, as compared

HOW CROP RECORDS ARE MADE.

This farmer has 13½ square miles of the rich soil of Western Canada. He ploughed 10 square miles in 90 days, giving acreage figures another impetus.

ith 189,904,500 bushels last year. For fall wheat the esti-
ate is 16,868,700 bushels compared with 26,014,000 bushels
st year, the total estimated wheat production being there-
re 205,685,300 bushels, as compared with 215,918,500 bush-
s in 1911, a decrease of about 5 per cent. The yield per
cre is 21.08 bushels for all wheat as against 20.77
ushels last year. Oats show a total production of
1,502,000 bushels, compared with 348,585,600 bush-
s last year, the yield per acre being 41.39 bushels, com-
ared with 37.75. Barley is estimated to yield a total of 43,-
5,100 bushels, compared with 40,631,000 bushels last year,
e yield per acre being 31.00 bushels against 28.94. The
tal production of rye is 3,086,000 bushels against 2,668,800
shels in 1911, the yields per acre being respectively 20.75
d 17.41 bushels. Of oats, barley and rye, the increases in
tal production as compared with last year represent per-
ntages of 9, 8 and 15. The estimated production of peas
4,202,400 bushels, of beans 1,106,800 bushels, of buck-
heat 10,924,100 bushels, of flaxseed 21,143,400 bushels, of mixed grains 17,941,700 bushels and of corn for husking 14,218,400 bushels.

The average quality of these crops at harvest time, measured upon a per cent. basis of 100 as representing grain well headed, well filled, well saved and unaffected to any appreciable extent by frost, rust, smut, etc., is as follows: Spring wheat 83.70, oats 86, barley 84.48, rye 80.82, peas 66.41, beans 68.81, buckwheat 80.87, mixed grains 90.59, flaxseed 83.86 and corn for husking 71.92 per cent. Of these crops wheat, oats, barley and flaxseed are above, while peas, beans and corn for husking are below the average quality for either of the two previous years. Rye is slightly below the average. Flax is well above the quality of both 1911 (75 per cent.) and 1910 (73 per cent.).

Comparison of Two Years.

The following is a provisional statement of the yield of cereal crops, September 30, 1912, compared with final estimate of 1911:—

Field crops.	Area.		Yield per acre.		Total yield.	
	1912. acres.	1911. acres.	1912. bush.	1911. bush.	1912. bush.	1911. bush.
Canada—						
Fall wheat	781,000	1,172,119	21.60	22.19	16,868,700	26,014,000

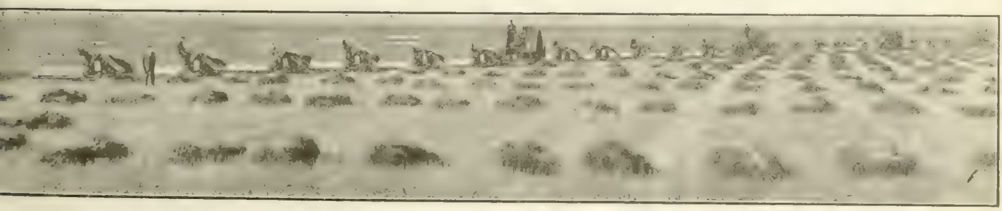
(Continued at foot of page 260)



FLAX AS FAR AS THE EYE CAN SEE.

These four gasoline tractors, in the Saskatoon district, are hauling six 8-feet binders, cutting in all a 192-ft. swath and tirelessly doing the work of 96 horses.

CANADA FIFTH AMONG WHEAT PRODUCERS

Russia Was First Last Year and the United States Second—Figures of Our Competitors

Canada is fifth and Russia leads the world in the production of wheat. The yield of the latter country is 749,941,000 bushels, according to the Department of Agriculture, Ottawa. United States comes second, with 720,000,000 bushels and Canada fifth with 205,000,000 bushels. India and France are in between with 366,930,000 bushels and 335,039,000 bushels, respectively. Russia, which had a relatively poor crop in 1911, showed an increase in 1912 of 141,000,000 bushels. The United States increased 99,000,000 bushels and Canada decreased 10,000,000 bushels.

PROBLEMS OF BOUNTIFUL CROPS.

Here is a farmer who complains that the implement companies do not sell binders specially constructed to handle the heavy crops of Central Alberta. "The machine is always getting clogged."

Nineteen-Twelve Wheat Production.

The following table gives the 1912 wheat production of all the countries which have made their official reports:—

Country.	1912. Bushels.	1911. Bushels.
Prussia	92,722,000	95,741,000
Belgium	15,278,000	14,617,000
Bulgaria	63,750,000	72,005,000
Denmark	3,915,000	4,469,000
Spain	112,416,000	148,497,000
France	335,039,000	322,652,000
England and Wales	55,341,000	59,956,000
Hungary	186,290,000	190,100,000
Italy	165,714,000	192,397,000
Luxemburg	654,000	641,000
Norway	291,000	270,000
Netherlands	4,608,000	5,566,000
Roumania	89,416,000	95,657,000
Russian Empire	749,941,000	509,503,000
Switzerland	3,112,000	3,524,000
Canada	205,685,000	215,851,000
United States	720,333,000	621,338,000
India	366,930,000	374,845,000
Japan	24,453,000	24,851,000
Egypt	28,048,000	38,046,000
Algeria	27,173,000	36,596,000
Tunis	4,226,000	8,635,000
Totals	3,256,235,000	3,035,757,000

Bigger Than Previous Year.

The total production of wheat in the countries reported is 220,000,000 bushels more than there was produced in the same countries in 1911.

◆

The plant of the Eastern Car Company will be in operation on July 1st, 1913.

CANADIAN AND UNITED STATES CROPS

Comparison of Wheat, Barley, Oats and Flax Production—Our Neighbors' Crop Figures

Canada.

Crop.	Bushels.	Value.
Wheat	196,000,000	$121,520,000
Oats	224,500,000	56,125,000
Barley	49,600,000	16,533,000
Flax	12,900,000	14,190,000
Total	483,000,000	$208,368,000

United States.

Crop.	Bushels.	Value.
Wheat	720,333,000	$ 596,000,000
Oats	1,417,172,000	478,000,000
Barley	224,619,000	125,000,000
Flax	29,755,000	39,000,000
Total	2,391,879,000	$1,238,000,000

The above tables show the comparative size and value of the wheat, oats, barley and flax crops in Canada and the United States. These 4 crops in the Dominion last year were estimated at 483,000,000 bushels with a value of $208,368,000. In the United States, similar crops totalled 2,391,879,000 bushels, valued at $1,238,000,000. Just as Canada recorded last year one of its greatest general crops, so the United States estimates that 1912 was the most productive of all agricultural years in that country. As the data for comparisons of crops in the two countries of North America are frequently needed, *The Monetary Times* gives below the more important figures dealing with the crops of the Republic last year.

Size and Worth of Leading Crops.

Last year's corn crop of the United States is the largest ever produced in that country, and reaches 3,169,000,000 bushels. In value, too, the corn crop of last year is the highest on record, and reaches $1,759,000,000. This crop is worth to the farmer 20% more than the average corn crop of the previous five years.

Hay has returned to its old place and is the crop that is second in value. The year was most productive for grass and hay, and the harvest of hay is measured by 72,425,000 tons. This is 16% above the average crop of the previous five years. The value of last year's hay crop is $861,000,000, and has never been equalled.

The cotton crop will be next to the largest one in production and is likely to exceed the average crop of the five preceding years. It is estimated that the lint cotton of 1912 may be worth $735,000,000, an amount that exceeds that of 1911, although the crop of that year was much greater than this year's crop. The seed out of the cotton crop of last year is estimated to be worth about $117,000,000, or over 6% more than the five-year average, but its value has been exceeded by the crops of three preceding years. The combined value of the cotton lint and seed is estimated to be $860,000,000.

Big Wheat Crop.

The United States wheat crop is estimated to be worth $506,000,000. The quantity of the crop, 720,333,000 bushels, is 11.2 % greater than the average production of the previous five years and has been exceeded by the crops of only two years.

The oats crop is fifth in order of value. Although the price has declined, the production is so large that the value of the crop is estimated to be $478,000,000, or a little more than one-half the value of the entire cotton crop. The remarkable production of 1,417,172,000 bushels was 51.5% greater than the average of the preceding five years.

The potato crop of 414,280,000 bushels is above the five-year average by 29%, but the crop is worth only $190,000,000 on account of low prices.

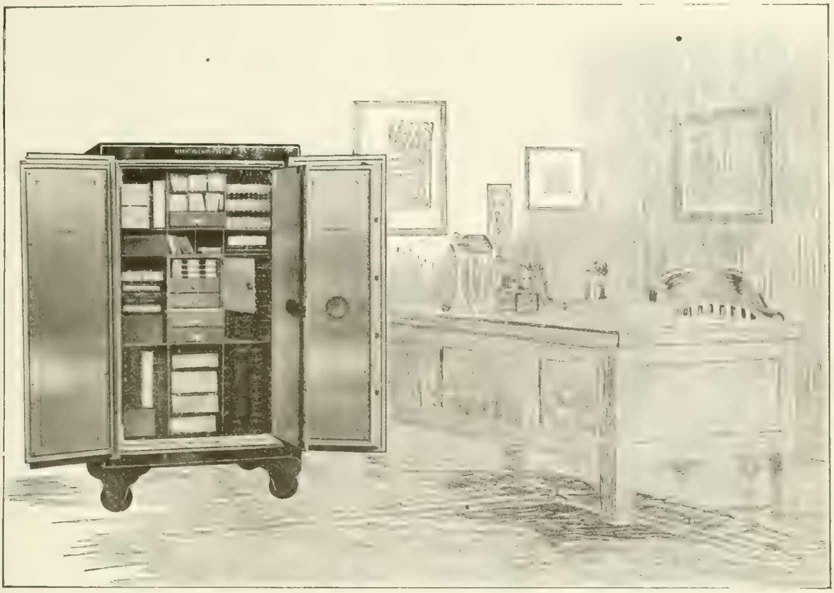
Barley and Flax.

With a production of 224,619,000 bushels, the barley crop far exceeds the largest one heretofore produced. It is 35.7% above the average production of the five preceding years. The value of last year's crop, $125,000,000, is below the value of the crop of 1911, although the production of that year was 64,000,000 bushels less.

The tobacco crop amounts to 950,437,000 pounds and is 7.1% above the average of the preceding five years. The total value of $97,000,000 is about 11% above the five-year average.

Flaxseed is the most valuable of the smaller crops, about $39,000,000, or 32.4% above the average value of the five preceding crops. The production is 29,755,000 bushels.

(Continued on page 274, second column).



The Kind of Safe YOU Should Have in Your Office

THE excellent design and appearance of a Dominion Safe in your office is clearly shown in the above illustration, which is taken from a prominent installation in Montreal. These safes are as high grade as it is possible to produce.

Our safes have always preserved their contents absolutely, even under the severest tests, while many safes of cheaper construction have failed.

The inner and outer steel walls of these fire-proof safes are made of best re-rolled steel. The latest improved interlocking jambs insure a perfect fitting door through which heat cannot pass. The fire-proof composition filling is the splendid result of years of constant study and tests. Plates of drill-proof steel protect the fine combination locks.

In buying a safe it will pay you to look for the best rather than shop for the cheapest.

Let us know what your requirements are in this line. A request for a catalog or for a salesman to call will be instantly complied with.

WORLD'S CROPS LAST YEAR

International Statistics Show Increase in Wheat of Over Six Per Cent.—Corn Made a Large Gain

The preliminary estimates of the International Institute of Agriculture of Rome, Italy, show that the past year was generally a good one for crops throughout the world. The production of crops other than wheat is estimated as follows:—

Rye.

Country.	1912. Bushels.	1911. Bushels.
Prussia	348,335,000	331,765,000
Belgium	22,519,000	23,089,000
Bulgaria	12,401,000	14,768,000
Denmark	18,007,000	19,713,000
Spain	25,755,000	28,897,000
France	51,332,000	47,503,000
Hungary	57,579,000	54,146,000
Italy	5,291,000	5,297,000
Luxemburg	680,000	660,000
Norway	883,000	947,000
Netherlands	16,323,000	16,539,000
Roumânia	3,710,000	5,018,000
Russian Empire	984,716,000	762,047,000
Switzerland	1,685,000	1,829,000
Canada	3,086,000	2,669,000
United States	35,422,000	33,119,000
Algeria	1,000	3,000
Totals	1,587,525,000	1,348,009,000

Barley.

Country.	1912. Bushels.	1911. Bushels.
Prussia	82,384,000	78,836,000
Belgium	4,216,000	4,595,000
Bulgaria	18,372,000	20,327,000
Denmark	26,419,000	23,025,000
Spain	58,606,000	86,793,000
France	52,274,000	50,956,000
England and Wales	48,733,000	46,560,000
Hungary	72,608,000	76,236,000

It does not matter whether Winnipeg happens to be peculiarly well situated for a manufacturing centre or not, it will become a great manufacturing centre, as much as it is a great produce market.—Sir Edmund Walker.

During 1912, 178 miles of Grand Trunk track were relaid with new steel rails weighing 80 pounds to the yard of rail, and 175 miles were relaid with steel of 100 pounds to the yard.

FORT WILLIAM, ONT.

THE POWER CITY = MIDWAY BETWEEN
THE ATLANTIC AND THE PACIFIC

Possesses many advantages for Manufacturers, Wholesalers, Investors, Agriculturalists, in fact for all classes.

HYDRO-ELECTRIC POWER IN UNLIMITED QUANTITIES
PURE WATER IN ABUNDANCE
EXCELLENT RAIL FACILITIES
THE GREATEST HARBOR IN CANADA
EXCELLENT LABOR CONDITIONS CHEAP SITES FOR FACTORIES

The industrial development of Fort William during 1912 has been phenomenal. The firms locating at Fort William during 1912 have now under construction plants costing nearly four million dollars, employing nearly 2,000 men, which means an increase of 10,000 to the population. Enormous development is taking place in all lines.

Leaders of America's manufacturers refer to Fort William as the coming "CHICAGO" of Canada.

The Industrial Bureau will prepare special reports on any particular line of industry, together with Maps, Guides, Pamphlets and Literature of all kinds, free of charge.

WRITE **R. J. BURDETT**

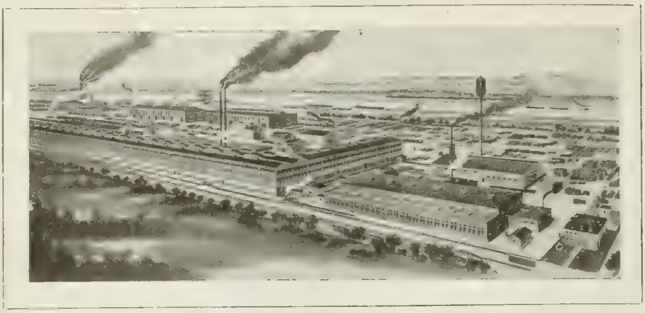
Industrial Commissioner

CITY HALL, FORT WILLIAM, ONT.

CANADIAN FOUNDRY

LIMI

MONTREAL -



DOMINION CAR WORKS, MONTREAL

THE Canadian Car and Foundry Company, Limited, although only three years old, has grown to be one of the largest and most important industries in Canada. It was organized in December, 1909, by a merger of the Rhodes Curry Company, Amherst, N.S., the Canada Car Company and the Dominion Car & Foundry Company, Montreal.

The oldest of these companies was the Rhodes Curry Company, which began business in 1877. In 1893 this Company purchased the J. Harris Company of St. John, N.B., established in 1828, and one of the first companies in Canada to build railway cars. Their plant was moved to Amherst, where car building has been carried on since 1893. Operated in connection with this plant are rolling mills, a malleable iron foundry, axle shop, wheel and grey iron foundries. All these departments have been repeatedly added to, and at the present time a bolster and steel car shop is being built.

The Canada Car Company was organized in 1904, for the manufacture of wood freight and passenger cars. Since amalgamation a steel car plant has been added, and both passenger and freight car shops have been doubled in capacity. Springs, wheels and grey iron castings are also manufactured at this plant.

The Dominion Car & Foundry Company was organized in 1906. At this plant steel cars, bolsters, brake beams and other specialties are manufactured. This plant has also been more than doubled in capacity.

A new plant is under construction at Fort William, Ont., where both steel and wood cars will be manufactured; also wheels, axles and grey iron castings. This plant will be in operation in August, 1913.

The Canadian Steel Foundries, Limited, owned and controlled by Canadian Car and Foundry Co., Limited, operate three plants. The original plant at Point St. Charles manufactures steel castings, car and locomotive springs, frogs, switches, crossings, etc., for electric and steam railways. The second plant is at Longue Pointe, Montreal, and is one of the largest and most up-to-date on the continent. At this plant steel castings and track work for street railways are manufactured. The third plant is situated at Welland, Ont., and consists of steel foundry and rolling mills. This foundry is run very largely on

give an idea of the magnitude of the operations of this
ny, it is only necessary to state that the different works
capacity to turn out annually :—

,000 Freight Cars
250 Passenger Cars
,000 Car Wheels
,000 Car Axles

200,000 Steel Bolsters
200,000 Steel Brake Beams
100,000 Steel Couplers

60,000 tons Steel Castings
30,000 " Malleable Iron Castings
18,000 " Grey Iron Castings
18,000 " Car and Locomotive Springs
10,000 " Frogs, Switches, Crossings, etc.
75,000 " Rolled Steel Bars, Angles, etc.

The fiscal year of the above companies begins on October 1st, and it is estimated that during the current year, the value of he different products sold from all the plants will exceed $23,000,000.

Photographs of six of the eight plants are shown herewith. The different works of this Company extend from Sydney, Cape Breton, to Fort William, Ontario, a distance of nearly two thousand miles, and this company, manufacturing as it does nearly everything that enters into the construction of railway cars, is probably the most self-contained car building plant in the world.

The employees at present number about 7,500 and the pay-roll aggregates about $500,000 each month.

ROOT AND FODDER CROPS

Hay and Clover Were Less in Area and Yield and Reduced the Past Year's Total Value

Upon total areas for potatoes, turnips, mangolds, etc., hay and clover, alfalfa, fodder corn and sugar beets, amounting to 8,732,000 acres last year, as compared with 9,160,000 in 1911, the total value of the products is estimated by the Dominion Government at $192,568,500, compared with $223,790,000, a decrease in value of $31,221,500. This decrease is caused by the diminution, both in area and yield, of the hay and clover crop, which is less than in 1911 in area by 426,000 acres, in yield by 2,000,000 tons, and in value by $28,380,000. All the other crops show increases, except alfalfa, the area of which in Canada is relatively small. The yield of potatoes is 81,343,000 bushels of the value of $32,173,000, of turnips and other roots 87,505,000 bushels, value $20,713,000, of fodder corn, 2,858,900 tons, value $13,557,500, of sugar beets 204,000 tons, value $1,020,000, and of alfalfa 310,100 tons, value $3,610,000.

In quality all these crops are marked high, the standard percentage being about 87, excepting for turnips, etc., which are 93, and for fodder corn, which is 82. A word of caution is necessary with regard to potatoes, for whilst yield and quality are generally good at harvesting, there are numerous reports of rotting in the cellars, the produce of the heavier soils having been considerably affected by the constant rains.

The following are estimates of area, yield, quality and value of potatoes, root and fodder crops in 1912:—

Field crops	Areas	Yield per acre	Total yield	Quality	Average price	Total value
Canada—	acres	bush.	bush.	p.c.	$ per bush.	$

The area estimated to be sown to fall wheat in five provinces of Canada last season aggregates 1,086,800 acres, as compared with 1,156,900 acres, the area sown in 1911. This represents a net decrease of 70,100 acres, or 6 per cent. In Ontario the acreage sown is 696,000 acres, compared with 797,200 acres, a decrease of 101,200 acres, or 12.6 per cent.; in Alberta the figures are 312,000 acres as against 300,700, an increase of 11,300 acres, or 3¾ per cent.; and in Saskatchewan the area sown is 72,000 acres against 53,000, an increase of 19,000 acres, or 36 per cent. Small areas in Manitoba and British Columbia complete the totals. The decrease in area is due to the persistent rains which hindered ploughing and sowing operations. The condition of this crop on October 31, 1912, was 92.67 per cent. of the standard for the five provinces. It was above 90 in each province, except Manitoba, where the small area of about 4,000 acres had a per cent. condition of 88½.

The percentage of fall ploughing completed upon land intended for this year's crops ranges from 45 in Ontario to 77 in Prince Edward Island for the East and from 24 in Alberta to 38 in British Columbia for the West. It is remarkable that both last year and in 1911 the seasons in the three Northwest provinces have been adverse to fall ploughing, and less than about 25 per cent. of such ploughing has been possible in both years, as compared with a more normal percentage at the same date of from 50 to 75. In the three Northwest provinces the area summer fallowed last year is estimated as being from 2 to 5 per cent. more than last year.

◆

FINAL CROP RETURNS OF 1911.

The following are the final figures of the wheat crop of the West for 1911:—

	Bushels.
Grain inspected	145,937,700
Milled, uninspected in the three provinces (official)	5,888,461
Estimate for mills (not reporting, but known to have been in operation)	1,500,000
Amount in store in interior elevators, October 31	2,324,856
In transit, uninspected, August 31	350,000
Reserve for feeding and seed	25,000,000
In farmers' hands for sale	750,000
Making a grand total of	181,751,017

◆

YIELD OF CROPS IN ENGLAND AND WALES LAST YEAR

The Board of Agriculture reports that the acreages and preliminary estimates of yield of the principal crops in England and Wales for 1912 ,compared with 1911 are as follows:

Crops	1912	1911	1912	1911	1912	1911	Average 10 years 1902-11
	acres	acres	bush.	bush.	bush. per acre	bush. per acre	bush. per acre

LACHINE CANAL WAS BUSY

The past season was a busy one for the Lachine Canal, which opened on April 29th and closed on December 5th. The following are the official statistics of the canal for imports passing through to Montreal compared with those of the preceding year:

	1912.	1911.
Wheat (bush.)	24,345,435	18,220,411
Indian corn (bush.)	289,914	4,600,682
Oats (bush.)	9,671,815	8,163,371
Barley (bush.)	881,399	622,040
Rye (bush.)	25,500	....
Flaxseed (bush.)	758,963	207,699
Flour (tons)	456,059	*1,003,039
Eggs (cases)	17,774	14,032
Butter (pkgs.)	5,466	6,712
Cheese (boxes)	250,340	242,859
Apples (brls.)	55,169	41,293

*Sacks.

The number of Canadian steamers passing through the canal was 172; American, 44; total, 216; tonnage, 148,301 tons. Sailing craft, barges, scows, etc., Canadian, 308; American, 10; American canal boats, 237; total 771; tonnage, 251,519 tons. Counting the number of trips made by each of the above vessels, a total was reached of 9,560 separate trips, and a combined tonnage of 4,110,364 tons.

Calgary Offers Power Cheaper than Niagara

The piping of natural gas into Calgary has brought that city into prominence as one of the cheapest power centres of the American Continent. Forty million cubic feet of natural gas per day are already available for the use of manufacturers, while at the wells is a daily reserve supply of one hundred million cubic feet, sufficient to meet the requirements of a manufacturing city of 250,000 population, which promises to be Calgary's destiny.

This fuel is sold to manufacturers at a price which permits of the development of power at a lower figure than hydro-electric power produced at the world's great cataract. Wide-awake manufacturers appreciative of the importance of cheap power, are therefore giving earnest consideration to Calgary's advantages before deciding upon the point of location of plants in Western Canada.

Yet cheap power is not all that Calgary can offer the manufacturer. Ready-made sites having complete trackage facilities and served by street railway, water and sewer these the city owns and holds in reserve for incoming manufacturers.

As a distributing centre, Calgary with all three transcontinental railway systems built into the city occupies a position second to none in the Middle West. Besides, it is the market capital of half a million prosperous people who draw upon Calgary for their every day requirements. Altogether there is no point in the Middle Canadian West where the problems of production and distribution are easier of solution.

If you are contemplating establishing an industry in Western Canada you cannot afford to overlook Calgary's combination of advantages. Write me for any other information you need.

REVIEW OF BRITISH COLUMBIA'S MINING INDUSTRY

Last Year's Production Was Large — Outlook is Excellent—Notes of Individual Results

BY R. R. HEDLEY.

Looking back upon the progress made in mining in British Columbia in 1912, one feels a little disappointed that more has not been accomplished in the way of developing new mines. Nevertheless, the year will make a creditable record and the promise is excellent. The total annual production, usually classed as mineral, will probably exceed thirty-one and a half-million dollars for 1912 against twenty-three and a half millions for 1911 and twenty-six and a half millions for 1910.

In metal mining the chief contributors to this have been the Consolidated Mining and Smelting Company of Canada, the Granby Consolidated Mining, Smelting and Power Company and the British Columbia Copper Company. These properties have handled a very large tonnage indeed and have established a good record with more than usually good prices for copper and silver. The Consolidated has this year distributed a dividend to its shareholders, as has the British Columbia Copper Company. The Granby, on the other hand, though carrying a credit balance of over a million dollars, is developing and equipping their new property at Granby Bay, Observatory Inlet, in preference to distributing a dividend.

Some Big Operations.

Preparatory to mentioning this latter enterprise it is interesting to review the accomplishment of this company since their establishment in 1901. During these twelve years they have mined and smelted eight million tons from their own property and smelted an additional five hundred thousand tons of custom ores, with a production of practically 100,000 tons copper, 3,200,000 ounces silver, and 500,000 ounces gold. The gross receipts have approximated $33,000,000; $25,500,000 of which has been devoted to cost of operation and $7,500,000 appears as net earnings.

Again, it is interesting to note that while the ore smelted in 1901 carried 31½ pounds copper, 0.44 ounces silver, and $2 in gold per ton and cost $4.77 for mining and smelting, in 1912 the production was 18.4 pounds copper, 0.29 ounces silver and 86c. in gold at a cost of about $2.90 per ton. The lowest figures in these twelve years for cost was $2.50.

It is gratifying indeed to those who are interested in mining at the coast to see this capable organization developing and equipping for large operations at Observatory Inlet. A very great deal of development work has been done on this property and the company's officers state that they have approximately six million tons of positive ore that will carry 40 pounds in copper, and approximately a dollar in gold and silver per ton. That in addition to this they are able to figure probable ore of a similar tonnage that will approximate the same values.

They have also acquired a property recently in the neighborhood that is developing well, and though as yet not prepared to speak of tonnage available, I am reliably informed that they have a large block that will carry 7% or 8% copper. Mr. O. B. Smith is the mining manager for this company and Mr. W. A. Williams in full charge of all smelting operations. The plant that they propose to erect will occupy an ideal site, and with such resources to draw on, both as to quantity, and variety, and character they should reduce their already low record of costs. This I consider will be accomplished in the saving of coke by utilizing to a great extent the sulphur contents of the ore; in other words semi-pyritic smelting.

Copper Mining and Smelting.

The British Columbia Copper Company, as usual, has done some extremely creditable mining and smelting work and will show low costs. They suffered a great loss this year in the death, through motor accident, of their manager, Mr. E. G. Warren, but fortunately Mr. Keefer was familiar with all details of mining and smelting from its inception, and has been able to keep up the standard for efficiency so long established at this plant.

This company has been doing some very extensive exploitation work in the copper camp near Princeton on the Similkameen River, and at last accounts was emphatically encouraged with the development, which showed large bodies of ore carrying good values in gold as well as copper. It is also gratifying to the engineer to find that the ores will not be lacking in basic ingredients, principally iron, and the establishment of a smelter for this camp is to be looked for in the near future.

The British Columbia Copper Company has also been developing a low grade gold mine on the mountains overlooking Slocan Lake, near Silverton, known as the "L.H." group, and it is not improbable that further development will prove a sufficient body of ore to warrant a large cyanide plant. During the summer they took an option of purchase on the Eureka mine near Nelson, B.C., and have had a force of men prospecting and developing. Their latest acquisition is the old Queen Victoria mine, across the Kootenay River from Kootenay and eight miles from Nelson on the Canadian Pacific Railway. This mine has been extensively exploited by several parties, the most recent being the Consolidated Company of Trail. It is to be hoped that the British Columbia Copper Company will be more successful in finding commercial ore in quantity.

A few statistics of production in the interior indicate an increase over former years and good promise for the future. Thus, Granby will have to its credit at the end of the year, 1,200,000 tons mined and smelted; the British Columbia Copper Company will approximate 660,000 tons; at Rossland the total will be about 240,000 tons, two-thirds of which, or 160,000 tons, is to the credit of the Centre Star.

Nelson and East Kootenay.

The gold mines of the Nelson district will probably total 40,000 tons milled, with the Motherlode, Sheep Creek, producing only in the later months. This property is milling at the rate of 2,000 tons per month and making an extraction of about $17 per ton, two-thirds of which is probably profit.

In East Kootenay the chief producer has been the Sullivan, with 30,000 tons shipped to Trail. The Slocan has but 27,000 tons to its credit but it must be remembered, first, that this is all high grade, hand-picked ore or concentrate, and second, that the old Slocan has been greatly handicapped for want of transportation as the result of last year's serious fires, but will in the future be well served by the Canadian Pacific Railway.

In the Slocan.

The chief producer in the Slocan has this year been the Standard, near Silverton, B.C., which is very profitably operating its mine, as is evidenced by the fact that in the late months of the year they have been distributing $50,000 in dividends.

The Van Roi (old Vancouver) comes second with a good record. The Hewitt, since the loss of the mill by fire, has confined its operations to development work and has shipped no ore. The Slocan Star Consolidation has completed a long tunnel and are drifting for the ore body with some very promising ore beginning to show in the face.

Rambler Cariboo, White Water, Utica and others will make a better showing next year. In the old Ainsworth camp several properties are being operated with considerable encouragement. Once more there is activity in the old Blue Bell camp across the lake, where Mr. Fowler has equipped the lower levels and is mining and milling at practically full capacity.

New Producers Last Year.

Among the new producers last year is the old Monarch at Field, which has been equipped with a concentrator and is credited with 12,000 tons of ore, yielding 1,500 tons of concentrate.

The Hedley Gold Mines made a record in 1911 and it is not improbable will do better this year with a total of 75,000 tons mined and milled. Little has been done in this camp on other properties, but the above company has acquired one group known as the Windfall, and there are indications that other properties will be re-opened and operated during the coming year.

At the Coast, besides the Granby Consolidated the chief mine is the Britannia on Howe Sound, which continues to ship a high grade product, as the result of hand-picking and concentrating. I regret that I am unable to give total of this but that they are satisfied with the result is evidenced by the fact that they have purchased for cash, at a large figure, an adjoining group of claims, and plan the erection of a new and more efficient milling plant.

Examination of Properties.

For some time engineers of the Consolidated Mining and Smelting Company of Trail have been visiting the coast, examining properties, and have this year taken an option of purchase on a group known as the Red Mountain group, not very far from the Britannia and having ore in a large quantity of a similar character. They will spend the winter in development and if satisfied therewith will exercise the option and establish a permanent plant.

There are other properties on this range that doubtless have equal merit, and it would be easier to induce capital to exploit them if the owners were more reasonable in their terms, especially as regards cash.

We hear little of the Marble Bay mine on Texada Island, but it continues to produce very profitable ore for its own-

CANADA, THE PANAMA CANAL AND PAN-AMERICA

mmense Trade Possibilities—Canada Should Get Ready for the Canal and Go After Pan-American Commerce

By HON. JOHN BARRETT

The concern of Canada in the completion of the Panama Canal should be great. Its interest in Pan-American commerce should be even greater. Canada has opportunities for the development of both export and import trade with the twenty countries from Mexico and Cuba south to Argentina and Chile. The advantages for her may not be as apparent as they are for the United States; they may not be so large, but, in comparison to Canada's population and in consideration of her location, they are such as to be worthy of her careful study and exploitation.

The Panama Canal cannot fail to bring a quickening influence to not only the whole western hemisphere, but to the whole world which will be felt on both the Atlantic and Pacific seaboards of the Dominion. All Latin America is going to experience a new progres and prosperity which will cause it to make increasing demands upon the output of not only the United States but of Canada, and, in turn, to be able to sell more to them of their own raw products. As Canada becomes more and more a manufacturing country it can not only supply articles that Latin America will want, but it can import the raw products of the southern republics and employ its capital and labor in manufacturing them into those articles which are not so much in demand in the commercial world.

Hon. John Barrett.

As it is not, however, so much the purpose of this discussion to point out the specific opportunities for Canada in the countries reached through the Canal as it is to emphasize the characteristics and possibilities of Latin America, I will endeavor to epitomize a few facts which should impress everybody who reads them with the importance of the Canal and of the countries lying south of the United States on the western hemisphere.

Twenty Nations of Latin America.

The twenty nations of Latin America, reaching from Cuba to Chile, cover an area of 9,000,000 square miles, or two and one half times that of Canada. They maintain a population of 75,000,000 which is increasing more rapidly by reproduction than is the population of either the United States or Canada. They conduct a foreign trade which reaches the vast annual total of $2,400,000,000. This total, in turn, represents an increase of $1,000,000,000 during the last ten years. If these twenty countries can conduct a foreign commerce of this volume without the Panama Canal and before they are generally appreciated by the world, it is difficult to foretell the size and value of their trade in ten years after the Canal has been completed and all the world has awakened to the wealth and resources of the southern republics.

The portion of Latin America which to-day is attracting particular attention on account of the Panama Canal is that remarkable coast line which reaches for 8,000 miles from the California-Mexico line southwest to Cape Horn, or where Chile and Argentina meet at the southern tip of Latin America. The Panama Canal will cut this coast line at a strategic point for the commerce of the world. From Panama northwest to San Diego, California, are 3,000 miles upon which debouch the western shore of Mexico, Guatemala, Salvador, Honduras, Nicaragua, Costa Rica and Panama. From Panama south to the Straits of Magellan there is a reach of 5,000 miles, upon which debouch Colombia, Ecuador, Peru, Bolivia and Chile. Twelve Latin American countries, therefore, are tributaries to the Pacific Ocean commerce that will be reached by the Panama Canal.

Worthy of Canada's Attention.

That this trade is worthy of the close attention of Canada and the United States is proved by the fact that last year the Pacific Coast of Latin America, without the Canal and practically isolated from the eastern section of the United States and Canada and the western coast of Europe by the long detour around South America, conducted a foreign trade valued at $400,000,000. This, moreover, represents an increase of $200,000,000 during the last ten years. It is logical, therefore, to contend that, if these countries without the Canal and isolated, can now do a trade of that size, they will conduct a foreign commerce in another ten years, after the Canal is completed, valued at $1,000,000,000 or more. Of this vast volume and value the Pacific and eastern coasts of Canada should get their share. It is not for me to discuss the trade of the Pacific Ocean reached through the Panama Canal which has directly to do with Japan, China, the Philippines, India and Australia. That does not come under the scope of the Pan-American Union, but the commerce of these countries with the United States and Canada is sure to grow rapidly through the influence and the opportunity of the Canal.

Revolution is Not a Factor.

That the readers of The Monetary Times may have some interest in all Latin America, I desire to name a few interesting facts which are not often appreciated when Latin America is being discussed. The trouble is that the great majority of business men of Canada and the United States do not realize what a wonderland of opportunity Latin America is. They are misled by exaggerated stories of revolutions and unstable governments. The truth is that two-thirds of all Latin America's area and population have known no revolution for several decades, while great portions of it are making wonderful material, economic, educational and social progress.

Few people stop to think that inside of Brazil could be placed the entire connected area of the United States and still have room left over for twice the area of New York State. They forget that out of the Amazon every morning flows seven or eight times the volume of water which the St. Lawrence empties into the Atlantic; that this mighty river of South America is navigable for two thousand miles for vessels drawing twenty-five feet of water, and that one thousand miles from its mouth is the city of Manaos, with a population of sixty thousand, with all the up-to-date characteristics of a new city of Canada, or of the western portion of the United States.

"Go After the Pan-American Trade."

Let us, in discussing Latin America, not overlook the fact that Rio Janeiro, the capital of Brazil, has a population of one million and is spending $40,000,000 in making its beautiful harbor also the most practical; that great railroad systems are being built into the interior of Brazil; that she is spending more money on the improvement of her harbors than is the United States; that Uruguay, south of Bolivia, is one of the most interesting and progressive countries of the southern hemisphere, that though it is small in area it makes up for it in intelligence and wealth; that its capital city, Montevideo, has a population of 400,000, and that it is improving its harbor at an expense of $10,000,000.

Looking across the River Plate we see great Argentina, located entirely in the south temperate zone, covering an area equal to all that section of the United States east of the Mississippi River. It is gridironed with railroads; it exports as much wheat as the United States, and it raises more sheep than the United States and Canada put together; its capital city, Buenos Aires, with a population of 1,500,000 is growing more rapidly than any city of North America with the exception of New York and Chicago. Correspondingly

WORK OF THE COMMISSION OF CONSERVATION

Suppressing Forest Fire Waste — Western Water Powers—Report on Coal Resources Will be Published This Year

BY M. J. PATTON.

The work done by the Commission of Conservation during the past year was on a larger scale than that of any other year. This is true regarding the investigations and inventories it is making in connection with all the various natural resources of the country, but in no single sphere of activity has more satisfactory progress been made than in forest conservation. Ever since it came into existence, the Commission has spread abroad its propaganda for the suppression of the forest fire waste as the sine qua non of forest conservation, and during the past year it has seen its recommendations adopted and an adequate organization formed to cope with this destructive agency.

Few people who have not actually seen fire devasted forest areas can realize the appalling loss Canada suffers annually from this cause. Suffice it to say that the forestry branch of the Interior Department has estimated that for every foot of timber that has been cut in Canada by lumbermen, seven feet have been destroyed by fire. In 1910, the Commission sent out skilled woodsmen to investigate the causes of forest fires throughout the whole of Canada. Their investigation showed that approximately 34 per cent. of the forest fires of that year were caused by railways. The Commission thereupon made representations to the Government asking for legislation to penalize railways for fires set by them. In 1911 this legislation was passed.

Watching Forest Fires.

It empowers the Board of Railway Commissioners to require railways to patrol with properly equipped rangers, any portions of their lines which it considers should be guarded. In addition, railways, whether guilty of negligence or not, are liable to damage not exceeding $5,000 for each fire they start, if they have not used the latest and most approved fire prevention appliances.

By arrangement with the late Chairman Mabee, of the Railway Commission, the forester of the Commission of Conservation is also chief fire inspector of the Railway Commission. During the past season this official has organized the protective system referred to and designated the lines to be patrolled in the Western Provinces and in Ontario, and he is now engaged in completing the organization for Quebec and the Maritime Provinces. The Provincial Governments have co-operated by providing for inspection of the fire patrols employed by the railways.

In the United States, when the national forests were under the control of the Land Office, three per cent. of them was destroyed by fire annually. Four years after they were taken over by the forest service this loss had been reduced to one-tenth of one per cent. It is hoped that correspondingly effective results will be obtained in Canada from the protective service on railway lines organized under the supervision of the Railway Commission and the Commission of Conservation.

Western Water Powers.

In connection with water powers, the Commission during 1912, has conducted a survey in Northern Alberta, the Northwest Territories, and in British Columbia as far north as the Grand Trunk Pacific. The Government of British Columbia evinced its interest in this work by making a substantial cash contribution towards defraying the expenses of the survey.

With respect to minerals, the Commission's mining engineer has, for the past two years, been visiting all the important coal mines in Canada and in 1913 his report on the coal resources and coal-mining methods in Canada will be published.

The Lands Committee of the Commission has established illustration farms in every province, where the surrounding farmers can see the most advanced agricultural methods put into practice on an average farm, with the means actually available to the average farmer. It should be understood that these illustration farms are not purchased or leased by the Commission. They are ordinary farms whose owners agree to follow the advice of the agricultural experts that are supplied free by the Commission.

Leases to Oyster Producing Areas.

The dispute respecting jurisdiction over oyster areas, which the Commission has for some time been endeavoring to have settled, was definitely decided during the past year. The Dominion Government waived its claim in favor of the provinces and now the latter are in a position to issue unassailable leases to oyster-producing areas, something that has not before been possible since Confederation. Prince Edward Island is now surveying her large oyster areas for leasing purposes and applications for leaseholds have been called for. The settlement of this dispute should result in the establishment of a flourishing oyster farming industry in the Maritime Provinces.

◆

REVIEW OF BRITISH COLUMBIA'S MINING INDUSTRY

(Continued from page 266).

ers, and the latest level developed, the thirteenth, shows no diminution in grade of ore.

A property which has attracted much attention locally is the Surf Inlet—a gold mine being developed by local capital on Princess Royal Island. The main tunnel is now over 600 feet long and insures a large tonnage of ore of a profitable grade. The western vein has been tapped by crosscut but not extensively developed as yet. Comprehensive tests for treatment of this ore have been made, and though heavy in pyrite is found to yield a high extraction to a straight cyanide treatment, with fine grinding. The property is in a position to establish and maintain a milling plant of 200 tons daily capacity.

At Portland Canal, though a heavy drop so far as stocks are concerned, has occurred, several properties have received attention this year. A long tunnel has been started on the Portland Canal and it is not improbable that when that company renews its milling operations it will be at a reduced cost for mining and treatment, which will render the low grade ore more profitable and restore the confidence of its shareholders. Quantity is undoubtedly available and Mr. Elmendorf shows his confidence in the future by devoting his energy to the efficient opening up of the mine.

Coal Mining is Steady.

On the subject of coal, the Crow's Nest, after their labor troubles, have been producing steadily and supplying the needs of the upper country.

Vancouver Island will suffer in production through labor troubles still unsettled.

At Graham Island drilling has been in progress at the Wilson property and the engineer expresses himself as well satisfied with the quality and quantity of coal in evidence so far as this boring is concerned. Other work has been in progress at Skidegate Inlet and some coal is available for shipment, though proper equipment is not yet supplied.

The Groundhog fields have been extensively examined by prominent coal mining engineers, but all reports are not yet in, and I am only able to say that some of them speak highly of the quality, and the quantity is undoubted. Development in that country is attended by great difficulty in transportation of supplies.

In placer work Cariboo and Atlin have produced at about the same rate as during the past few years. In the former John Hopp has been the chief operator and has an emphatically better outlook for next year. Water shortage hampered him considerably this year, and much work was done in preparation for future operations.

Gold and Platinum.

The Quesnelle Hydraulic Gold Mining Company has demonstrated that they can handle a large yardage of gravel at an extremely low cost but they have not this year entered on their gold bearing gravels. The company, however, does not appear to be discouraged, and the manager is confident as to the future.

In the Similkameen, though considerable attention has been paid to the placers, which contain platinum as well as gold, no real work has been done.

The Omineca country has received considerable attention this year from mining men, several of whom went in on the snow in March and April and remained all summer. Some of those from the States have acquired large holdings both in placer ground and quartz claims, and express themselves very optimistically as to the future of that country. They consider that when it is possible to transport dredging machinery the output from some of these river gravels will be high.

KENORA, ONTARIO, CANADA

PUBLIC UTILITIES

OWNS and **OPERATES** its Hydro-Electric Power, Light and Power distribution, Telephone and Waterworks Systems **AT A PROFIT**, which is applied against the general taxes of the Corporation.

Without a boom in 1912, the cash revenue from Utilities increased over 1911 the sum of $9,500.00. In addition contracts have been completed and signed which will increase the cash revenue in 1913 by at least $20.000.00 over 1912 with but slight increase in operating charges.

IMPROVEMENTS

Kenora spent in 1912 on Roads, $25,000.60; Granolithic Sidewalks, $18,000.00; on Central Fire Station, Fire Appliances and Automatic Alarm System, $50,000.00; on Standard Street Lighting, $8,500.00; on Arc Light System, $2,000.00; and on Water Extensions, $20,000.00.

The Ontario Government finished in 1912 a large Court House and Registry and Land Titles Office at a cost of about $75,000.00; The Rat Portage Lumber Co. built a new modern saw mill costing $50,000.00; the new Subway under C.P. Ry. cost $40,000.00; private residences were also erected at an aggregate cost of $100,000.00.

SUMMER RESORT

The Lake of the Woods is the natural playground of Western Canada and the south and south-western states, and as a summer resort the section adjacent to Kenora is the Beauty Spot of America.

The summer homes have doubled in the last two years. The hotel accommodation is equal to the best in Canada.

GOLD MINING

Gold is found in paying quantities throughout the district, and is attracting considerable attention. The Canadian Homestake Gold Mining Company's property, five miles from Kenora, is being developed, and commencing January 1st, 1913, will be operated from Kenora's Hydro-Electric Plant.

1913 DEVELOPMENT

The Council on their own initiative has engaged one of the best sanitary engineers in Canada to prepare plans for a complete Sewerage and Purification Plant to replace the old method of disposal. The installation of this system will commence in the Spring of 1913, as the Council of the Corporation consider the public health of the first importance.

A general progressive policy will be carried out in beautifying the town, improving conditions, developing our natural resources of Flour Milling, Mining, Lumbering, Paper Pulp and the Lake of the Woods as a summer resort. An agreement is pending for a large Pulp and Paper Mill, which will be erected within the town. This should add from 2,000 to 3,000 to the population.

Kenora is an ideal situation for manufacturing industries. Transportation is of the best, and Western Canada a growing market. Special inducements will be offered manufacturers desirous of locating here.

For further information apply to

M. McCULLOCH, Industrial Commissioner, KENORA, ONT.

OVER TWO MILLION NEW CITIZENS

They Have Come from Forty-five Countries and Have Settled in the Dominion

In fifteen and a half years from January, 1897, to September, 1912, Canada has by immigration added 2,392,361 individuals to her population, divided among the provinces as follows:—

Maritime Provinces	100,821
Quebec	353,896
Ontario	588,672
Manitoba	385,711
Saskatchewan and Alberta	670,984
British Columbia	279,066
Miscellaneous	13,211
	2,392,361

The number of immigrants arriving in Canada during the past season, April to October, 1912, by way of ocean ports was 200,701 as compared with 172,260 during the previous season. This was an increase of 28,441 or 17 per cent. Those who came by way of the United States numbered 100,140, compared with 93,573 in the previous season, this being an increase of 6,567 or 7 per cent. The total immigration for the seven months ended October was 300,841, as compared with 265,833 in 1911. The net gain, therefore, over the previous year was 35,008 or 13 per cent.

Agriculture Leads in Importance.

The homestead entries for the fiscal year ended March 31st, 1912, totalled 39,151 divided among the following nationalities:—

English	5,739
Scotch	1,041
Irish	476
American	10,978
Continental	9,044

While those who were styled farmers and farm laborers entering by the ocean ports numbered 367,702, and from the United States 384,641. The remainder of those making their home in the Dominion were classified as follows:—

	From United States.	Through Ocean Ports.
General laborers	107,167	299,815
Mechanics	46,357	251,251
Clerks, traders, etc.	20,071	80,088
Miners	11,592	32,265
Domestics	5,111	78,776

More Than Fourteen Thousand Orientals.

From the Orient the additions from July 1st, 1900, till September 30th, 1912, have been:—

Japanese	9,966
Chinese	4,461
	14,327

The following is the census record of the increase in Canada's population:—

1871	3,689,257
1881	4,324,810
1891	4,833,239
1901	5,371,315
1911	7,100,000

From reports received from immigration agents, shipping and transportation interests this year will see a continuance of this great annual increase, and of an even better type of immigrant than has come from the old lands.

◆

CANADA, THE PANAMA CANAL AND PAN-AMERICA

(Continued from page 268).

I might describe Chile, with its 2,500 miles of Pacific Coast line in the southern temperate zone; Bolivia, which occupies an area ten times that of New York State; Peru, which would hold the whole Atlantic coast of the United States from Maine to Florida; Ecuador, which is equal to New York three times over; Columbia and Venezuela, which could hold the greater part of Germany and France put together;—but the limitations of space prevent me from going into detailed description of these countries.

If I were to suggest a slogan or watchword for the commercial interests of Canada I would say, "Get ready for the Panama Canal and go after Pan-American commerce."

Galt Gardens, Lethbridge

A City Built on Solid and Permanent Foundations

COAL	The centre of the Western Coal Mining Industry is Lethbridge. The monthly pay-roll from local mines alone is $125,000 and from mines in tributary district $750,000. Coal screenings for power purposes 50 cents per ton.
NATURAL GAS	Situated on the edge of the Southern Alberta gasfield, Lethbridge draws from an inexhaustible supply of natural gas. Maximum domestic rate 35 cents, and industrial rate 20 and 15 cents.
WHEAT	The estimated crop for 1912 of spring and winter wheat from Lethbridge's tributary territory is sixteen million bushels. At the International Dry Farming Congress and Exposition held in October, 1912, the $2,500 prize for the World's best bushel of Hard Winter Wheat was won by Henry Holmes, a farmer living seventeen miles from Lethbridge, and the first prize in every hard wheat class was captured by farmers living in Lethbridge's tributary territory. Lethbridge is an important milling point at present and a milling centre of the future.
MIXED FARMING	The Lethbridge district is the leading mixed farming district in Western Canada. Alfalfa growing, sugar beet growing, with the manufacture of sugar; flax, malting barley and small fruit growing; hog raising and sheep fattening are branches of husbandry extensively engaged in.

The Population of Lethbridge's Tributary Territory Exceeds 100,000

Manufacturers, wholesalers or other business men planning to establish in Alberta should investigate the claims of this city. Write J. L. MANWARING, Secretary, Board of Trade.

TRADING WITH MANY COUNTRIES

Percentage Shares of Imports and Exports—Canada's Commercial Balance Sheet

The trade of Canada has been growing rapidly during recent years. Forty-four years ago, a few years after The Monetary Times was founded, it totalled $131,027,000. Selecting representative years, we have the following figures:—

Year.	Total trade.
1873	$217,801,000
1878	172,405,000
1883	230,339,000
1888	201,097,000
1893	247,638,000
1898	304,475,000
1903	467,064,000

Then came vaster strides, represented by a total in the year 1908 of $650,793,000; year 1909, $571,268,000; year 1910, $693,211,000; year 1911, $769,390,000, and last year greatest total of all, $874,637,794.

What the Figures Represent.

These figures include imports of merchandise, coin and bullion, exports of Canadian and foreign produce, coin and bullion. If merchandise imported and Canadian goods exported only are dealt with, the totals would be $533,286,663 inward and $307,716,151 outward for the latest year, an aggregate of $841,000,000; coin and bullion counting for about $33,000,000; foreign produce exported $17,492,294. Of the six divisions in which Canadian exports are classified by the authorities, the most important in volume is agricultural products; and next to them animals and other products. The place of each group with respect to the total of $290,223,000 exports in 1912 is shown in the table which follows; shown also in percentages:—

	From the mine.	Fisheries.	Forest.
	14.24 %	5.75 %	14.09 %
1912	$41,324,000	$16,704,000	$40,892,000

	Animal products.	Field produce.	Manufactures.
	16.64 %	36.92 %	12.36 %
1912	$48,210,000	$147,143,000	$35,836,000

More than twice the value of any other division of our exports is derived from produce of the field; next to these are animals and their products; next to these the mine, and then the forest; manufactures have increased to one-eighth of the whole $290,000,000 of Canadian products; our fishery product has dwindled to less than 6 per cent.

Exports and Imports for Three Years.

In an article appearing in the previous annual number of The Monetary Times, the percentage of exports from and imports to Canada was given by countries. This cited the proportions of inward and outward trade for the fiscal years 1910 and 1911. These figures are repeated below, together with the figures of 1912.

Imports into Canada from	1910. Per cent.	1911. Per cent.	1912. Per cent.
United States	59.47	61.68	64.17
Great Britain	25.47	23.79	21.99
France	2.69	2.50	2.24
Germany	2.11	2.17	2.09
West Indies	1.95	1.54	2.30
East Indies	....	...	1.00
South Africa	1.65	1.53	...
Holland and Belgium	1.74	1.16	1.15
Other countries	4.92	5.63	5.06
Total	100.00	100.00	100.00

Exports of Canada to	1910. Per cent.	1911. Per cent.	1912. Per cent.
Great Britain	49.65	46.48	49.34
United States	37.54	41.08	36.20
West Indies	1.97	1.38	1.13
France and Germany	1.70	1.83	1.93
Holland and Belgium	1.61	1.40	1.46
South America	1.57	1.40	1.64
Newfoundland	1.31	1.33	1.40
Australia	1.12	1.66	1.22
Other countries	3.53	3.35	5.68
Total	100.00	100.00	100.00

Of Canada's imports, eighty-five to eighty-seven per cent. have come from the United States and the British Islands for years in succession; and the same proportions almost exactly characterize our exports to these countries. It deserves to be noted that Canada's exports to France, Germany and South America show an increase of recent years. Our imports from the United States have reached a record share in 1912 (64 per cent. of the whole), but of exports the Mother Country still gets the largest share; it amounted to $151,000,000, or 49.34 per cent. in the fiscal year 1912.

Came in Duty Free

Nearly half the value of the imports of Canada were admitted free of duty. This fact has proved a stumbling-block to many who could not understand why, for example, we should admit last year $186,000,000 of goods free, and levy all the duties necessary to raise revenue upon the remaining $335,000,000 of imports. The goods admitted free of duty were either necessaries, such as coal, which, as Nature has planted none in our two great provinces of Quebec and Ontario, we are forced to buy abroad, or articles for the use of our growing manufactures, asphaltum for our streets, hides, skins and rubber for our foot-wear, hemp and binder twine for our farmers, broom-corn for our housewives

The accompanying balance sheet of Canada's commerce has again been supplied to The Monetary Times by the Department of Trade and Commerce at Ottawa. It shows that we are trading with more than seventy countries.

WORLD'S OUTPUT OF DIAMONDS

So far as can be gleaned from official statistics, the current product of rough diamonds has reached about eight million carats a year, valued at about $50,000,000, as follows:

Country.	Carats.	Value.
British South America	5,586,625	$41,000,000
German Southwest Africa	1,000,000	6,000,000
Brazil	100,000	1,000,000
British Guiana	3,000	30,000
British India	1,000	50,000
United States	....	2,000
All others, say	1,309,375	1,918,000
Totals	8,000,000	$50,000,000

◆

Mr. T. H. Mawson, the landscape architect and town planner, after a long trip in Canada last year, during which he completed preparations for revolutionizing the looks of one city, planned a new one, and began negotiations for transforming a third, said: "Vancouver will be a sort of Paris in some ways, when the city fathers get through with my plan. It will revolve about a sort of Place de l'Etoile on a miniature Champs Elysées with a Tuileries gardens and palace at one end, though, instead of having Rand Point in its Elysian Fields, it will have a Round Pond. It will be easier to pronounce, and the water is already there. The cost will be so great that the work will be spread over a period of from 10 to 20 years."

CANADIAN AND UNITED STATES CROPS

(Continued from page 258).

Last year's rye crop contains 35,422,000 bushels and is the largest one produced. Its value is $24,000,000.

The rice crop is about 8 to 10% above the average production. The value may amount to more than $20,000,000. The buckwheat crop is the largest since 1868 and amounts to $10,124,000 bushels, worth $12,000,000. Our hop crop, estimated at 44,500,000 pounds, is worth about $11,000,000.

Seven Cereals Worth Three Billions.

The total production of the seven cereals is 5,609,807,000 bushels, a bulk of food so large as to be entirely beyond understanding. The combined value of this great mass of cereals is a little over $3,000,000,000 and is 15.8% above the average of the previous five years.

The beet sugar crop of 1912 amounts to about 700,000 short tons, or a gain of about 100,000 tons over the preceding year. The beet sugar production of 1912 is about one-fifth of the national consumption of sugar. If the by-products of beet sugar manufacture are included, the value of this industry in 1912 is about $67,000,000.

The cane sugar industry fared badly on account of the Mississippi River flood, and the value of all the products of the industry is only about $34,000,000.

If to the value of the products of the beet and cane sugar industries are added the value of the sorghum sirup and maple sugar and sirup made on farms the total is about $117,000,000.

REVIEW OF MINING IN ONTARIO

(Continued from Page 255).

magnificent equipment, giving full reports to the public, paying a dividend of 3% every four weeks and accumulating a substantial reserve.

The Vipond and the McIntyre have also had mills in operation and have produced gold steadily in unstated but much smaller amounts than the two big mines. Several other mines in the same camp have done excellent development work and are erecting, or planning the early erection of mills. One year ago the best one could say was that there were certainly two good mines in the camp, and probably some more; now we can say that there are at least six mines in the camp that will pay, and probably several more. An added evidence of the worth of the camp is the opinion of the miners, expressed by their recent strike tactics. The Miners' Unions are not justified in undertaking the strife of strikes unless a camp shows signs of permanency, but just as soon as a camp appears strong it is policy for the Union to assert itself. Envoys from the Western Federation have been in the camp for some months and a general miners' strike was in progress late last year, despite the fact that a board of conciliation appointed under the Lemieux Act reported that the conditions were excellent and the wages satisfactory. The large mines are apparently maintaining their output despite the strike.

Conditions are Healthy.

Outside of the township of Tisdale which contains the Porcupine camp proper, results have not been so bright, but there are many showings that will probably improve as they are developed.

Both in Swastika and in Larder Lake camps there was some activity and stamps were dropping and produced a small but promising amount of gold.

In the Sturgeon Lake district in the far Western part of Ontario, the old St. Anthony is being worked by a company, with Mr. George Glendinning at its head, with satisfactory results. All these results have awakened a new endeavor in gold mining in many parts of Ontario and the new conditions are much healthier than we have ever had before.

◆

The gold output of the Yukon during the past year was valued at about $5,000,000, according to Dr. Alfred Thompson, M.P., of Dawson.

AN EFFICIENT CIVIL SERVICE

The report on the organization of the public service Canada, made on behalf of the Dominion Govern-nt by Sir George Murray, indicates that we have con-erable improvements to make in our national service. r the creation and maintenance of an efficient civil vice, Sir George states that three essential conditions e required:—

"(1) The best material in the country must be tracted into it and induced to remain there.

"(2) To this end the service must be so regulated to provide a permanent career, in which promotion ll depend on individual merit exhibited in the daily rformance of duty.

"(3) It follows from this that the mutual relations Ministers and civil servants alike must be conducted th a loyal and single-minded devotion to the public rvice, from which all considerations dependent on the litical views of individuals should be wholly excluded.

"Whether and how far it is possible to realize these nditions," he adds, "it is not for me to say, but I feel nfident that until they are realized the public service ll not be such as the Dominion is entitled to expect such as is essential for the proper transaction of business."

In plain words, we must take the civil service out politics, and that is a big, although imperative task. e best material of the country has not always been tracted to Ottawa, and when it has been, it has not ways been induced to remain there. Poor remunera-on and the knowledge that promotion will not always depend on individual merit shown in the daily duties, has caused many men who would be valuable in the civil service to seek careers elsewhere, both to their and their employers' advantage. The civil service in Canada is likely to remain in a more or less thick political atmosphere for many years to come, but there is no reason why a beginning cannot be made to build up a service based on the foundations indicated by Sir George Murray.

His excellent report deals with the methods employed in the transaction of public business and the control of appropriations and expenditure. Sir George suggests that the estimates are subjected to a somewhat cursory examination, owing to pressure of time, and that their inspection is directed rather to the totals of the votes than to the details. He thinks that instead of the oral discussions respecting estimates by the Ministers in Council, effective control can be secured only by persistent criticism of details carried on by written correspondence in the first instance, and under conditions which permit of a thorough examination of the proposals.

If this idea is carried out, a small effort will have been made to take part of the service out of politics. Sir George also suggests the abolition of the Treasury Board. Their small duties, he thinks, could be discharged by the various departments concerned, and their more important duties under the Bank and similar acts could be equally well discharged by the Minister of Finance.

The report also deals with the administrative methods and operations of the chief spending departments, and generally with the manner in which the public business of the Dominion is administered. Sir

George proposes the amalgamation of the Departments of Customs and Inland Revenue which seems to be a logical consolidation.

Dealing specifically with the development of our country's natural resources, Sir George says: "In laying down a policy to be adopted in such matters questions of great complexity will arise which must be treated from a comprehensive point of view, and which require for their elucidation the highest technical and professional skill which can be made available.

"The carrying out of the policy when decided on, and the execution of the necessary works must, of course, be left to the particular Department dealing with the matter in hand. This departmental autonomy is necessary for administrative purposes, and must clearly be maintained; but it has two drawbacks. In the first place it results in questions being dealt with in a fragmentary or piecemeal fashion without sufficient consideration of all their various aspects; and in the second place, the technical officers of the Departments, being mainly occupied with the projects and business of the moment, have not sufficient time to deal in a deliberate manner with all the problems involved, many of which do not directly concern their own Department and may consequently be lost sight of altogether.

"For example, almost every waterway may be considered from at least two points of view. It may be utilized either for purposes of navigation or for the purpose of the production of power. These two objects may, and probably will, be antagonistic to each other. It may happen that the Department dealing with one is not the Department dealing with the other; and in that case one or both of the Departments will in all probability be found to be acting independently. Yet it is clear that a sound judgment can only be formed on a careful balance of all the considerations affecting the subject."

He suggests that the Commission of Conservation is not adequately equipped with expert assistance, without which the best results cannot be achieved, and that the size of the Commission, thirty-two members, is inconveniently large for practical purposes. He recommends the appointment of a small permanent Commission of three, or at the most five members, who should devote their whole time to the work, and who should be assisted by a staff of the best experts procurable, either in Canada or elsewhere. Sir George is to be complimented upon his well-considered report, which should have considerable attraction for both Liberal and Conservative governments, which have, as one of their ambitions, an efficient civil service.

WAR AND SECURITIES

The war clouds in Europe have cast their shadow over the stock markets of our own continent. Men have been weighing the financial consequences which would follow a conflict between the great powers of Europe. But, as the Wall Street Journal points out, stress is commonly laid upon the mass of securities dealt in by the bourses, and too little upon the enormous wealth which lies behind, and is ever ready to support them. This is mainly due to the fact that the securities can be more or less accurately measured, while the aggregate wealth of the commercial world is little known.

Mr. E. Terry, a well-known French economist, estimates that Europe possesses, at present, about $150,000,000,000 nominal capital in public securities, representing together the producing plant, the working capital of trade, commerce, and agriculture, reserves for the future, etc. These securities increase annually by four or five thousand millions; and from the ease with which they can be converted into money, they circulate from hand to hand just like coinage. The same thing applies to bank notes, cheques, and bills of exchange. In ordinary times, he says, that organization works well, but calamity is predicted in case of a general European war.

It is not clear if the term "Europe" includes th United States or not; but, judging from the solidarit of all commercial bourses, it is a fair presumption tha it does. Therefore, these $150,000,000,000 substantiall measure the "securities" of the commercial world What lies behind them is shown in our New York con temporary's estimate of the wealth of the commercia world:—

Country.	Population, millions.	Wealth, millions
United States, 1912, computed....	95·3	$130,00
Great Britain, 1909, computed....	45·0	88,72
France, 1909, computed	40.1	83,00
Germany, 1909, computed	64.0	63,50
Russia, 1910, computed	146.8	60,00
Austro-Hungary, 1910, estimated..	51·3	46,17
Italy, 1908, estimated	34·0	30,60
Spain, 1912, estimated	20.0	14,00
Turkey, 1910,* estimated	24.0	9,60
Belgium, 1907, estimated	7·3	10,95
Holland, 1909, estimated	6.0	9,00
Balkan states, 1910, estimated....	14.0	7,00
Switzerland, 1910, estimated	3·5	3,03
Sweden, 1908, computed	5·4	2,197
Portugal, 1910, estimated	5·4	2,70
Denmark, 1906, estimated	2.6	2,34
Norway, 1910, estimated	2·4	1,40
Greece, 1907, estimated	2.6	1,30
North and South America, except United States, estimated	70·3	34,448
Total	640.0	$600,00

* Egypt and Tripoli both excluded.

The securities are $150,000,000,000, while the wealth is $600,000,000,000, or four times as much. If this is not considered a sufficient guarantee of stability, there is, besides, an annual increment to this wealth of between two and three per cent. That seems to render assurance doubly sure, and may be regarded perhaps as a silver lining to the black clouds.

LA BANQUE INTERNATIONALE

Judge Leet's decision regarding the charges against officials of La Banque Internationale will be announced—

When?

SMALL CHANGE

Only 301 days to 1914.

* * * *

Congratulations to Sir Frederick Taylor!

* * * *

Dynamite is no friend of the sane labor cause.

* * * *

Single tacks in Ontario may puncture the premier.

* * * *

"You will find it in *The Monetary Times* Annual."

* * * *

Wilson seems to have as much surplus cabinet timber available as did Borden.

* * * *

Canada's total trade for the twelve months of 1912—one and nine noughts dollars.

* * * *

As a holiday offering, a well-staged scandal seems to have bank act revision beaten.

* * * *

If you did not get a New Year's honor, the Minister of Militia may oblige you with a colonelcy.

HOW TO STANDARDIZE THE DOLLAR

rofessor Fisher's Plan Would Decrease or Increase Weight of Gold Bullion to Have a Dollar of Constant Purchasing Power

Considerable publicity is being given Professor Fisher's an. The following is Professor Fisher's plan for converting e gold dollar into such a composite unit, thus "standardiz- g" the dollar. Such standardization would be effected by creasing or decreasing the weight of gold bullion constituting e ultimate dollar in such a way that the dollar shall always y the same average composite of other things.

We now have a dollar of constant weight in gold but of riable purchasing power. If the proposal here described ere adopted we should have a dollar of constant purchasing wer but of variable weight.

It would not be necessary to vary the actual dollars, paper coin in circulation. It would only be necessary to vary the eight of gold bullion into which these dollars are inter- nvertible.

llar is Interconvertible

Every dollar in circulation derived, practically, its value purchasing power from the gold bullion with which it is in- rconvertible. Every dollar is now interconvertible with 25.8 ains of gold bullion (nine-tenths fine) and is, therefore, worth atever this amount of bullion is worth.

The very principle of interconvertibility with gold bullion ich we now employ could be used to maintain the proposed ndardized dollar. The government would buy and sell gold llion just as it does at present but not at an artificially and mutably fixed price.

At present the gold miner sells his gold to the mint, re- ving one dollar, in (say) gold certificates, for each 25.8 grains gold; while, on the other hand the jeweler or exporter buys d of the government, paying one dollar of certificates for ery 25.8 grains of gold. By thus standing ready to either y or sell gold on these terms (one dollar for 25.8 grains), the vernment maintains exact parity of value between the dol- and the 25.8 grains of gold. Thus the 25.8 grains of gold llion is the virtual dollar.

ferent Weights of Bullion

The same mechanism could evidently be employed to keep dollar equivalent to more or less than 25.8 grains of gold, decided upon from time to time. Mexico and some South erican countries have dollars different from ours simply ause they are interconvertible with different weights of d bullion.

The change in the virtual dollar (bullion weight of gold erconvertible with the dollar) would be made periodically, or e a month, not by guesswork or at anybody's discretion, according to an exact criterion. This exact criterion is nd in the now familiar "index number" which tells us ether the general level of prices is, at any time, higher or er than it was. Thus, if in any month the index number s 1 per cent. above par, the virtual dollar would be in- ased 1 per cent. Thus the dollar would be "compensated" the loss in the purchasing power of each grain of gold by reasing the number of grains which virtually make the lar.

ight of Gold Coins

It would not be necessary to change the weight of the ac- l gold coins. So long as these are interconvertible with a vier weight of gold bullion they would be worth this weight bullion. They would be mere tokens, "brass checks," as it re, to bullion, or gold certificates printed on gold instead of paper. The plan would be simplified, however, if all gold ns were abolished and only paper certificates to gold bullion re employed. In that case the virtual dollar, or weight of d bullion interconvertible with a dollar of certificates, could reduced, if need be at any time, below 25.8 grains as freely it could be increased above that weight. Provision against culation in gold embarrassing to the government would be de by a small government fee for its services in buying and ing gold.

Professor Irving Fisher, of Yale University, is one of the st distinguished economists of this continent.

PROMOTER SENT TO TRIAL

Mr. A. L. Ruthven, promoter of the Dominion Automatic ain Control Company, has been committed for trial by dge Leet in the Enquete Court on an indictment charging n with obtaining money under false pretences. In com- tting Ruthven for trial Judge Leet said there was no doubt at the apparatus which was exhibited in the Dominion mpany's office in the Transportation Building, Montreal, d which proved the inducement for investors, was im- acticable.

◆

The Canadian National Exhibition Association, Toronto, s handed over to the city $40,024 profits from the last ex- ition, [illegible] pared with $36,431 for 1911.

CANADA IMPORTS MUCH CLAY

Chiefly From Great Britain and United States—Miscellaneous Products Shows Increase.

Canada's clay imports are classified by the department of customs under three main subdivisions: clays, brick and tile, and earthenware and chinaware, and their total value is shown as $5,156,544, or 62 per cent. of the domestic production, in the annual report of Mr. J. McLeish, B.A., chief of the division of mineral resources and statistics. The imports of clays in 1911 were valued at $270,247, and included chiefly china clay and fire clay, with a small quantity of pipe clay, and others clays not classified. The value of china clay imports was $125,768, and of fire clay, $125,199.

The imports of these clays have varied considerably from year to year, and do not show the same general increase as do the imports of manufactured clays. The imports classified under brick and tile were valued in 1911 at $2,369,761, of which about 34 per cent. was firebrick, other important items being building brick, sewer pipe, and paving brick.

There was also an importation under this class of manufactures of clay not specifically designated, valued at $523,998. The imports of these "unclassified" brick and tile have increased steadily year by year, the value of such imports in 1905 having been only $20,804. The total imports of brick and tile in 1910 were valued at $1,755,773, showing an increase in 1911 of about 35 per cent.

Table and Sanitary Ware

The imports of earthenware and chinaware, of which the most important class is tableware, were valued in 1911 at $2,516,536, as against $2,283,116, an increase of about 10 per cent.

There is also a considerable annual importation of "chalk, china or cornwall stone, cliff stone and feldspar, fluorspar, magnesite ground or unground," much of which is no doubt used in connection with the manufacture of clay products.

The value of these imports during 1911 was $147,640; of which $90,119 was from the United States, $54,548 from Great Britain, and $2,973 from other countries. The value of the imports under this item during the calendar year 1910 was $121,959.

There is also an annual importation of "baths, bath tubs, basins; closets, lavatories, urinals, sinks, and laundry tubs of any material," the value of such imports during 1911 being $285,847, as compared with $262,667 during the year 1910.

From Many Sources

Imported clay products are derived chiefly from Great Britain, and the United States, although considerable quantities of earthenware, china, and porcelain ware, white granite or ironstoneware, etc., are brought from Germany, France, Austria-Hungary, and Japan.

Of the brick and tile imported, 76.7 per cent. was from the United States and 23.2 per cent. from Great Britain; and only $578 worth from other countries.

Of the earthenware and chinaware, 62 per cent. was imported from Great Britain; 15 per cent. from the United States; 9 per cent. from Germany; 7 per cent. from France, and considerable values also from Japan, Austria-Hungary, and other countries. The crude clays were imported principally from Great Britain and the United States.

NEW COMPANY CHARTERS

The secretary of state has issued the following table, showing the expansion of Canadian business by the number of new companies formed with Dominion charters, and the amount of capital obtained for their development during the past 12 years, the years ending on March 31st:

(3 ciphers omitted).

	No. of companies.	Total cap'n of new Co.'s.	Increased cap. of existing Co.'s.	Grand total.
1900	53	$ 9,558	$ 3,351	$ 12,909
1901	55	7,662	3,420	11,082
1902	126	51,182	5,055	56,237
1903	187	83,405	5,584	89,259
1904	206	80,597	3,366	83,963
1905	293	99,910	9,685	109,595
1906	374	180,173	32,403	212,576
1907	378	132,686	19,091	151,778
1908*	64	13,299	865	14,164
1908-9	366	121,624	72,293	193,917
1909-10	493	301,788	46,589	348,377
1910-11	544	458,415	24,715	483,131
1911-12	658	447,626	42,939	490,565

*First three months.

An interesting compilation of charters issued during the twelve months of 1912 will appear in The Monetary Times annual number next week.

CAPITALIZATION OF RAILROADS

Professor Adam's Basis for Computation — Valuable Summaries—Canada's Railways Estimated at Over Sixty-four Thousand Dollars Per Mile

Valuable statistics on the capitalization of American and foreign railroads have been given by Mr. Slason Thompson, manager of the bureau of railway news, Chicago. He says that the only railway capitalization of public concern is that which represents the actual money which has been invested to provide the means of transportation by steam railroads for the people and commerce of the United States. He says that the present day talk about the water in American railway capitalization is kept alive by the parade in official print of aggregate figures of which less than 80 per cent. is active capital "to be supported by freight and passenger rates."

"The crime," states Mr. Thompson, "of misrepresenting the capitalization of American railways is against the American people because the false cry of over-capitalization makes it difficult to obtain on reasonable terms the additional capital for improvements and extensions for which there is a crying necessity.

The Claim of Railway Securities on Railway Revenues.

"Following the formula adopted by Professor Adams to ascertain the only capitalization that 'measures the claim of railway securities on railway revenues,' the returns received by this bureau from 232,117 miles of operated line (190,924 owned and 41,188 rented) yield the following result for the year ending June 30, 1911:—

The following is a summary showing net capitalization of 378 companies operating 232,117 miles of line for the year ending June 30, 1911:—

Item—	Capitalization, (190,929 miles owned), 1911.
Capital stock	$6,988,087,937
Funded debt	9,344,729,433
Receivers' certificates	12,955,503
	$16,345,772,873
Rental 41,188 miles, $127,267,386, capitalized at 5 per cent.	2,545,347,520
Total	$18,891,120,393
Deductions for railway stock owned	$3,065,378,211
Deductions for funded debt owned	1,687,838,570
	$4,753,216,781
Net capitalization 1911 (232,117 miles)	$14,137,903,612
Net capitalization per mile operated	61,340

"It is a question whether the above capitalization should not be further reduced by deducting therefrom $809,465,180 for other stocks ($615,048,044) and funded debt ($194,417,136) not railway issues owned by the railway companies, and which paid $33,272,072 into their treasuries, thereby relieving freight and passenger rates of fixed charges to that extent.

Approximation of the Net Capitalization.

"Accepting $14,137,903,612 as the net capitalization of the 232,117 miles of line reporting to this bureau, it only remains to place a reasonable estimate on the 11,112 miles not covered by these reports to arrive at a close approximation of the net capitalization of all the railways of the United States. Estimating this at $30,000 a mile ($25,000 would be liberal), the account would stand as follows:—

Net capitalization, 232,117 miles represented	$14,137,903,612
11,112 miles at $30,000	333,360,000
Total for 243,229 miles represented	$14,471,263,612
Less assigned to "other properties" in 1910	36,953,808
Net capitalization all railways in United States in 1911	$14,434,309,804
Net capitalization per mile of line	59,345

"This computation includes mileage operated under trackage rights, for the sound reason that the rental for such rights is included in the capitalization item of other rentals at 5 per cent. given above.

"In 1910 the commission reported $14,338,575,940 as the amount then outstanding in the hands of the public against 228,841 miles owned. Allowing for differences in methods of arriving at results, these figures strongly corroborate those computed from the returns to this bureau.

"Previous to 1907 the commission included in its report a valuable table giving the amount of stocks and bonds outstanding, together with the amount of both owned by railway corporations, from which it was possible to calculate approximately their net capitalization for any given year. Under the new accounting, this statement has been omitted, although the railways are still required to furnish the data. In order to preserve the continuity of this important record, the next statement shows the gross railway capital, securities owned, net capital outstanding in the hands of the public, together with its amount per mile since 1889, when these figures were first compiled. Except those for 1911, the figures are from official reports.

Year—	Railway Securities Owned.	Net Railway Capital.	Net Railway Capital per Mile.
1911 Bureau	$4,753,216,781	$14,434,309,804	$59,345
Official—			
1910*†	4,078,556,298	14,338,575,940	62,657
1909*	‡3,776,001,202	13,711,867,733	59,259
1908*	3,933,953,317	12,833,591,510	57,201
1907	3,161,794,135	12,920,352,548	58,298
1906	2,898,480,829	11,671,940,649	54,421
1905	2,638,152,129	11,167,105,992	53,328
1904	2,501,330,601	10,711,794,078	52,099
1903	2,318,391,953	10,281,598,305	51,559

1901	2,205,497,909	9,482,649,182	49,925
1900	1,943,050,349	9,547,984,611	51,092
1899	1,601,913,167	9,432,041,731	51,215
1898	1,521,383,255	9,297,167,776	51,856
1897	1,466,936,176	9,168,071,898	51,396
1896	1,501,346,914	9,065,518,857	51,141
1895	1,447,181,534	8,899,572,695	51,421
1894	1,544,058,670	8,646,600,008	50,358
1893	1,563,022,233	8,331,603,006	50,293
1892	1,391,457,053	8,294,689,760	52,348
1891	1,282,925,716	8,007,989,723	50,858
1890	1,406,907,001	7,577,327,615	49,473
1889	1,151,972,901	7,422,073,841	50,013

---

*Does not include returns for switching and terminal companies. †In 1910 the per mile divisor was 228,841 miles owned. ‡If railway securities owned in 1908 is correct, the amount for 1909 is about $300,000,000 below what it should be.

Railway Capital Distributed among Territorial Groups.

"The summaries in the official statistics for 1910, 1900 and 1890 distribute railway capital among the territorial groups as follows:—

Territory covered. Group—	1890.	1900.	1910.
I	$ 377,417,302	$ 472,329,210	$ 799,627,536
II	2,032,242,616	2,337,874,067	3,543,053,383
III	1,309,390,715	1,490,997,662	2,414,370,374
IV	410,704,029	631,863,020	960,183,380
V	742,670,372	903,681,993	1,346,913,136
VI	1,818,588,865	2,024,541,064	3,102,203,094
VII	443,136,450	560,763,313	1,047,244,431
VIII	1,047,274,401	1,395,350,723	2,260,370,943
IX	372,982,285	511,034,132	808,905,131
X	882,876,385	1,162,599,776	2,134,260,830
Total	*$9,437,343,420	$11,491,034,960	$18,417,132,238
Less stocks and bonds owned	1,406,907,001	1,943,050,349	†4,078,556,298
Net railway capital	$8,030,436,319	$9,547,984,611	$14,338,575,940

---

*Includes $453,108,804 "other forms of indebtedness" excluded in other years. †Includes $36,953,808 assigned to "other properties."

"Owing to the complexity of ownership in which the capital issues of a railway company in one territory are owned by the companies in other groups, it is impossible to offset stocks and bonds owned against the respective groups and so arrive at their net capitalization.

American Railways' Comparatively Low Capital Cost.

"Nothing can demonstrate more clearly the comparatively low capitalization of American railways than the following statement of the capital cost, or cost of construction, of the railways of the principal foreign countries, compiled from the latest available data:

Year. Country.	Miles of line.	Capital or cost of construction.	Per mile.
Europe—			
1910—United Kingdom	23,387	$6,421,170,080	$274,557
1909—Germany	36,235	4,048,810,560	111,737
1908 *Russian Empire	41,888	3,294,070,000	78,661
1908—France	25,040	3,550,874,000	141,50
1909—Austria	13,873	1,609,853,523	116,04

ear. Country.	Miles of line.	Capital or cost of construction.	Per mile.
Europe—			
)09—Hungary	12,562	814,534,000	64,841

)11—†Victoria	3,505	206,804,550	59,000
)10—United States	228,841	14,338,575,940	62,657

---

*Includes Asiatic Russian railways. †New South Wales ilways are 4 feet 8½-inch gauge; New Zealand and Queens- nd, 3 feet 6-inch, and Victoria (all but 121 miles) 5 feet inch.

"The nationalization of the railways of Japan has raised e 'cost of construction' from 411,559,035 yen for 4,783 miles, o-thirds private, in 1906 to 753,836,988 yen capital invested 5,020 miles, nine-tenths Government, in 1909. Any such ancial prestidigitation in American railways would boost eir capital account 80 per cent.

"The Archiv for Eisenbahnwesen' for June, 1911, esti- ates the total capital cost of the railways of the world in 09 at $53,280,000,000 in round numbers, of which $25,161,- 0,000 is apportioned to Europe and $28,111,200,000 to the st of the world. In this estimate the average capitalization r Europe is placed at $123,100 per mile and for the rest of e world at $66,968 per mile."

PERSONAL NOTES

Mr. J. A. Glasford has resigned his position as manager Union Terminals at Winnipeg.

Mr. G. Brooks Stewart, formerly of the Sun Life Insur- ice Company, has accepted an appointment as inspector of ents in the Mutual Life Insurance Company.

Mr. T. Bienvenu, general manager of the Banque Pro- nciale, has been appointed a director of the Guardian As- rance Company, in place of the late R. Wilson Smith.

Mr. J. W. Blackwell, vice-president of the Merchants ank, and president of the Guardian Accident & Guarantee ompany, has joined the board of trustees of the Guardian ssurance Company Limited,

Mr. J. R. K. Bristol, chief Dominion appraiser and mem- r of the board of customs of the Dominion government, s been appointed manager of the tariff department of the anadian Manufacturers' Association, succeeding Mr. R. W. eadner.

Mr. Thomas W. Learie, in charge of the credit and ad- rtising department of the Western Canada Flour Mills ompany, Limited, Winnipeg, has resigned to accept an ap- intment with the Canadian Credit Men's Association, as cretary-treasurer of its Toronto branch.

Mr. F. Chattan Stephens, and Mr. C. W. Root, have been ected members of the Montreal Stock Exchange. Mr. ephens will continue the brokerage business he recently rmed under the name of F. C. Stephens & Company. Mr. oot will act as the floor member of the firm of C. Simpson arland & Company, while Mr. Garland will be office repre- ntative.

Mr. Arthur Stewart, who has been manager of the Winni- g branch of the National Trust Company since its incep- on, has been elected a director on the western board of the mpany. Some time ago Mr. Stewart intimated to the ficials of the company in Toronto that he would like to be lieved of the details of the company's management here, so at he might be able to devote more time to his own personal terests. The company has now acceded to Mr. Stewart's re- est, and being desirous of retaining the benefit of his long perience of the company's affairs and his advice on matters enerally pertaining to the west, has made him a director of the company. Mr. D. H. Cooper, who succeeds to the posi- on of manager, has been assistant manager of the company Winnipeg for some years, and is well known here and roughout the west.

CANADIAN PACIFIC BUILDERS

Sir Thomas Shaughnessy Tells of the Risks Taken by the Syndicate Which Built the Line

In a speech at Montreal, Sir Thomas Shaughnessy said:—

"When I first joined the company I became general purchasing agent and afterwards assistant to the general manager, and no one remembers better than I the enormous risks the 'syndicate' took in the construction of the transcontinental line. Mr. George Stephen, later Lord Mount Stephen, and his associates staked their entire personal fortunes, and at one time it looked as if their personal fortunes did not have much chance. When the successful time came there were those who spoke of the government subsidies in a not very enthusiastic manner and pronounced them unduly liberal, but in 1881 and 1885 the investing world did not view them in that light. In those early days it was almost impossible to secure money for the prosecution of the work.

Work of Van Horne.

"It was only the indomitable will and devotion of the general manager and vice-president of that day, Mr. Van Horne, that the work was carried forward to completion. For several years we had a struggle in the Northwest owing to dissatisfaction resulting from the 'monopoly clause' of the contract, which provided that for a period of twenty years no other railway could be built between the Canadian Pacific and the United States boundary. After much discussion and a good deal of friction this monopoly clause was finally cancelled by the Dominion government, giving us as a consideration for it a guarantee of 3½ per cent. on the land grant bonds of the company to the extent of $15,000,000 secured by its entire land grant, and that land grant that is to-day such a rich asset was not then considered worth $15,000,000 because the bonds, even with the government guarantee, only yielded the company about 90 cents on the dollar.

Not One Large Fortune.

"Notwithstanding the vast risk that was taken by the men who built the Canadian Pacific, I can truthfully say that not one large fortune has been made out of the affairs of the company. Lord Mount Stephen, who of course was in the front rank, was the man of resourcefulness who was willing to risk everything. Retiring from his connection with the company in 1885, he sold his three or four thousand shares of stock for 53. His connection with the company was a source of distinct financial loss to him. Lord Strathcona still keeps his five thousand shares, and of course he is participating in the advantages resulting from new issues from time to time. With this exception not one single man connected with the Canadian Pacific Railway Company has made what might be considered even a reasonable amount of money from his financial connection with the company. It has been an understood thing from the beginning that no director should either speculate in stock or should take advantage of any information secured by reason of his membership on the board, and in all my experience there has never been an occasion to find fault with any member of the board for speculating in stock or for utilizing to his own advantage inside information that he possessed, and I have never found it necessary to ask any officer of the company to tender his resignation because he was engaged in affairs that were not consistent with his duty to the company."

FIRE CHIEF'S HINTS TO BUSINESS MEN

Here are some useful hints to business men by Fire Chief Davis, of Victoria, B.C.:—

"Stop the practice of tying electric drop wires by string or wire, and disallow paper shades to be placed around the bulbs.

"At the closing hour all windows are to be shut and all electric lights are to be shut off except in hallways or stairways.

"No inflammable material (paper, cardboard, cloth, wood, and so forth) to be placed near steam radiators or pipes.

"In smoking in your office, do not throw ashes of cigar or pipe, or the unburnt match, into the waste paper basket.

"All oily waste, floor sweepings and other refuse must be placed in a proper receptacle, provided for that purpose, and it is your duty to see that they are emptied each day.

"See that the door over switch and panel boards are at all times kept closed."

GRAND TRUNK PACIFIC CONSTRUCTION

One Hundred Miles of Railroad Built Monthly Last Year—Six Hundred Miles of Branch Lines

The work accomplished by the Grand Trunk Pacific Railway for the twelve months ended December 20th is contained in the chief engineer's annual report issued in Winnipeg. It shows that construction has been undertaken on 563 miles of main line, and on 688 miles of branch lines, making a total of 1,251 miles of line on which clearing, grading and track-laying have been done. Track has been laid on 128 miles of main line, and on 331 miles of branch lines, making a total of 459 miles of railway completed exclusive of second tracks and sidings.

On the section known as ''main line Winnipeg west,'' grade is now completed to mile 1,124, Rau Shuswap crossing, and track should be laid to that point before the close of the year. The line is in operation from Winnipeg to Tete Jaune Cache, mile 1,095. From the Rau Shuswap crossing at mile 1,124, westerly to mile 1,403 (Endako river crossing), the right of way is being cleared and at those points where clearing has been completed, active grading operations are under way. For instance, the grade from Rau Shuswap crossing to the second crossing of the Fraser river at mile 1,190, should permit of track laying in the space of a month or two.

Work is Nearing Completion

From Prince Rupert easterly the track is laid to mile 189, being held up at that point, owing to the erection of steel bridges. Eighty-nine miles of this track were laid during 1912, and the line is in operation to Hazelton. From mile 189 to the Endako river crossing (mile 341 Prince Rupert, or mile 1,403 Winnipeg), active grading operations are in progress.

Harte to Brandon—Grading is under way on this branch and although 10.8 miles are ready for track no steel has yet been laid. The total length of this branch is 25 miles. Regina to international boundary, only the last 19 miles of this line require to be graded. The track is laid for 106 miles, and was all put down this season.

Prince Albert Branch—This line extends from Young on the main line, and is in operation from that point to Wakaw, a distance of 67 miles. No track was laid in 1912. A large steel bridge has yet to be erected over the South Saskatchewan river, but with the exception of the entrance into Prince Albert the grade is practically completed.

Tofield to Calgary—This line is 202 miles long. A few steel bridges have yet to be erected but grading is almost completed. During 1912 steel was laid from mile 07 to mile 165.3, and the track will be continued to Calgary in the early spring of 1913. The line is in operation to mile 62.

Branch Lines Receive Attention

Other branch lines reported upon are the Talmage-Weyburn line, 15 miles in length, of which 39 per cent. of the grade is completed; and the Regina-Moose Jaw connection, of 49 miles, which is now completed, and its terminals at Moose Jaw in course of construction. Grading is completed on Moose Jaw-Northwest branch, but no steel has been laid. All the track on the Oban-Battleford branch was laid during 1912, and the line, 48.5 miles in length, is now completed. The Cut Knife branch from Battleford westerly toward Wainwright is finished, so far as grading is concerned, and four miles of track are laid. Steel will be laid throughout its length in the early spring of 1913. A branch line is surveyed from Biggar to Calgary, and it is stated by the chief engineer that for the present time this line is only being constructed as far as the Saskatchewan-Alberta boundary, a distance of 104 miles from Biggar. Grading on this portion was completed in 1912, and steel is laid to mile 37. The Alberta coal branch, which extends 56 miles southerly from Bickerdike on the main line, is graded for the whole of its present length.

UNITED WORKMEN RATES STAND

By a decision of the Divisional Court delivered in Toronto the Grand Lodge of the Ancient Order of United Workmen are restrained from increasing the assessment rates to members until after the annual meeting in March next. This decision was made upon the appeal of the Grand Lodge from the judgment of Mr. Justice Riddell on October 11 last.

The order of Mr. Justice Riddell was made when some of the older members of the order moved for an injunction to restrain the officers of the lodge from taking any proceedings towards increasing the assessment, as was decided upon at the last annual meeting on June 21, 1912, upon an amendment to the constitution introduced by Mr. W. H. Mills.

The court ruled that this amendment was not legally passed, on the ground that no notice of the proposed change in rates has been sent to the subordinate lodges, as was required by the constitution.

The Grand Lodge will pay the costs of the action in both courts.

CITIZENS SHOULD BUY LOCAL DEBENTURES

So Says Finance Committee Chairman MacLaren of Brockville, Who Knows the Market Pulse.

The town of Brockville had a surplus on hand at the end of 1912 of $246. This is noted in a comprehensive report of the town's finances compiled by Mr. W. C. MacLaren, chairman of the finance committee. ''The past year,'' he says, ''has been the worst in a great many years for the sale of municipal debentures; especially a 4½ debenture such as ours.

''In the past few years conditions were more favorable and your then finance committee were fortunate by watching and taking advantage of the market at the right moment, and in October, 1910, sold the $50,000 Light and Power 4½ per cent. debenture close to par, or at 99.52 per cent., and in May, 1911, the $13,741 local improvement 4½ per cent. debentures were sold above par, or at 101.16. This was a record sale as far as we can learn for many years.

Drug on the Market

''The situation changed, however, in 1912, and municipal 4½ per cents. were a drug on the market and could only be realized on at a price to yield 5¼ per cent. in competition with other good municipal bonds. A sale at this price would have involved a serious loss to the town, and as Brockville is particularly fortunate in its banking arrangements, we were enabled through the assistance of our bank to hold these unsold bonds for a more favorable market and avail ourselves of an extended use of an overdraft in the bank.

''The amount of unsold debentures on hand is $9,542.74, so that with the new issue a total of about $73,000 will have to be financed in the ordinary course of business in 1913.

Should Buy Local Securities

''The new council will have $73,000 of debentures to place on the market and sell. To those who give the financial signs of the times any consideration, it must be evident that the indications for the year 1913 are that the municipal debenture market will require careful watching and judgment to effect a wise and profitable disposal of such securities. Those who lend money are receiving now, and in the ordinary run of present industrial and agricultural development are likely to continue to receive, more for their money in the way of interest or income than for some time past. The demand is for greater income on even gilt-edged securities, and when we see municipal securities selling around us at a rate to yield 5, 5¼ or even 5½ per cent. on the investment, it at once suggests the competition that at such times exists in the debenture market.

Will be Market Surfeit

''No doubt other towns like ourselves, where they can afford it, have been withholding their offerings of debentures until next spring. This further suggests at that time a possible surfeit of the market and a corresponding bearing of the market in these securities. Some of them by no means so safe as the debentures of this town. There seems no reason why under the circumstances that with such unquestioned security as the bonds of our own town offer, the people of Brockville should not invest some of their savings or surplus moneys in the banks now yielding but 3 per cent., and buy Brockville debentures yielding 4½ per cent., or a clear increase of 1½ per cent. per annum on such idle moneys. It would, besides, be a less expensive way for Brockville to dispose of their debentures, and we believe this phase of municipal financing might be given some consideration by our loyal citizens between now and next spring. If we don't show our faith in our own perfectly sound securities and participate in their ownership we can hardly complain seriously if our town fathers find it laborious to induce outsiders to do so.''

MUNICIPAL BONDS AND FINANCING

Five bids were received for the Swift Current, Sask., $20,000 6 per cent. 20-year school debentures. As previously noted, the offer of Messrs. Wood, Gundy & Company, Toronto, was accepted.

Calgary will probably change the rate of interest on its bonds from 4½ to 5 per cent.

The estimated expenditure of Montreal for 1913 is $10,384,473 as against $8,185,000 for 1912.

Toronto's assessment for 1913 amounts to $423,573,549, as compared with $343,598,145 in 1912, an increase of $79,975,404. The assessor's valuation was $426,127,851, against which there were a number of appeals to the Court of Revision and the county judge, which resulted in a net reduction of $2,592,228.

UNITED STATES STEEL COMPANY IN CANADA

An unconfirmed story stating that the United States Steel Company will establish a large mill at Sandwich, Ont., has been issued in New York.

RICHELIEU MAY TAKE OVER INTERLAKE LINE.

Negotiations Are Proceeding for Absorbtion of Navigation Company—Will Eliminate Competition.

The Richelieu and Ontario Navigation Company is apparently determined to control matters in its particular sphere. Negotiations are proceeding with a view to the absorption by that company of the Canada Interlake Line. The Richelieu Company has obtained authority to increase its capital from $10,000,000 to $15,000,000, presumably with the object noted, in view. The capitalization of the Interlake is as follows:—

	Authorized.	Issued.
Common stock	$1,500,000	$1,000,000
7 per cent. cumulative preferred stock	1,500,000	1,000,000

At the end of 1911, the capitalization of the Richelieu Company was as follows:—

	Authorized.	Issued.
Common stock	$10,000,000	$5,311,875
5 per cent. debentures	2,000,000	1,313,933

Canada Interlake Line

The Canada Interlake Line, Limited, was formed some months ago to take over the prosperous business of the Canadian Interlake Line, Limited. To the line of vessels operated by that company this year are being added eight vessels, making in all fourteen. It is now the largest company in Canada engaged entirely in freight lake transportation. All he vessels are modern and of steel construction.

The actual earnings from operation of nine vessels for the eason 1912, up to November 30th, were $211,270, although wo of the vessels were not available until July. The estimated earnings from the end of November to the close of navigation will bring the total earnings of the nine vessels to $225,270 or 1912. The net earnings of the fourteen vessels of the fleet or 1913 have been estimated by Mr. Norcross, the managing director, at $348,000. Deducting from this amount, interest and sinking fund on bonds of $113,750, there is left a balance of $234,250, which represents 23.4 per cent. on the preference apital, or over three times the dividend thereon. After providing the dividend on the preference capital and the special eserve of 3 per cent., there is a surplus of $134,250, or over 3 per cent. on the common stock. This is after payment of 67,000 out of profits for the sinking fund, which is actually aying off liabilities and is not really a charge upon profits.

Controlled by Richelieu

The Richelieu and Ontario Navigation Company now conrols the following lake steamship lines:—Niagara Navigation Company, Northern Navigation Company of Ontario, Inland Lines, Turbine Steamship Company, Thousand Island Steamship Company, and the St. Lawrence River Steamboat Company.

The absorption by the Richelieu of the Canada Interlake places under one control an important branch of the shipping ndustry. A clear route is established across the Great Lakes o Montreal, and cargoes will be transhipped to the Furness teamers and carried across the Atlantic to Liverpool, Manhester and Hull.

Commenting on Richelieu matters, the London Financial Times, in its issue of December 6th, says:—

"We understand, on what appears to be good authority, hat an offer of $125 for each $100 of common stock of the Richelieu and Ontario Navigation Company is about to be made on behalf of Furness, Withy and Company. It may be ecalled that, earlier this year, there were many rumors curent to the effect that the English company was anxious to acuire a controlling interest in the shipping business of the Candian lakes, and that for this purpose a sufficient amount of the ommon stock of the Richelieu and Ontario Navigation Comany would be bought in the market. While the rumor was enerally believed to be pretty near the truth, there was no fficial confirmation of it, and gradually the matter was forotten. There is little doubt, however, that at the time this tatement was current, Messrs. Furness, Withy and Company were active buyers of the issue, and that they acquired $1,00,000 out of $3,132,000 outstanding. Dividends at the rate f 8 per cent. per annum are being paid on this total, so that he suggested transaction seems to be a fair one from the point f view of all concerned. If the deal be consummated it will in no wise affect the position of the bondholders of the Richelieu nd Ontario Company, many of whom are resident in this counry, beyond the fact that the concern is likely to become still more prosperous under the energetic and capable administration of the Furness interests.

Will Build in Furness Yards

"The matter has aroused considerable interest in Montreal, where the scheme is regarded favorably. The benefits to the Furness, Withy fleet of direct co-operation with one of the leading lines operating on the Canadian lakes would be very reat, for the result would be to do away with a great deal f the competition which at present exists in those waters, and would give the English concern a free hand instead of the very estricted sphere of action which at present is all that it enjoys. The value of the shipping business on the Canadian lakes is growing every year, and many of the vessels trading in those waters might easily be mistaken for ocean liners. There is little doubt that this tendency towards large steamers will increase hereafter, and doubtless a good deal of any fresh construction work which may be required will go to the Furness, Withy yards."

HOW RECENT ISSUES FARED IN LONDON

Land Schemes Went Poorly—Heavy Borrowings to Come—Canadian Northern Equipment Bonds Sold in United States

All of the £50,000 issue of 6 per cent. cumulative preference shares of the Manchester Canadian Investments, Limited, was subscribed privately. This company has been formed "to take advantage of the many opportunities existing for the profitable investment of money in the Dominion." Mr. C. C. Chipman, for twenty years with the Hudson Bay Company, is one of the managing directors.

Of the issue of £150,000 shares of £1 made in London at par by the Southern Ontario Land Company, sixty per cent. was left with the underwriters. The company will purchase about 5,200 acres of freehold land, with improvements, near Wheatley and Leamington, Ontario, "with a view to development and subsequent re-sale at a profit in the form of ready made farms." Mr. A. E. Mathews, of Toronto, is one of the directors, as also are residents of Chatham, Tilbury and Stratford, Ontario, and three Englishmen.

Another Land Issue

Another recent land issue was £80,000 6 per cent. 1st mortgage debenture stock at 98 of the Anglo-Canadian Lands, Limited. Owing to that issue having been brought out when the hostilities began in the Balkans, the underwriters had to take up 90 per cent. of the amount underwritten by them. On December 17th, the stock changed at the issue price, viz., 98, and all underwriters who were anxious to be clear disposed of their holdings at around that figure.

Of the £1,000,000 4 per cent. ten year debentures of Alberta province at 97, 70 per cent. was left with the underwriters, who also took 40 per cent. of the city of New Westminster's issue of £256,300 4½ per cent. bonds at 96.

Of the £128,100 issue of 4½ per cent. debentures at 92, 75 per cent. was left with the underwriters.

The city of Moose Jaw's flotation of £257,600 5 per cent. debentures at 98 was oversubscribed.

The Grand Trunk Railway's issue of £1,000,000 4 per cent. perpetual consolidated debenture stock was fairly well patronized.

A complete tabulation of the Canadian flotations in London last year and a survey of the situation on that market will appear in the annual number of The Monetary Times next week.

Situation in London

A London cable message special to the New York American says:

The year-end money squeeze is about over. Rates were weaker in Lombard street on the eve of the holiday but many are growing uneasy about the new year demands.

It is estimated that war loans and other government borrowing in the near future may amount to $450,000,000 or $500,000,000.

If this should prove true, the outlook is bad for gilt-edged securities. Large industrial issues are also impending. Companies, however, will have to offer tempting rates, and, while trade booms, they can afford to do it.

Diplomatic Negotiations

The prospect of what may happen when a trade reaction comes is disquieting. An enormous amount of capital will have to be taken care of. The closing of the Thames iron works and shipbuilding yards, employing 700 or 800 men, was a heavy blow to the East End.

These works are of historical interest, and hold a record for warships. The Warrior, the first armor-clad in the British navy, was built there. The Thunderer, a super-dreadnought, was completed there in twenty-four months.

A more cheerful feeling prevails over the trend of diplomatic negotiations, especially the agreement reached in the Albanian controversy.

Sold in United States

Messrs. William A. Read and Company, of New York, and the Dominion Securities Corporation have sold privately $2,000,000 series E-1 first mortgage 4½ per cent. equipment trust bonds of the Canadian Northern Railway, dated September 1, 1912, due serially to 1922. Early last year series C and D, amounting to $5,000,000, were placed by the same bankers.

According to the Winnipeg fire department report issued by Fire Chief Buchanan during the past two weeks, only 34 calls had been answered. Twenty only turned out to be actual fires, the remainder being still alarms.

DECEMBER FIRE LOSSES

Many Fires Cause Much Destruction of Property and Life

The Monetary Times' estimate of Canada's fire loss during December amounted to $1,769,905, compared with November loss of $1,184,010 and $2,866,950 for the corresponding period of last year. The following is the estimate of December losses:—

Fires exceeding $10,000	$1,300,210
Small fires	239,838
Estimates for unreported fires	230,857
	$1,769,905

The following are the monthly totals of the losses by fire compared with 1909, 1910 and 1911:—

	1909.	1910.	1911.	1912.
January	$1,500,000	$1,275,240	$2,250,550	$3,002,650
February	1,263,005	750,625	941,045	1,640,153
March	851,690	1,076,253	852,380	2,261,414
April	720,650	1,717,237	1,317,900	1,355,055
May	3,358,276	2,735,530	2,564,500	2,251,815
June	1,360,275	1,500,000	1,151,150	4,229,412
July	1,075,600	6,386,674	5,384,300	1,741,371
August	2,582,915	1,667,270	920,000	1,164,760
September	1,015,405	894,125	1,123,550	883,949
October	2,208,715	2,195,781	580,750	1,416,218
November	935,191	1,943,708	1,506,500	1,184,010
December	1,433,813	1,444,860	2,866,950	1,769,905
	$18,905,538	$23,593,315	$21,459,575	$22,900,712

Large Fires.

The fires at which loss was estimated at $10,000 and over were as follows:—

Carp, Ont.	Store	$25,000
Medicine Hat, Alta.	Business block	70,000
Sturgeon Falls, Ont.	Hotel	10,000
Frankford, Ont.	Apple storage	12,000
Cobalt, Ont.	Surface mine plant	13,000
Hespeler, Ont.	Machinery plant	20,000
Callander, Ont.	Business section	20,500
Quebec, Que.	Coal shed	20,000
Winnipeg, Man.	Furniture warehouse	68,000
Yarmouth, N.S.	Conflagration	75,000
Aldershot, Ont.	School	10,000
Uxbridge, Ont.	Tannery	75,000
Stratford, Ont.	Mill building plant	75,000
Chicoutimi, Que.	Factory	18,000
Prince Rupert, B.C.	Hotel	50,000
Watson, Sask.	Business section	12,000
Sedley, Sask.	Business section	30,000
Sackville, N.B.	Business block	27,000
Porcupine, Ont.	Business section	20,000
Toronto, Ont.	Art Metropole	61,710
Toronto, Ont.	Factory	20,000
Vancouver, B.C.	Motor boat factory	17,000
Vancouver, B.C.	Country club	30,000
Cobalt, Ont.	Powder factory	10,000
Quebec, Que.	Newspaper office	15,000
Sussex, N.B.	Business block	12,000
Quebec, Que.	Residence, etc.	16,000
Delhi, Ont.	Two business blocks	60,000
Montreal, Que.	Residence	50,000
Montreal, Que.	Sash and door factory	60,000
Calgary, Alta.	Garage	30,000
Dauphin, Man.	Business block	75,000
Moncton, N.B.	Store	10,000
Montreal, Que.	Paint works	100,000
Montreal, Que.	Spice works	16,000
Ottawa, Ont.	Store	17,000
Winnipeg, Man.	Oil warehouse	50,000

The structures damaged and destroyed were 122 residences, 37 stores, 25 barns and stables, 17 hotels, 13 business blocks, 12 factories, 6 offices, 5 warehouses, 4 educational institutions, 4 work shops, 2 newspaper offices, 3 boat houses, 3 garages, 5 planing and saw mills, 3 mine plants, 3 coal sheds, 3 restaurants, 2 post offices, 2 halls, 2 evaporators, 1 each lime kiln, tannery, conservatory, assay office, pavilion, railway station, round house, slaughter house, hospital, cooperage, bank, club, foundry, powder factory, woolen mill, bakery, laundry power house.

There were destroyed 14 horses, 14 cows, 5 pigs, 2 calves, 205 chickens, 16,000 bushels apples, car load lemons, 4,500 bushels wheat, 800 bushels oats, 75 tons hay, 9 stacks oat sheaves, 5 tons coal, 12 freight cars, 4 motor boats, 3 automobiles, 2 sets harness, 1 cutter, 1 root pulper, 1 sleigh, 1 wagon, 1 threshing machine, 1 aeroplane.

Of the presumed causes 25 were attributed defective chimneys, stovepipes and flues, 12 overheated flues and pipes, 10 defective stoves and furnaces, 10 sparks, 10 electrical defects, 10 lamps and lanterns, 9 incendiary, 8 hot ashes, 5 spontaneous combustion, 4 burning paper, 4 gas jets, 3 matches, 3 defective grates, 2 grease, 2 boiler explosion, 2 engine back firing, 1 hot lime, 1 oil stove, 1 oil heater, 1 acetylene generator explosion, 1 picker, 1 upset stove, 1 thawing water pipes, 1 candle, 1 burning rubbish, 1 gasoline.

The number of deaths from fire is 28, making 203 for 1912.

The following are the monthly totals compared with 1909, 1910 and 1911:—

	1909.	1910.	1911.	1912.
January	16	27	27	27
February	8	15	12	11
March	16	20	18	24
April	18	37	20	15
May	21	15	28	18
June	16	52	13	6
July	4	15	110	9
August	17	11	22	16
September	10	10	13	6
October	26	16	17	21
November	34	19	20	22
December	33	19	17	28
Totals	219	256	317	203

The fires at which fatalities occurred were as follows:—

Hornell, Ont.	Playing with matches	1
Dawson, B.C.	Burning building	1
Kenora, Ont.	Burning building	1
Hawkesbury, Ont.	Burning building	2
Sackville, N.B.	Set clothing alight	1
Montreal, Que.	Thrown from fire wagon	1
Toronto, Ont.	Lamp explosion	1
St. Catharines, Ont.	Set clothing alight	1
Vernon, Ont.	Set clothing alight	1
Thornton Corners, Ont.	Oil stove exploded	1
Antlers, Sask.	Burning building	1
Edmonton, Alta.	Burning building	1
Kerrobert, Sask.	Set clothing alight	1
Niagara Falls, Ont.	Railway collision	2
Edmonton, Alta.	Set clothing alight	1
Furham, Ont.	Fell into sugar kettle	1
St. Albert, Alta.	Lamp explosion	1
Toronto, Ont.	Burning building	5
Winnipeg, Man.	Gasoline stove explosion	1
Edwards Station, Ont.	Burning building	3
Charlesbourg, Que.	Burning building	2
Windsor, N.S.	Set clothing alight	1

AUSTRALIA'S NEW INSURANCE BILL

With the provision that all insurance companies in Australia must secure a license from the Australian government to carry on business in the Commonwealth, or pay a penalty of $10,000, the insurance bill was introduced into the House of Representatives by the attorney-general, Hon. William Hughes.

A further provision of the measure is that all existing insurance companies in the Commonwealth must within six months of the bill becoming law deposit with the federal treasurer money or securities in the following amounts: Life companies must hand over $100,000, and other companies $100,000, while insurance institutions carrying on a general business must deposit $200,000.

These conditions are somewhat softened in respect to new companies starting business, and although they have eventually to hand over the same amounts as the established concerns, they are allowed to deposit smaller sums at the start and make additional yearly payments, investable in government securities, the income of which will go to the depositing company.

The existing insurance law will be amended and the bil will not be passed until after the election in April.

The measure has caused some consternation in insurance circles and the companies are preparing to inaugurate a strong campaign against the government at the election when it is considered that the labor administration, if no defeated, will come back with a reduced majority. The bil will hit several American companies which are carrying on business at present in the Commonwealth.

* * *

The proposal has been placed before a committee of the Edmonton city council by Alderman East that a municipa bank upon the New Zealand plan be undertaken by the city.

FISHERIES OF CANADA

Dominion Has Most Extensive Fisheries in the World —Commercial Food Fishes in Great Variety

Canada possesses the most extensive fisheries in the vorld. The waters in and around the Dominion contain the rincipal commercial food fishes in greater abundance than he waters of any other part of the world. The fertility of Canadian waters is shown by the fact that apart from salmon, ll the lobsters, herring, mackerel and sardines, nearly all he haddock, and many of the cod, hake, and pollock landed n Canada are taken from within our territorial waters. The oast line of the Atlantic provinces, from the Bay of Fundy to he Straits of Belle Isle, without taking into account the esser bays and indentations, measures over 5,000 miles; and long this great stretch are to be found innumerable natural arbors and coves, in many of which valuable fish are taken n considerable quantities with little effort.

On the Pacific coast, the province of British Columbia, wing to its immense number of islands, bays and fiords, vhich form safe and easily accessible harbors, has a seavashed shore of 7,000 miles. Along this shore and within he limits of the territorial waters, there are fish and mammals in greater abundance, probably, than anywhere else in he whole world.

akes Stocked With Fish.

In addition to this salt-water fishing area, we have in our umerous lakes no less than 220,000 square miles of fresh vater, abundantly stocked with many species of excellent food shes. In this connection, it may be pointed out that the area f the distinctly Canadian waters of what are known as the Great Lakes—Superior, Huron, Erie and Ontario—forms only ne-fifth part of the total area of the larger fresh-water lakes f Canada.

The fisheries of the Atlantic coast may be divided into wo distinct classes: the deep-sea, and the inshore or coastal sheries. The deep-sea fishery is pursued in vessels of from o to 100 tons, carrying crews of from 12 to 20 men. The shing grounds worked on are the several banks, which lie rom 20 to 90 miles of the Canadian coast. The style of shing is that of "trawling" by hook and line. The bait used s chiefly herring, squid and capelin; and the fish taken are rincipally cod, haddock, hake, pollock and halibut.

Men and Boats Employed.

The inshore or costal fishery is carried on in small boats vith crews of from two to three men; also in a class of small essels with crews of from four to seven men. The means of apture employed by boat fishermen are gill-nets, hooks and nes, both hand-line and trawl; and from the shore are operted trap-nets, haul-seines and weirs. The commercial food shes taken inshore are the cod, hake, haddock, pollock, haliut, herring, mackerel, alewife, shad, smelt, flounder and ardine. The most extensive lobster fishery known is carried n along the whole of the eastern shore of Canada, whilst exellent oyster beds exist in many parts of the Gulf of St. Lawrence; notably on the north coast of Prince Edward sland, and in the Northumberland Straits.

The salmon fishery is the predominant one on the Pacific oast; but an extensive halibut fishery is carried on in the orthern waters of British Columbia, in large, well-equipped teamers and vessels. The method of capture is by trawlning, dories being used for setting and hauling the lines, as n the Atlantic deep-sea fishery.

Herring are in very great abundance on the Pacific coast, nd provide a plentiful supply of bait for the halibut fishery.

In the inland lake fisheries, the various means of capture n use are gill-nets, pound-nets, seines, and hook-and-line to great extent. The principal commercial fishes caught are vhitefish, trout, pickerel, pike, sturgeon and fresh-water erring—the latter in the Great Lakes of Ontario only.

Value of the Fisheries.

The total marketed value of all kinds of fish, fish proucts and marine animals taken by Canadian fishermen in oth the sea and inland fisheries, during the year ended March 31st, 1912, amounted to $34,667,872.

Never before has the total value of the fisheries of Canda passed, or even reached, the thirty million dollar mark. The value for 1911 reached $29,965,433, which, up to that time, vas the highest ever recorded; thus the total for the year nder review surpasses that high mark with an extraordinary dvance of $4,702,439.

To the total sea fisheries contributed $30,842,875, and the nland fisheries $3,824,997.

These results were produced by 65,926 fishermen, who nanned 1,648 vessels and tugs and 36,761 boats; together with 5,206 workers who were employed on shore in the various anneries, fish-houses, etc., preparing the fish for market. It vill thus be seen that the number of people directly employed n this great industry is little short of 100,000.

Of the boats, no fewer than 5,580 used gasoline engines as a means of propulsion, there being 992 added to the motor boat fleet since the preceding year.

The following table shows the value produced from the fisheries of each province in its respective order of rank, with the increase or decrease as compared with the year 1910-11.

Provinces.	Value Produced.	Increase.	Decrease.
British Columbia	$13,677,125	$4,513,890	....
Nova Scotia	9,367,550	....	$751,693
New Brunswick	4,886,157	752,013	....
Ontario	2,205,436	179,315	....
Quebec	1,868,136	175,661	....
Prince Edward Island	1,196,396	42,688	....
Manitoba	1,113,486	....	189,293
Saskatchewan	139,436	....	33,467
Yukon	111,825	....	6,540
Alberta	102,325	19,865	....
Totals	$34,667,872	$5,683,432	$980,993
Net increase		$4,702,439	....

The chief credit for the large increase is due to British Columbia. Nothwithstanding the fact that Nova Scotia's total shows a decline from that of the previous year, the total value of the fisheries of the province for the year under review is ahead of that for any of the other past years. The substantial increase contributed by New Brunswick is due to the successful sardine fishing season of 1911. The fisheries of Quebec and Prince Edward Island share in the general advance in value.

Total	$723,204,861	$900,947,005	$840,263,566	+16.1

NIAGARA FALLS POWER COMPANY NEW STOCK ISSUE

May be Made Shortly—Corporation Has a Canadian Subsidiary

The Monetary Times understands that the Niagara Falls Power Company, which controls the Canadian Niagara Power Company, may in the near future issue $3,000,000 of new stock. This stock is being offered at 180 and the new issue will probably be made at a price much under that figure. The company is paying dividends of 8 per cent. per annum and this has been regularly disbursed since April, 1910.

The company was incorporated on March 31, 1886, in New York, as the Niagara River Hydraulic Tunnel, Power and Sewer Company, and this name was changed to the present title on November 11, 1889. As a riparian owner of uplands with a frontage on the Niagara River of upwards of two miles, and under its charter as amended by special act of legislature, the company has authority to use the water of Niagara river, and to transmit any power, heat or light developed from such water to points in New York state.

Has a Canadian Subsidiary

Hydraulic and electric power is supplied to tenants of the company on its lands in Niagara Falls, and electric power is delivered to distributing companies in Buffalo and Tonawanda. A plant on the Canadian side of the river has been constructed by the Canadian Niagara Power Company (a subsidiary company) in Queen Victoria Niagara Falls Park. Of the combined output of these plants, about 137,000 electric horse power and 8,000 horse power leasehold hydraulic rights are yielding revenue.

The plants of the Niagara Falls Power Company and the Canadian Niagara Power Company are electrically interconnected, and each owns and operates electric power transmission lines to Buffalo, supplying the distributing system of the Cataract Power and Conduit Company.

The Niagara Falls Power Company owns $497,500 of the $500,000 stock of the Canadian Niagara Power Company; $1,005,000 of the $2,000,000 stock of the Cataract Power and Conduit Company; all of the $250,000 Tonawanda Power Company stock outstanding, all the outstanding $294,500 capital stock of the Niagara Junction Railway Company, and entire issue ($1,171,200) of the outstanding capital stock of the Niagara Development Company, owning an industrial village at Niagara Falls.

Capital Stock and Bonds

The authorized capital of the Niagara Falls Power Company is $10,500,000, of which $5,757,700 is outstanding. On December 31, 1911, the company's bonded debt totalled $18,275,000.

Of the $20,000,000 authorized bonds, $1,536,000 were reserved to refund the Canadian collateral debentures called for redemption November 1, 1911. The remaining bonds are reserved expressly for the construction or acquisition of additions, improvements and betterments to or for use in connection with the respective plants of this or the Canadian company, all of which are to become subject either to the lien of the mortgage or to those of the mortgage indentures securing the Canadian bonds pledged as collateral. On December 31, 1911, there were left unpresented $49,000 Canadian collateral debentures, for which cash in the same amount was set aside.

The officers and directors of the company are as follows: President, E. A. Wickes, New York; vice-president and general manager, P. P. Barton; secretary, F. L. Lovelace, Niagara Falls, N.Y.; treasurer and assistant secretary, W. Paxton Little, New York; executive committee, Messrs. E. D. Adams, F. Lynde Statson, F. W. Whitridge, J. J. Astor, E. A. Wickes, V. Morawetz and O. Mills; directors, Messrs. E. D. Adams, J. J. Astor, T. Bowdoin, C. D. Dickery, O. Mills, V. Morawetz, R. W. Pomeroy, de Lancey Rankine, F. Lynde Stetson, E. T. Stotesbury, C. M. Smith, F. W. Whitridge and E. A. Wickes.

Canadian Niagara Power Company

The authorized capital of the Canadian Niagara Power Company, which is controlled by the Niagara Falls Power Company, is $3,000,000, of which $500,000 is outstanding. The par value of shares is $100. All but $2,500 of the stock is owned by the Niagara Falls Power Company.

The bonded debt of the Canadian Niagara Power Company is $4,980,000 gold debentures 6's, series A and B (authorized $5,000,000), due October 1, 1911, but extended to January 1, 1932. These debentures are secured by a lien on the generating plant and other property of the company, and are pledged with the Bankers' Trust Company of New York as part collateral for the Niagara Falls Power Company refunding and general gold 5's.

There are also $1,500,000 gold debenture 6's, series C, due January 1, 1932. These are secured on the generating plant and other property of the company but subject to the debentures, series A and B. These debentures are pledged with the Bankers' Trust Company of New York for the same purpose as series A and B. There are also outstanding $20,000 of the original 6 per cent. debentures which have matured but which have not been presented.

The officers and directors of the company are as follow: President, W. H. Beatty; vice-president and secretary, A. M. Grier; treasurer, W. P. Little; general manager, P. P. Barton; directors, Messrs. W. H. Beatty, W. H. Brouse, A. M. Grier, W. Nesbitt, de Lancey Rankine.

◆

SILVER MINING RESULTS IN ONTARIO

Thirty-one and Half Million Ounces Were Produced—Tendency to Complete Processes in Various Camps.

The quantity of silver produced in Ontario during 1911 was 31,507,880 fine ounces, for which the mill owners received a total of $15,953,895. This compares with an output for 1910 of 30,651,417 ounces, worth $15,481,322, being an increase in quantity of 856,463 ounces and in value of $472,573. The entire production was from the mines of Cobalt, and its subsidiary camps, South Lorrain and Gowganda, with the exception of 89 ounces recovered from the bullion of gold mines, is the findings of Mr. T. W. Gibson, deputy minister of mines, contained in the twenty-first annual report of Ontario's bureau of mines. From the time of their opening in 1904, the Cobalt mines have had a total output of almost 126 millions of ounces, worth over 64 millions of dollars.

The number of producing mines was 34, counting as one mine all the properties owned by the same company or firm.

The total production was thus distributed between Cobalt and the smaller camps:—

	Ounces.
Cobalt proper	30,105,192
South Lorrain	933,912
Gowganda	468,687
Total	31,507,791

Tonnage Shipments No Longer Index

The shipments from Cobalt for the year comprised 17,278 tons of ore, 9,393 tons of concentrates, and 3,141,976 ounces of bullion, compared with 27,485 tons of ore, 6,874 tons of concentrates, and 980,633 ounces of bullion, in 1910. The tonnage shipments, however, have ceased to be an index to the activity or production of the mines, since concentration of low-grade ores and the adoption of refining processes on the spot have become marked features in camp practice. The result of these is to lessen the gross weight of the material requiring to be shipped away.

The natural evolution of the industry at Cobalt, as the high-grade ores tend to diminish in quantity or at any rate in proportion to the whole output, is bringing the low-grade material year by year into a position of greater importance. There are still shipments made of the leaner ores, and such will doubtless continue to be made during the life of the camp, but they are due to special circumstances in the mines from which they come, such as the absence of a concentration plant, or to the offer of a remunerative price by smelters looking for silicious ores to mix with more basic material.

Increases in Treatment Plants

It is inevitable that economic causes will year by year diminish the proportion of ore shipped away, and increase the proportion of concentrates and refined bullion. The fourteen concentration plants which were at work in 1910 increased to seventeen by the end of 1911, and two others, at the Beaver and Nipissing mines respectively, were in course of construction on 31st December. A further illustration of the tendency to carry treatment processes to the farthest possible point within the limits of the camp itself was provided by the management of the Nipissing mine, where a mill was installed last year for the treatment of the high-grade ores of that mine. After fine grinding the ore is subjected to an ingenious combination of cyaniding and amalgamation, which has proven both efficient and economical.

Average Percentage of Silver

The concentrating plants at the end of 1911 had a total capacity of about 1,730 tons of ore per day. During the year the quantity of ore subjected to concentration was 387,782 tons, which produced 9,443 tons of concentrates. Shipments amounted to 9,393 tons. The bulk of the ore was treated in the works of the mines from which it was raised, but a considerable tonnage was manipulated at the custom plants of the Northern Concentrators, Nova Scotia, and Nipissing Reduction Companies. Dividing the quantity of silver recovered by the number of tons of ore put through the concentrators would give 21.6 ounces of silver recovered per ton of ore. On the assumption that the average recovery was about 85 per cent., it would seem that the average contents of the ore, as it was sent to the mills, was about 25.4 ounces per ton.

GUARANTEE AND STERLING LIFE COMPANIES MAY MERGE.

Negotiations Are Proceeding for the Combination of Two New Concerns.

The Guarantee Life Insurance Company, promoted by Mr. J. O. McCarthy, of Toronto, and the Sterling Life Assurance Company, in which Mr. J. W. Garvin is interested, will probably combine their interests in the near future. Mr. McCarthy's decision to remain in municipal politics prevents him from giving as much time as he would like to the new company, and the proposed amalgamation will help to solve that difficulty.

The Guarantee Life Assurance Company recently obtained a Dominion charter. It has capital stock of $500,000 and head office in Toronto. The provisional directors were Messrs. J. O. McCarthy, J. McLenaghen, W. B. Unsworth, W. C. Gall, and G. F. Scott, all of Toronto. Although the company has full power to engage in a general life insurance business, it was the original intention of the promoters to issue only non-participating policies. If the amalgamation is effected this decision will likely be changed and a general business transacted.

Subscriptions to Stock

The provisional directors offered for subscription $300,000 of the capital stock of the company, and it is understood that most of this is subscribed.

A shareholder to be eligible for election as a director must hold at least twenty-five shares of the capital stock on which all calls have been paid. Mr. James McLenaghen, a provisional director, who has had several years' active connection with a leading Canadian company and with investment of funds, has subscribed for $30,000 of the capital stock. Mr. J. O. McCarthy, a provisional director, who has had nearly twenty years' connection with the business of life insurance in Canada, has subscribed for $10,000 of the capital stock. Mr. W. C. Gall, also a provisional director, who has had several years' active association with two leading Canadian companies, has subscribed for $2,500 of the capital stock.

As to the Sterling Life

Stock was being sold last year of the Sterling Life Assurance Company of Canada, which has an authorized capital of $1,000,000, in 10,000 shares of $100 each. The stock was underwritten by Messrs. J. W. Garvin and Company, whose commission is to be 7½ per cent. of the par value, payable when each application is accepted and the stock allotted. The stock was sold at a premium of 25 per cent., first calls amounting to 50 per cent. To enable subscribers to take large amounts, the payments were spread over twelve months; $12.50 per share on date of subscription, and the balance of the 50 per cent. calls in four equal instalments, one payable every three months. The first instalment was to be applied on premium only.

A circular letter to prospective shareholders stated that the capital stock was being distributed amongst the provinces of the Dominion, except 3,000 shares ($300,000) which had been reserved for the British Isles.

The following were the provisional directors of the company:—Messrs. A. E. Munn, of Orillia, Ontario, managing director the Munn Lumber Company, Limited, managing director the Canada Wood Specialty Company, Limited; W. H. Shaw, of Toronto, Ontario, principal Central Business College, Toronto, ex-chairman Board of Education, Toronto; N. R. Lindsay, president English Canadian Investments, Limited, Toronto; W. W. Hiltz, builder and contractor, Toronto, chairman management committee Board of Education, Toronto; W. H. Elliott, B.A., Ph.B., inspector of city schools, Toronto; G. B. Smith, M.D.; A. P. Poussette, B.A., B.C.L., K.C.; J. W. Garvin, B.A., vice-president Life Underwriters' Association, Toronto, 1911, ex-manager agency department of Excelsior Life, all of Toronto.

The proposed amalgamation is a commendable step. Several other new companies which have been so long in the process of organization might well emulate the example.

* * *

CANADIAN PACIFIC RAILWAY HOLDERS INCREASE.

In a report of the distribution of holdings of railroad shares compiled by the New York Journal of Commerce, Canadian Pacific is shown as having 38,145 stockholders in 1911 and 42,964 in the year just ended, an increase of 4,819 shareholders.

This is the largest increase in the list of American railway issues, the next increase being that of Union Pacific, with ,923, Southern Pacific 1,762, Pennsylvania with 1,722, Atchison 1,575, and New York Central 1,524.

In all, 247 companies, representing a par value of capital stock of eleven billions of dollars ($11,084,143,864), have reported. This stock is held by more than a million shareholders (1,056,099), making the average holdings per owner 105 shares—to be exact, 104.9.

* * *

The capital stock of the Toronto Type Foundry Company, Limited, has been increased from $300,000 to $400,000, such increase consisting of 1,000 shares of $100 each.

RAILROAD EARNINGS.

The following are the railroad earnings for the week ended December 7th:

	1911	1912	Increase or Decrease
Canadian Pacific	$2,478,000	$2,771,000	+$293,000
Grand Trunk	892,957	1,005,097	+ 113,140
Canadian Northern	461,600	567,900	+ 106,300
Temiskaming and Northern Ontario	30,011	35,123	— 5,012

The following are the railroad earnings for the week ended December 14th:

	1911	1912	Increase or Decrease
Canadian Pacific	$2,522,000	$2,825,000	+$303,000
Grand Trunk	929,821	1,052,340	+ 122,519
Canadian Northern	423,800	471,600	+ 47,800
Temiskaming and Northern Ontario	34,233	38,105	— 3,872

Gross and net earnings of the Canadian Pacific Railway for the month of November, while smaller than the record figures reported for October, still show good increases over earnings in the same month of 1911. The increase in gross amounted to $1,791,972, and in net to $270,772, the latter being a gain of about 7 per cent.

For the five months ended November 30th the increase in gross amounts to $9,395,421, and in net to $2,370,915. Gross and net for each of the five months since the beginning of the company's new fiscal year are:

	Gross.	Net.
July	$12,052,298	$4,448,176
August	12,251,715	4,717,925
September	11,579,733	4,250,303
October	13,060,397	5,060,887
November	12,362,666	4,258,139

The results for the five months compare with those of the same period last year as follows:

	1912	1911	Increase.
Gross	$61,306,912	$51,911,491	$9,395,421
Net	22,735,432	20,364,517	2,370,915

The November statement follows:

	November, 1912	July 1 to November 30, 1912
Gross earnings	$12,362,666	$61,306,912
Working expenses	8,104,527	38,571,480
Net profits	$4,258,139	$22,735,432

In November, 1901, the net profits were $3,987,366.49, and from July 1 to November 30, 1911, there was a net profit of $20,364,517.38. The gain in net profits over the same period last year is, therefore, for November, $270,772.55, and from July 1 to November 30, $2,370,915.26.

The Grand Trunk Railway's November statement, shows net profits as follows: Grand Trunk proper increase, £17,750; Canada Atlantic, £2,600; Grand Trunk western lines, increase, £7,650; Grand Haven, decrease, £1,200; a net increase for the entire system of £21,600.

With a gain of $212,600 in net earnings, the November statement of the Canadian Northern makes the most favorable exhibit of the current fiscal year.

The statement of earnings and operating expenses for the month of November follows:

	1912	1911	Increase
Gross earnings	$2,509,700	$2,001,500	$508,200
Expenses	1,631,900	1,336,300	295,600
Net earnings	877,800	665,200	212,600
Mileage in operation	4,297	3,731	566

	July 1, 1911, to Nov. 30, 1912	July 1, 1910, to Nov. 30, 1911	Increase
Gross earnings	$10,107,900	$8,503,300	$1,604,600
Expenses	7,235,900	6,062,000	1,173,900
Net earnings	2,872,000	2,441,300	430,700
Mileage in operation	4,297	3,720	577

		July 1st to date.
For week ending December 21, 1912	$477,200	$11,624,600
Corresponding period last year	439,500	9,828,200
Increase	$37,700	$1,796,400

* * *

The Canadian Pacific Railway have ordered two new ships for their Montreal service from Messrs. Barclay, Curle and Company, of Glasgow. The new steamers are being designed to meet the special requirements of this trade. They will each have accommodation for 1,250 third-class passengers, and will carry only two classes, second and third. In the former the carrying capacity will be for 530 people. With a tonnage of 12,000 tons, the new boats will be able to carry 3,000 tons of cargo and to steam at from 15 to 16 knots an hour. The ships will burn coal at first, but provision is to be made for oil fuel eventually.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Duluth Superior Traction Company.—The third week in December Duluth-Superior Traction Company gross earnings were $22,481, an increase of $950 over those of the same week a year ago.

Marconi Wireless Telegraph Company of Canada.—An agreement has been signed by the Marconi Company, with the Newfoundland Government, under which the Canadian Company is granted exclusive rights for wireless telegraph stations until the year 1926.

A number of coast stations are to be erected forthwith, in connection with which they are to receive a Government subsidy.

Porto Rico Railways Company, Limited.—The Porto Rico Railways Company, Limited, comparative statement of earnings for November, 1912:—

	1911.	1912.	Inc.
Gross	$ 64,198.38	$ 70,477.87	$ 6,279.49
Net	31,293.92	31,990.79	696.87
For 11 months:—			
Gross	680,611.57	755,637.10	75,025.53
Net	343,553.91	299,328.32	*44,225.59

*Decrease.

Dominion Canners, Limited.—The directors of the Dominion Canners, Limited, held a meeting at the head office recently. The only question considered was that of dividends. A dividend has not been paid on the common stock for several years, but as the result of a very satisfactory year's business, the directors decided to declare a dividend of 6 per cent. on the company's stock for the whole year of 1912, and it will be payable on February 1st, 1913. It was also decided as a matter of policy that the dividend should be continued at the rate, payable quarterly.

Brazilian Traction Light and Power Company.—Net earnings of the Brazilian Traction, Light and Power Company for November are $1,006,271, compared with $806,264 net earnings of the Rio and Sao Paulo companies for November, 1911, an increase of $200,007. In both gross and net earnings the November statement shows slight increases over October. For the three months from September, net earnings have averaged nearly one million a month.

Following is the comparative statement for November:—

	Nov., '12.	Nov., '11.	Inc.
Gross earnings	$1,773,623	$1,460,358	$313,265
Operating expenses	767,352	654,092	113,258
Net earnings	1,006,271	806,264	200,007

Aggregate gross earnings from September 1 to November 30 are $5,235,108, and aggregate net earnings $2,964,501.

Toledo Railways and Light Company.—The re-organization committee of Toledo Railways and Light Company announces that more than 75 per cent. of outstanding stock has assented to the re-organization plan and that holders of more than 60 per cent. of outstanding stock have paid their assessment of $7.50 a share. The committee has extended the time for the deposit of stock with the New York Trust Company under the re-organization plan to January 4th, 1913. It is understood that more than 85 per cent. of the 4 per cent. collateral trust bonds have also assented and it is felt certain that at least 90 per cent. of outstanding bonds will be in hands of committee by to-day. Deposits of more than 75 per cent. of the stock makes certain the carrying out of re-organization plans.

Rea Consolidated Mines.—The directors of Rea Consolidated Mines of Porcupine have entered into a five-year lease of their property to Mr. John Reddington, formerly superintendent of the Coniagas Mines of Cobalt, and more recently in charge of the Swastika. The consideration precedent, is the payment by Mr. Reddington of $6,000 to the Rea, with which the latter has paid off its indebtedness. Mr. Reddington undertakes to work the property, to erect a mill with a daily capacity of 25 tons, and to pay the Rea 25 per cent. of the net proceeds. Rea shareholders have not much to expect from the arrangement, but it is the only solution possible in the circumstances. The five year period and the right of renewal the lease confers upon Mr. Reddington, do not create a speculative position in Rea shares. If Rea holders wish to participate in the new company, to be promoted by Mr. Reddington, they can do so to the extent of almost half the capital of the concern, which is to be $200,000.

Consolidated Mining and Smelting Company of Canada, Limited.—The Consolidated Mining and Smelting Company of Canada, Limited, ore receipts at Trail smelter for week ending December 19, and from July 1 to date, in tons were as follows:—

Company's mines.	Week ending Dec. 19.	July 1 to date.
Centre Star	3,410	77,288
Le Roi	575	20,661
Sullivan	464	14,247
Richmond-Eureka	27	686
Molly Gibson	.....	1,101
St. Eugene	.....	710
No. 1	.....	153
Other mines	3,064	35,444
Total	7,540	150,290

Kaministiquia Power Company.—The company's statement for the year ended October 31st shows net earnings at the rate of 6.5 per cent. on the capital stock; there is an increase of $27,145 in gross revenue with but a small increase of $2,514 in operating expenses. The increase in fixed charges is $3,226, so that the net income is increased by the difference.

The amount transferred to surplus is $14,796, or less than half of the amount carried forward last year, which is accounted for by a much larger amount having been transferred to contingent account. Dividends for the year were at the rate of 4 per cent. against 3 per cent. in 1911.

The profit and loss statement is as follows:—

		1912.	Increase.
Gross revenue		$243,886.61	$27,145
Operating expense renewals		31,688.72	27,145
Operating expense renewals		31,688.72	2,514
Net revenue		$212,107.89	$24,631
Fixed charges		82,401.87	3,226
Net income		$129,790.02	$21,406
From which deduct:—			
Dividends paid		80,000.00	20,000
Surplus		$ 49,796.02	$ 1,400
Appropriated to contingent account $25,000.00. Depreciation and renewal Reserve	10,000.00	35,000.00	16,660
Transferred to surplus account		$ 14,796.02*	15,254

*Decrease.

The weekly statement of the Bank of England shows the following changes:—Total reserve, increased £1,044,000; circulation decreased £72,000; bullion increased £971,920; other securities increased £12,848,000; other deposits increased £13,896,000; public deposits increased £1,729,000; notes reserve increased £1,155,000; government securities increased £1,801,000. The proportion of the bank's reserve to liability this week is 30.65 per cent. Last week it was 37.85 per cent.

The new firm of Smart-Woods, Limited, which has absorbed the firms of The Smart Bag Company, Limited, and Woods, Limited, commenced business this week. The new company has acquired a controlling interest in the Empire Cotton Mills, Limited, of Welland, Ontario, and also in the Renfrew Knitting Company, of Renfrew, Ontario; and practically the entire output of both these concerns will be taken by Smart-Woods, Limited. As soon as the necessary formalities can be complied with, the securities of Smart-Woods, Limited, will be listed on the Montreal Stock Exchange.

The membership of the Montreal Stock Exchange was increased last year from 60 to 65 members. Six seats were sold during the year, all at $30,000, or just equal to the record price established the previous year. One of the six new seats is held in trust. In all, fourteen new members were elected, the month of their election and their names being as follows: February—Russell Cowans, Woodward Marier, J. G. Greenshields. March—K. R. Schofield. May—C. J. Hodgson, S. A. Heward and J. H. Redpath. June—Hugh G. Davidson and L. M. Wood. December—J. Stuart McCuaig, Alan C. Dunlop, Chester W. Root and F. Chattan Stephens.

HOW CANADA'S CITIES SHARE INDUSTRIAL LIFE

Montreal Leads the Dominion and Toronto is Its Nearest Rival—Some Interesting Statistics

BY DR. ARCHIBALD BLUE.

The products of manufactures in the chief towns and ities of Canada and their rates per cent. of increase by eriods of years and for twenty years are shown in the fol- wing table, viz. :—

Altogether there are 44 cities with a population of 10,000 d over, but four are grouped with smaller towns lying ad- cent because the places are industrial units, viz.: Berlin th Waterloo, Windsor with Walkerville, and Sault Ste. arie with Steelton, in Ontario, and Winnipeg with St. Boni- ce in Manitoba.*

Montreal still holds the lead of all cities of the Dominion, values of products having grown from $71,099,750 in oo, to $166,296,972 in 1910, or 133.89 per cent. Toronto, nearest rival, gained in the same period from $58,415,498 $154,306,948, or 164.15 per cent. In the twenty years ntreal's gain was 145.81 per cent. and Toronto's gain 243.18 cent. The third place is held by Hamilton with $55,125,- , being an increase of 221.95 per cent. in the last decade d 292.51 per cent. in twenty years. The highest per cent. gain in twenty years has been made by Sault Ste. Marie d Steelton with 7,194.56 per cent., followed by Calgary h 2,893.86 per cent., Sydney with 2,698.26 per cent., ndsor and Walkerville with 1,171.03 per cent., and Van- ver with 695.16 per cent.

lues of Total Products.

The values of total products of factories in Canada em- ying five hands and over in the year 1890 was $368,696,723, 1900 $481,053,375 and in 1910 $1,165,975,639, being an in- ase in the first decade of 30.47 per cent., in the second of .13 per cent., and in the twenty years of 216.54 per cent. e population in 1911 is given in the following table, to- her with the values of products in 1900 and 1910, and the rease per cent. in the period of ten years.

Comparative Statistics of Manufactures by Provinces in 1900 and 1910.

	Population in 1911.	Values of products in 1900.	Values of products in 1910.	Increase per cent. in 1900 to 1910.
		$	$	%
Canada	7,205,364	481,053,375	1,165,975,639	142.13
Alberta	374,663	1,313,320	18,788,826	1,323.78
British Columbia	392,480	19,447,778	65,204,235	234.95
Manitoba	455,614	12,927,439	53,673,609	315.19
New Brunswick	351,889	20,972,470	35,422,302	68.89
Nova Scotia	492,338	23,592,513	52,706,184	123.40

Prince Edward Island	93,728	2,326,708	3,136,470	34.80
Quebec	2,003,238	158,287,994	350,901,656	121.69
Saskatchewan	492,432	651,667	6,332,132	871.68

Note.—The Northwest and Yukon Territories are not included in this table. Their population is 25,708.

Increase of Capital Employed.

Capital increased in the twenty years from $331,635,499 in 1890 to $446,916,487 in 1900, and to $1,247,583,609 in 1910, and salaries and wages from $79,234,311 to $113,283,602 and to $241,008,416.

The census of Canada in 1911 for 1910 shows that for the first time we have in capital as well as in the values of products crossed the billion line. There were 231 establishments, the value of whose products in 1910 ranged from $500,000 to $1,000,000, 136 whose products were $1,000,000 to under $5,000,000, and 14 whose products were $5,000,000 and over. In the case of two of the latter the values were each more than $10,000,000.

---

*Waterloo with 4,359, $2,812,,595, Walkerville with 3,302, ,341,573, Steelton with 3,936, $6,839,550, and St. Boniface, h 7,483, $6,701,249.

◆

ESSENTIALS OF AN ANNUAL REPORT

Are Not Always in Display Type—How to Sift the Important from the Non-important

(Specially Contributed to The Monetary Times).

Insurance companies, banks and other financial institutions are occasionally tempted to do a little "window dressing" when making their annual reports. Emphasis is laid in a report upon comparatively non-important items, probably with the idea that the reader will be so impressed by them that he will neglect to read the smaller and frequently more important type.

Character of Company's Asset

Among the items to be carefully examined in a life insurance company's annual report is the character of the assets—that is, mortgages, bonds, etc., carried by the company, and the safety of the principal invested in them, also the reliability of the interest payments. Under this head comes the examination of the amount earned on head office and branch office buildings, and any probability of diminution of the book value of these buildings.

The surplus should be compared with the liabilities, taking into account the time of payment of profits to policyholders, and the blue book should be carefully studied in order to find out just how the surplus is arrived at since there is little or no statutory regulation of the use of the term "Policyholders' Net Surplus" in a company's annual report.

Small Investor Should Use Care.

As a general rule, the outstanding premiums should not be over one-half of the total premiums due.

The chance of continuance of the low net premium is important and depends largely upon the mortality rate, the expense ratio and the rate earned on investments. In regard to the interest earnings on investments, one should consider how much the rate is above the HM. tables, and the reliability of the continuance of that rate of interest earnings.

The above is sufficient to demonstrate to the small investor the importance of examining with care the published report of any institution in which he intends to invest, deposit or insure, and not to be misled in any case by an abundance of display type, but always to examine critically and carefully the essential items of the report.

◆

The world's production of gold during 1912 was $5,500,000 greater than in 1911, the total having been $465,000,000, according to a preliminary estimate announced by Mr. George E. Roberts, director of the Mint. Gold production in the United States amounted to $92,685,168, compared with $96,890,000 in 1911. Of the world's production the Transvaal and Rhodesia made a gain of about $20,000,000 and Canada gained nearly $3,000,000.

FIRE INSURANCE POLICIES.

Description Contained in Them Should be Correct and All Required Permits Should be Written.

A fire insurance policy is strictly a personal contract, a contract of indemnity is the opening sentence of an interesting booklet written by Mr. H. D. Patterson, secretary of the Security National Insurance Company of Canada and issued by that company.

It insures John Jones against loss or damage to the specified property, while it belongs to him, and is located and contained as described in the policy and not elsewhere. A policy does not follow any changes in ownership or location unless the insured lets the company know about it and obtain their written consent to the endorsement.

In discussing the features of a properly written policy, the first point to be taken up is ownership.

The name of the person, firm, company or corporation owning the property to be insured should be correctly stated in the policy. A policy should not be written in the name of "The Sunshine Grocery" if it is not an incorporated company and if the real owners are John Jones and Wm. Smith. The policy must be written in the name of John Jones and Wm. Smith, trading as "The Sunshine Grocery."

Should any change whatever take place in the ownership of the property, such as sale to other parties, placing of mortgage on the property, change in name of company, taking in of a partner or any change in partnership, the insurance company should be notified and their consent obtained to the change.

Description Should be Correct

Secondly, the agent should see that there is a correct description in the policy of the material of which the building is built, how it is roofed, number of stories high, its situation by lot, block and street, and how it is occupied. Every business carried on within the four walls of the building which the insured owns or rents should be mentioned in the policy. Should any changes take place after the policy is written, such as change in occupancy or the putting up of other buildings nearby, or should the building become vacant, or the property be removed to another location, the agent should notify the company of these changes. They should have a chance to decide whether or not it increases the hazard.

Thirdly, all property to be insured should be fully described. If the building is to be insured, it is well to mention the ground floor size of the main building and all additions.

Mention All Possible Classes of Goods

If the insurance is on stock, see that the policy mentions as many possible of the different classes of stock carried. If the insured has a loss, and wishes to be paid for some class of stock not mentioned in the policy, the adjuster may refuse to pay him for it, claiming that this class of goods is not usually carried in a store of the class he runs. For instance, suppose the proprietor of a drug store had a small stock of gramaphones and records. Unless these were specially mentioned in the policy, he could not collect for any damage done to them, as the adjuster would hold that they were not goods usually carried in a drug store.

Separate insurance should be carried on store and office furniture, fixtures and appliances such as counters, shelving, silent salesmen, desks, chairs, refrigerators, safes, cash registers, scales, wrapping paper holders, accounting registers, signs, awnings, etc. The insured could not collect for any loss to the above articles under the insurance on stock as this only covers goods carried for sale or in process of being prepared for sale.

Read the Same in Every Particular

Stock contained in a separate warehouse on the back of a lot is not covered by the insurance on stock in the main store building, and a separate insurance must be carried on it if the insured wishes to cover it against fire loss.

In the fourth place comes other concurrent insurance. If the agent wishes to save the assured endless trouble and delay in case of fire, and perhaps actual money loss, he should see that all his policies on building, stock, fixtures read the same in every particular.

Any differences in the several policies complicate the settlement of a loss, which means delay. Some times also it means financial loss; for instance, if one policy covers in or on a building 50 x 70 and addition 20 x 50, and another in or on the same building without mentioning the addition, the second company could not be called upon to share in the loss in or on the addition, atlhough that part of the building may be burned and the main building saved.

Should Contain Permission

Every policy should have in the wording permission to carry other concurrent insurance to some specified percentage of the actual cost value of the property insured. Most insurance companies are willing to give a merchant permission to carry total concurrent insurance to 75 per cent. of the actual cash value of the property insured without notice to the several companies on the risk.

If the policy does not contain this permission it is necessary (except in the province of Manitoba) to notify every company on the risk every time more insurance is added, and get their written permission, otherwise the whole insurance on the property may be void if the companies wish to take advantage of Statutory Condition No. 8. In Manitoba, if the total insurance does not exceed three-fourths of the actual cash value of the property insured where much property is in the city of Winnipeg, or two-thirds of such cash value where the property is elsewhere in Manitoba, failure to notify of changes in insurance does not void the policy.

Fifth, permits should be attached to the policy or included in the wording to cover the following:—For lighting of the premises with acetylene or gasoline devices.

For keeping in the building or on the premises either for use or sale, any gasoline, benzine, naphtha, coal oil, machine or paint oils, turpentine, or any similar liquids, fireworks or gunpowder.

For use of tinners or plumbers gasoline fire pots.

ONTARIO WORKMEN'S COMPENSATION ENQUIRY

Expert Suggests Scheme Based on Adaptation of Earlier Form of British Law—Manufacturers' and Labor's Queries

A special sitting of the Ontario commission investigating workmen's compensation was recently called for the purpose to hear Mr. Sherman, a New York expert, on the question of compensation legislation, who had been summoned by the railway companies. Evidence was shown of experience in the United States and his study of the question in Europe. He condemned the German system of compensation for workingmen, and said that to adopt it in this country would be making the welfare of the people the playfield of impulsive experiment, and would entail a radical change in political principles and in social and industrial habits and customs. Both the British and German laws, he maintained, although in different ways and to different degrees, were products of gradual development. Even if the ideal be a system of broader and more perfect insurance than that provided by the British law, yet prudence dictated a course of gradual approach. The safest and most surely beneficial first step on that course would, in his opinion, be an adaptation of the earlier form of the British law.

Liability Companies' Obligations

Touching Mr. Sherman's claim that direct liability or its equivalent would make the employer more careful, Sir William Meredith asked him, as an expert economist, whether in his view all cost went ultimately back upon the consumer. Mr. Sherman maintained that the question was adjusted by competition. The man with low operating costs could place the loss back upon the consumer, while the man with high operating costs and competition could only escape by enterprise in accident protection.

Mr. F. W. Wegenast, expert for the Canadian Manufacturers' Association, took direct issue with Mr. Sherman on many points, and accused the latter of misstatement of facts. "I make this statement fully realizing its gravity," said he, "but I doubt whether there is a liability company doing business in the Dominion of Canada that is to-day in a position to meet its obligations and has not mortgaged its future to some extent." He argued that the Washington law was preferable to that of Michigan, which Mr. Sherman had commended.

As Good Law as We Can Make

"If it be a fact that a large majority of the manufacturers of Ontario desire a law such as that suggested in the Washington report, how do you account for it?" asked Sir William of Mr. Sherman.

The latter doubted the hypothesis, but, admitting it for the purpose, stated that they must have been attracted by the idea that it was going to be cheaper and would place the cost on a future generation. "A man who has fully studied the whole subject will not be wanting it," Mr. Sherman added.

Mr. Wegenast and Mr. Fred Bancroft, the latter representing the labor interests, were accorded the privilege of filing with the commission their answers to Mr. Sherman's contentions.

"We will do that later," said Mr. Bancroft.

"Do not let it be too late or we may not have legislation this session," commented the commissioner. "I do not want to delay, though it is better to get a good law carefully thought out than a poor law hurriedly put in the statutes. The public welfare demands as good a law as we can make."

Mr. J. A. Scellen, of Berlin, directed the attention of the commissioner to a circular letter which had been sent out to manufacturers by the insurance company interests urging the case against state insurance. He presented a petition from the manufacturers of Berlin and Waterloo expressing their endorsation of a state system. Messrs. J. Harvey Hall, for the railway men, and Calvin Lawrence, for the locomotive engineers, with Engineer Charles Clark, of London, were also heard before adjournment.

CANADA'S TRADE BALANCE

How Import Figures May Prove Misleading—Capital Brought in by Settlers

Discussing Canada's trade balance in the London Financier, Mr. H. K. S. Hemming, a well known Anglo-Canadian financier says:—

"The figures found in the Canadian blue-book are more or less misleading. The important figures, being obtained from the Customs-houses, through which all imported goods must pass, are, of course, complete and correct. The export figures, on the other hand, are collected only for statistical purposes, and as no penalty has ever been imposed for neglect in sending the information to the Government, exporters are well known to have been negligent in their duty. There is little doubt but that the actual values of the exports have exceeded by many millions those enumerated in the Government returns.

Capital from Settlers.

"No serious attempt has been made by the different Governments of Canada to discover the amount of cash brought into the country by incoming settlers (now numbering some 1,200 per day). On the other hand, experienced statisticians have recently made estimates according to which the fresh capital thus brought into the country between the years 1896-1912 has exceeded the excess of imports over exports during the same period. In other words, these excess imports, which go to make up the deficit in the Canadian national balance-sheet, have in reality consisted of goods brought into the country by new settlers and paid for out of their own pockets without the assistance of Canadians or of outside financiers such as the investors of Great Britain.

"Notwithstanding the above two facts, there is another of equal importance as an explanation. Canadians have imported—during the same period of 1896 to 1912—merchandise which they have applied to purposes which might properly be termed a "national capital amount" of a value almost double the supposed excess of imports over exports. By this I mean that that portion of Canadian imports which has been used in the construction of her railways, canals, roads, drains, etc., the erection of buildings and the equipping of mines, farms and so forth, has amounted to double the excess of her imports over exports.

Invest in the Plant Account.

"Some economists will tell us that it is not safe for a country to continue to invest capital in so-called plant account, but so long as immigrants continue to pour into Canada, so long will it be her duty, and, in fact, the duty of this country, as the head of the British Empire, to provide them with houses to live in, roads for travel, railways for purposes of transportation, and the thousand and one other necessities of life and intercourse which in older countries, such as this, are scarcely even thought of, because they have been at hand for generations or even centuries.

"Canada is making solid financial history more rapidly, and with more satisfactory results than has been the good fortune of any other country in the world's past, and the wise man is not he who shakes his head in ignorant fear, but he who goes to the fountain-head for information, and then applies his knowledge to such opportunities for investment as may be placed before him."

◆

COAL PRODUCTION IN NOVA SCOTIA

"Coal production for all the companies in Nova Scotia during 1912 will show an increase of 600,000 tons over 1911," was the statement made by Mr. Alexander Dick, general sales agent of the Dominion Coal Company. The sworn returns of all the companies, he added, are made quarterly, and the fiscal year of the Nova Scotia Government ends September 30th, so that the returns for the calander year may show a little variation, but these will not be completed till shortly after the new year.

The returns of the companies are as follows:

	1912.	1911
Dominion Coal Company, Cape Breton..	4,331,320	4,011,235
Dominion Coal Company, Springhill	420,481	346,964
Nova Scotia Steel & Coal Company	821,000	777,800
Maritime Coal, Railway & Power Company	151,308	126,101
Inverness Coal & Railway Company	289,704	259,315
Acadia Coal Company	439,476	359,252
Intercolonial Coal Company	[illegible]	[illegible]
Colonial Coal Company	35,211	30,525
	6,731,907	6,123,0[illegible]

There was a considerable increase in coal consumption by the steel companies, which absorbed a good part of the increased production.

GREAT NORTH WESTERN TELEGRAPH COMPANY

Election of Directorate — Its Relations With the Western Union and Grand Trunk

The election of Z. A. Lash, K.C., as president of the Great North Western Telegraph Company, gave rise, we observe, to a story that the Canadian Northern Telegraph Company would absorb the former concern. The Monetary Times understands that this matter was not discussed, either officially or unofficially, at the meeting of the Great North Western directorate in Toronto this week. Indeed the likelihood of any such close connection with a railway would seem rather to be with the Grand Trunk. Hitherto the intimate business relations of the Great North Western, so far as railroads are concerned, has been with the Grand Trunk. The two companies have worked together amicably for more than fifty years. The Great North Western lines follow the Grand Trunk tracks in Ontario and Quebec and also in the United States. The telegraph company's lines were also installed, on the advice of the late Mr. H. P. Dwight, formerly general manager and president, in new England, Massachusetts, Michigan, Maine, Vermont, and New York states.

Controls Great North Western.

The Western Union was incorporated in New York in 1851 and has since acquired the stocks of many other telegraph companies operating in different parts of the United States. It has authorized capital stock of $100,000,000 and a bonded debt outstanding of $36,726,000.

Among the numerous companies controlled by or affiliated with the Western Union is the Dominion Telegraph Company. This was incorporated in 1868 in Canada to operate in the Dominion and nothern New York. It has been leased for 99 years from July 1, 1879, to the Western Union at a rental of dividend of 6 per cent. on the capital stock. The section of the Dominion Telegraph lines west of New Brunswick, is sub-let to the Great North Western Telegraph Company. It has capital stock of $1,000,000, of which the Western Union owns $288,300. The stock is listed on the Toronto Stock Exchange. Sir Henry Pellatt is vice-president and a director of the company, as are also several other Toronto men, including Mr. Æmilius Jarvis.

Montreal Telegraph Company.

The Western Union also guarantees the dividend of the Montreal Telegraph Company, which was incorporated in 1847. This concern is operated and maintained by the Great North Western. In turn, the operation and maintenance is guaranteed under a 97 years' agreement from July 1, 1881, by the Western Union. Mr. W. McMaster, is president of the Montreal Telegraph Company, and Mr. W. Wainwright, vice-president.

Election of Officers.

The following officers and directors were elected at the annual meeting of the Great North Western this week:—President, Z. A. Lash, K.C., LL.D., Toronto; vice-presirent, Adam Brown, Hamilton; other directors, James Hedley, Hon. Senator James K. Kerr, K.C., Æmilius Jarvis, F. B. Hayes, Toronto; J. B. Van Every, Newcomb Carlton, New York; general manager, Geo. D. Perry; secretary and auditor, A. C. McConnell; treasurer, D. E. Henry.

Little information is available regarding the expenses and earnings of the Canadian Northern Telegraph Company. On June 30th, 1911, the Canadian Northern Railway is credited with holding among its required securities $500,000 of the stock and $800,000 of the general mortgage 5 per cent. bonds, a total of $1,300,000, of its telegraph company.

◆

Montreal's retiring Harbor Commissioners amended the contract to J. C. Metcalfe for an addition to No. 1 elevator, at a cost of $700,000. The addition will increase the storage by 1,500,000 bushels.

Calgary fire insurance men held a banquet recently in the Alexandra Hotel for the purpose of getting together and discussing matters of interest in connection with their work. The toastmaster was Mr. O. E. Tisdale. Among those who spoke were Messrs. Long, Benjamin, Mottley, Middleton, Neve and Hickman. Those at the head of the table were Messrs Rex Neve, Hal Middleton, A. J. Girton, W. J. Mills, J. W. Keith, and H. H. Mottley. Among others present were Messrs. H. A. Benjamin, T. A. Hornibrook, Wilfred Chambers, W. G. Gilbert, C. M. Howell, Herbert Gillis, W. R. Hull, Reginald Long, B. T. Durrel, Arthur Turner, G. E. Sessions, Ed. Mahoney, Charles Nunemaker, W. B. Hickman, [illegible] Cleave, H. F. Ros[illegible] Harold F. Smith, H. W. Allen, George Beck and C. E. Tait. Mr. B. A. Atkinson, sr., had charge of the arrangements.

RECENT FIRES

Monetary Times' Weekly Register of Fire Losses and Insurance

Vancouver, B.C.—December 27.—66-8 Powell Street. Loss and cause unknown.

Edmonton, Alta.—December 19.—McInnes lumber yard. Loss and cause unknown.

North Battleford, Man.—December 21.—Windsor Hotel. Loss and cause unknown.

Blyth, Ont.—December 29.—Mr. W. Johnston's livery barn. Loss and cause unknown.

St. Marys, Ont.—December 26.—Collegiate Institute. Loss unknown. Cause, furnaces.

Kingston, Ont.—December 29.—Steamer "Wolfe Islander." Loss and cause unknown.

Irricana, Alta.—December 21.—Mr. F. W. Gibson's livery barn. Loss and cause unknown.

Brooks, Alta.—December 18.—Canadian Pacific Railway warehouse. Loss and cause unknown.

Estevan, Sask.—December 19.—Messrs Krivel and Robinson's stable. Loss and cause unknown.

Acme, Alta.—December 11.—McHugh's dance hall, harness shop, barn, &c. Loss $8,000. Cause unknown.

Brandon, Man.—December 22.—Brandon Hardware Block. Loss unknown. Cause, red hot stove.

Quebec, Que.—December 21.—Mr. Boyce's stable, Abraham Hill. Loss $300. Cause unknown.

Paisley, Ont.—December 21.—Mr. W. C. Davey's residence, Church Street. Loss and cause unknown.

York Mills, Ont.—December 26.—Mr. Fulton's residence, post office, &c. Loss $6,000. Cause unknown.

Merritt, B.C.—December 8.—Mr. J. Roscovitch's residence. Loss $1,100. Insured. Cause unknown.

Prince Rupert, B.C.—December 18.—Captain Barbington's gasoline launch "Sangra." Cause unknown.

Fredericton, N.B.—December 20.—Mrs. J. Bird's residence. Loss $500, partially insured. Cause unknown.

Hope, B.C.—December 10.—Three buildings between First and Second Avenues. Loss and cause unknown.

Medicine Hat, Alta.—December 24.—Freight train, 10 cars burned. Cause, collision, caboose stove set cars alight.

Victoria, B.C.—December 19.—Messrs. Scott and Sinclair plumbing store. Loss unknown. Cause, lighted paper.

Aultsville, Ont.—December 14.—Barn belonging to Beach property on West Main Street. Loss and cause unknown.

Cobalt, Ont.—December 26.—Mr. H. Augrignous' residence, Lang Street near Fasken Avenue. Loss $5. Cause unknown.

Windsor, Ont.—December 19.—New Ford garage, corner Ferry Avenue and Chatham Street. Loss slight. Cause unknown.

Glace Bay, N.S.—December 21.—Messrs. P. McKenzie and Company's rear store, Main Street. Loss slight. Cause unknown.

Winnipeg, Man.—December 30.—Imperial Oil Company's warehouse. Loss $50,000. Cause, supposed electrical defects.

Fort William, Ont.—December 25.—443 North Brodie Street. Loss slight. Cause, gasoline. Tool shed in Gresley Park. Loss and cause unknown.

Nelson, B.C.—December 11.—Mr. T. Sargent's motor boat supply house. Loss, building $300, contents $1,672, fixtures $100. Insurance, contents, Royal Insurance Company, $1,500. Cause electrical defects. Adjusted by J. S. Rankin, Vancouver.

Ottawa, Ont.—December 24.—Mr. H. W. Wilson's dry goods store. Loss, stock $14,000, building, &c., $3,000. Cause, burning paper.

December 25.—Rear Carisbrook apartments. Loss slight, insured. Cause, hot ashes.

Lynn Valley, B.C.—December 4.—Mr. F. Duval's residence. Loss, building $960, contents $875. Insurance, building, Dominion Fire Insurance Company, $1,000; stock, London Mutual, $600. Cause, over-heated stove. Adjusted by J. S. Rankin, Vancouver.

Dauphin, Man.—December 30.—The Malcolm Block. Loss $75,000. The principal losers were: T. T. Malcolm, $15,000; J. E. Wallwin, $15,000; M. J. Stewart, $20,000. Damage to the block itself will amount to $20,000, fully covered by insurance. Cause unknown.

Moncton, N.B.—December 22.—Mr. H. G. Marrs' millinery store. Loss $10,000. Messrs. Melanson and Company, jewelry, loss was covered by insurance. Miss Babineau's. Loss $1,500. Insurance, Mr. Marrs, National $2,000, Rimouski $1,000, Sun $500. Cause, supposed defective chimney.

Hamilton, Ont.—December 24.—22 Duke Street. Loss $20. Cause, defective chimney. Commercial Chambers. Loss $1,000, insured. Cause, supposed over-heated furnace. Calley and Breay's store. Loss slight. Cause unknown.

December 25.—Mrs. J. Proctor's residence, East King Street. Loss slight. Cause, chimney.

Toronto, Ont.—December 26.—Mr. H. Cook's photo gallery, 33 Queen Street West. Loss $25. Cause unknown.

December 27.—11 Kirkwood Avenue. Loss unknown. Cause, children playing with lighted paper.

December 31.—147 Nairn Avenue. Loss $300. Cause unknown.

Halifax, N.S.—December 23.—94 Victoria Road, owned by Mr. A. B. Wiswill. Loss and cause unknown.

December 26.—Mr. S. Dumaresq's residence, Oxford Street. Loss and cause unknown. Dwelling on Pleasant Street. Loss and cause unknown.

December 29.—Cumberland Railway and Coal Company's No. 2 slope at Springhill. Loss unknown. Cause, overheated revolving drum.

Calgary, Alta.—December 21.—Allen Block, 9th Avenue and First Street East. Loss slight. Cause, hot ashes. Motor Transportation Company. Loss $30,000. E. A. Williamson, owner of building, $7,500. Motor Transportation Company, loss on equipment and eight cars, $15,000. Five owners of private cars, about $7,500. The owners of the private cars are: W. A. Teskey, F. W. Flett, N. Dew, P. B. Lewis, and N. J. Gilchrist. Cause unknown.

Winnipeg, Man.—December 23.—174-6-8 Logan Avenue. Loss $3,625. M. Spiviack $3,250, Mr. Sexsmith $75, Mr. Goodman $300. Cause unknown.

December 24.—Mr. D. McRae's automobile. Loss and cause unknown. Rear 174 Lombard Street. Loss small. Cause unknown.

December 26.—Mr. M. Asovitch's store, 221 Jarvis Street. Loss $600. Insurance $1,000. Cause unknown.

St. John, N.B.—December 23.—96 Pond Street. Loss $1,500. Insurance, $1,000, North American Company. Cause, started in old rags.

December 26.—Basement of McAvity foundry. Loss and cause unknown. Mrs. M. Seely's store, 150 King Street, West End. Loss unknown, covered by insurance. Cause, upset lamp.

December 24.—Mr. C. Wissenger's auto repair shop, Main Street. Loss unknown. Mr. Kelly, owner of business, had $2,000 insurance in Western Company and Royal Exchange Company. Cause, stove.

New Westminster, B.C.—December 6.—Mr. J. G. Smith's furniture store and Messrs. Conden and Comas' Greek club. Loss, Messrs. Smith and Whittaker, building $543. Insurance, London, Liverpool, and Globe, $3,500. Contents of club, $1,111. Insurance, Occidental Company, $1,200. Furniture stock, $143. Insurance, Citizens' Insurance Company, $1,000. Cause, defective gas jet. Adjusted by J. S. Rankin, Vancouver.

December 19.—Mr. C. G. Magor's brick block. Loss slight. Cause, defective flue.

December 20.—Chinese lodging house. No loss. Cause, chimney fire.

Vancouver, B.C.—December 11.—Store owned by Mr. H. H. Ramage and occupied by Aileen Ferguson. Loss, building $1,383, contents $970, fixtures $75. Insurance, building, Norwich Union, $1,800; British Empire, $2,000; Intercolonial Underwriters, $4,000. Contents, National Union, $1,000; fixtures, National Union, $500. Cause, defective chimney. Adjusted by J. S. Rankin, Vancouver.

December 12.—Independent Transfer Company. Loss, contents $275. Insurance, contents $2,000. Cause, electrical defect. Adjusted by J. S. Rankin, Vancouver.

December 17.—Terminus Garage. Loss $250. No insurace. Cause, electrical defect.

Saskatoon, Sask.—December 9.—Mr. R. L. Baldwin's residence, 524 12th Street. No loss. Cause, oil stove upset.

December 10.—Messrs Agigie and Sharpe's store. Loss and cause unknown. Insurance, building $1,000, stock $3,000.

December 11.—Messrs. Elliot and Scott's store, 22nd Street West. Loss on contents, $1,400. Insurance, Dominion and London and Lancashire Companies; buildings $10,000, Mercantile; $4,000 on stock. Cause, overheated stovepipe.

December 13.—Pantorium, 420 20th Street West. Loss and cause unknown. Insurance on contents, $400, Anglo-American.

(Continued on Page 121).

NEW BRUNSWICK'S SATISFACTORY FINANCES

Record Revenue Collection—Agricultural Development is Extensive—Slight Reduction in Territorial Returns

The annual statement of the finances of New Brunswick is a most satisfactory showing.

For the fiscal year ending October 31st the total ordinary revenue of the province was $1,417,722.17, the largest in its history and an increase over 1911 of $70,645.12.

The expenditures for the year on ordinary account totalled $1,409,049.38, an increase of only $5,502.53 over 1911. The surplus on the operations of the year 1912 is $8,672.71, as against a deficit in the previous year of $56,469.80. In 1911 the total of public works expenditures was $415,761.40; for 1912 it was $373,286.46, a reduction of $42,474.94. This reduction was made possible by the large expenditures on wharves and bridges during the preceding three years to make them safe for traffic.

No bonds have been issued for several years, but the capital expenditures are floating in the form of treasury notes, the total of which outstanding at the close of the fiscal year amounted to $986,090.38, which includes the redemption of bonds bearing 6 and 4 per cent. interest, amounting to $90,000.

The capital expenditures for 1912 amounted to $197,123.23, of which $178,623.23 was for permanent bridges. In 1911, the capital expenditure was $317.591.56. The total cost of the survey of the Valley Railway, which was temporarily placed in the capital expenditure account and amounting to $29,832.53, has been paid into the provincial treasury by the St. John and Quebec Railway Company and is no longer a charge against the province.

Agriculture, Immigration and Good Roads

As the total expenditure of 1912 is only $5,502 more there is very little variation in the amounts for the different services. Education cost $2,023.54 more than in 1911, and public works $42,474.94 less. There is a reduction of $4,878.35 in the cost of agriculture, but in addition to the regular expenditure on this account, $6,725.18 was expended from the Dominion grant before the close of the fiscal year, and about as much since, so that the amount expended on agriculture through the provincial government was the largest on record.

More money is being spent for immigration and in the opening of the country by colonization roads and roads to new settlements. Under legislation passed by the government a sinking fund for the new issue of bonds has been added to the expenditures. The amount required for this purpose is in excess of $25,000 annually. For 1912 the charge was $25,580.25. The cost of executive government has been reduced, but the departmental and legislative assembly contingencies have been slightly increased, which is due to the larger volume of business transacted by the government every year.

Lumber Cut Was Short

On the revenue side of the account there is an increase in the amount credited to Dominion subsidies of $24,922.80, while there has been a reduction in the territorial revenue of $6,039.38, due to a short lumber cut. It was expected before the full returns came in that the falling off in territorial revenue would have been much larger. What was lost in territorial revenue was made up in the succession duties collected. In 1911 the total of succession duties collected was $5,720.60. In 1912 the total was $44,857.35, an increase of $39,136.75. The revenue from the provincial hospital is not so great as last year, while there has been a slight increase in the cost of maintenance, which, however, is still lower than the majority of the institutions of a similar character throughout Canada.

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt station for the week ended December 27th:—Cobalt Lake, 60,200; Nipissing, 87,931; Crown Reserve, 39,882; Trehewey, 54,030; Colonial, 46,668; Peterson Lake, 82,369; Drummond mine, 60,155; Bailey Cobalt, 40,000; Cobalt Townsite, 135,500; La Rose, 242,335; Buffalo, 119,412; total, 968,482 pounds or 484 tons.

In 1904 the camp produced 158 tons, valued at $316,217; n 1905, 2,144 tons, valued at $1,437,106; in 1906, 5,835 tons; n 1907, 4.850 tons; in 1908, 29,360 tons; in 1909, 29,941 tons; n 1910, 34,041 tons; in 1911, 25,089 tons.

◆

The capital stock of the Grenville Board and Pulp Company, Limited, has been increased from $75,000 to $150,000.

The Prudential Life Insurance Company, incorporated in Manitoba, will apply for a Dominion charter. The company's head office is at Winnipeg, Man.

On the completion of the new steel and iron works at St. John, N.B., for which the capital has already been subscribed by British capitalists, Messrs. Cammell, Laird and Company ntend to erect a shipbuilding plant, at first on a moderate scale, but with provision for extension as the business develops.

COMMENTS ON THE NEW BANK ACT.

General View is That Interests of Shareholders and Depositors Are Being Watched with Care.

The following are editorial comments, of other papers, respecting the new bank act which has been read the first time at Ottawa, and which will be discussed before the banking and commerce committee. The proposed revision of the act does not appear to have evoked any general interest.

There are no drastic changes in the revision of the act; but those proposed are in the interests of shareholders and the public.—Montreal Trade Bulletin.

Shareholders and Depositors

It is evident that in preparing the Bank Act the finance minister has given careful consideration to the whole banking situation and that he attaches due weight not only to the need for fostering the banking business of the Dominion, but also to the importance of safeguarding the interests of the shareholders and depositors. The introduction of the bill thus early in the session will give members of parliament the opportunity carefully to consider its provisions.—St. John Star.

The Government's proposed amendments to the Bank Act touch that statute at the points where further fortifying of the public interest and further adaptation to commercial conditions were shown to be needed. The last dozen years have brought new strains and tests which certain portions of the Act did not bear as they ought to have done. These have for some time been marked for attention, and the proposed amendments are well conceived to bring them into correspondence with the more exacting requirements of trade and industry in the second decade of the twentieth century.—Toronto Mail and Empire.

Time Alone Will Tell

The new Banking Act of the Honorable Mr. White, while very far from being a radical measure, seems to bring to most of the deficiencies and weaknesses that have come into evidence in the last ten years a carefully-considered remedy which is likely to do some good and can hardly do much harm. Critics of our financial system cannot say that the new finance minister has neglected any of the matters upon which complaint has been made, while opponents of drastic innovation cannot say that he has brought in any alterations of a rash or over-experimental character. Time alone will tell whether the proposed remedies will really eradicate the evils (or possibilities of evil) for which they are designed.—Montreal Financial Times.

This hesitating advance toward an independent audit is rendered almost useless by the fact that the external auditor is to have no power to examine into individual accounts. An audit conducted under such conditions would probably have failed to discover the rotten state of the Farmers' Bank, for the Keeley mine account looked all right, and it was only when the account was probed that the huge shortage was discovered. Mr. White will probably be forced by the pressure of public opinion to amend his bill in the direction of making the auditor independent and not virtually an employee of the bank whose affairs he is to inspect, and of providing for the probing of individual accounts when the condition of such accounts seems to make that advisable.—Toronto Globe.

Far Reaching Legislation

The new Bank Act, introduced yesterday, is a far-reaching piece of legislation. It is at once creditable to the banking system of Canada that new requirements should be provided for without undue innovation, and creditable to the government which has grasped the situation with a firm and fearless hand, yet with the prudence necessary to the country's financial equilibrium.—Winnipeg Telegram.

It fixes the relations of the Government—i.e., the executive of the people—with, perhaps, the most vital single business in the country, the business which handles the nation's medium of exchange.

The reason why the Government has a right to intervene in the management of that business, is that the business in question can only be carried on with the support and assistance of the Government. The Government confers upon it certain privileges—notably, the power to issue currency—and this gives the Government the right of entry into the affairs of the banks. This right the Government is bound to use for the protection of the customers of the banks. It is further bound to create such conditions in the banking business as shall establish public confidence in it; for the prosperity of the nation depends to a very large degree upon the measure of confidence which the plain people have in their banking institutions. Distrust means hoarding and meagre capital.

Mr. White proposes several advances in the Government supervision of banking.—Montreal Star.

◆

The capital stock of the Crown Gypsum Company, Limited, has been increased from $200,000 to $350,000.

The Barnett-McQueen Company, Limited, have increased their capital stock from $120,000 to $240,000, such increase consisting of 1,200 shares of $100 each.

CANADIAN BANKS IN NEW YORK.

Operations in Foreign Exchange and Stock Exchange Loans—Not Allowed to do a Discount Business.

Six Canadian banks have branches in New York, viz., the Commerce, Montreal, British North America, Merchants, Nova Scotia and Royal. These, according to the Wall Street Journal, have shared in the good business that appears to have been the portion of the general run of banking institutions last year. The Canadian banks are by far the most important of the foreign banking corporations doing business in the United States. In fact, in the class of business they do some of them compete closely with the national banks and trust companies.

But so diversified and extensive has the general demand for credit accommodation been last year that it was possible for the Canadian banks to reap their harvest in different fields of operation to those in which the New York banks have had a profitable year. These banking institutions have benefited from the active commercial demands and the discounting of paper for mercantile houses. They have gained little from the more or less high rates for money that have ruled on the Stock Exchange. The Canadian banks, on the other hand, do not do a discount business in the New York market. They are forbidden to do so by the state banking laws. Their principal operations in New York consist in loaning on the stock market and in foreign exchange, and in both of these lines they have done a good business.

Liquid Assets in Wall Street

In Wall Street call loans a large part of the Canadian banks keep their liquid assets. This is for two reasons. In the first place, it is the best market for this class of business on this side of the Atlantic, and in the second these funds are available at a moment's notice. Gold can be withdrawn in New York one day and received at Montreal the next.

The Canadian banks, on occasions, have had as much as $200,000,000 in loans in New York and London, principally New York, says the Journal, but for reasons referred to below they have had considerably less than that in New York this year. At the end of November the official statement showed $142,000,000 in loans elsewhere than in the Dominion. The loans in New York, as already said, are principally on Stock Exchange collateral.

Foreign Exchange Market

The Canadian banks are also a considerable factor in the foreign exchange market and their transactions last year were on a large scale. There is no proper market for exchange in Canada; hence the greater portion of the Canadian bills drawn against grain and other commodity shipments to Europe are sold on the New York market. Not only was this heavy last year, but there was a constant flow of capital into Canada from London and the United States to finance the development that has been going on in all commercial lines in Canada. Against the capital that has been secured in Europe much of the exchange transactions have been carried on in New York. This development has been going on for the past two years in Canada, regardless of the predictions made at one time that it would be short-lived and might end disastrously. It is because of this commercial prosperity at home that the Canadian banks have less in loans outside the Dominion now than they have had in former years.

◆

SCHWAB, GARY AND CARNEGIE QUOTED IN PROSPECTUS

How the names of Messrs. Charles M. Schwab, E. H. Gary and "Mr. Carnegie," were used in literature advertising a Canadian mining claim promoted by Julian Hawthorne, Josiah Quincy, Dr. William J. Morton, and Albert Freeman, was shown in evidence offered by the government in the trial at New York of the four men for alleged fraudulent use of the mails.

"Opinions given by high authorities," Messrs. Schwab and Gary and "Mr. Carnegie," concerning quality of iron ore obtained from mines controlled by foremost steel interests, are purported to be quoted in a letter written in May, 1910, to Julian Hawthorne by George J. Seay, a banker, of Richmond,Va. This letter is alleged to have been sent out as advertising for the Wilbur mine, a Hawthorne property, with a personal letter by Hawthorne introducing Seay as "incidentally one of the largest stockholders" in Hawthorne mines.

Mr. Schwab is quoted in the letter as stating that "the average ore being brought down by the Steel Corporation from the Superior region is 49 per cent."

The government offered the testimony of John W. Astley, a mining expert, that he reported to the Hawthorne offices in New York that his examination of the Wilbur mine showed him that the iron ore averaged 35 per cent., and was not present in sufficient quantities in any one place to make the mining of it easy or profitable. Judge Gary is mentioned in the Seay letter as testifying to the quality of iron ore in Canada.

HOW NEW BANKS ARE FARING.

Comparison of their First and Latest Statements to the Government—Another Soon to Start Business.

Another chartered bank, the Bank of Saskatchewan, will shortly commence business with headquarters at Moose Jaw. This institution obtained its charter some time ago and the organization is practically completed.

The Bank of Alberta is being formed at Edmonton and application will be made for a charter at the present session of parliament. Aside from these, the three newest banks on the list are the following:—

Bank.	Commenced business.
Bank of Vancouver	1910
Weyburn Security Bank	1911
La Banque Internationale	1911

How They Have Fared

It is interesting to see how they have fared. The following accounts are culled from the bank statements in which the various banks first appeared and from the statement of November, 1912:—

	Bank of Vancouver.	
	June, 1910.	Nov., 1912.
Authorized capital	$2,000,000	$2,000,000
Subscribed capital	611,500	1,173,900
Paid-up capital	291,995	846,600
Reserve fund	....	40,000
Dividend	....	....
Notes in circulation	....	435,545
Deposits on demand	....	825.032
Deposits after notice	....	759,242
Total liabilities	336,735	2,137,520
Call loans in Canada	....	300,000
Call loans elsewhere	....	....
Current loans in Canada	64,434	1,913,176
Current loans elsewhere	....	....
Bank premises	1,659	54,876
Total assets	336.735	3,056,318
Loans to directors	....	120,960

Weyburn Security Bank.		La Banque Internationale.	
Jan., 1911.	Nov., 1912.	Oct., 1911.	Nov., 1912.
$1,000,000	$1,000,000	$10,000.000	$10,000,000
602,600	630,000	10,000,000	10,000,000
301,300	315,000	1,026,940	1,359,833
....	15,000	....	....
....	5%	....	....
....	331,785	168,360	943,730
270,541	598,456	311,424	367,143
154,433	266,681	127.525	446,428
431,292	1,252,195	607.355	1,769,026
....	50,000	281,000	541,288
....	....	....	....
552,893	919,050	433,994	1,098,799
....	....	....	19,409
76,436	106,412	....	80,800
745,599	1,561,384	1,657.562	3,093,889
4,726	45,481	....	181.638

Reorganized or Absorbed

La Banque Internationale will either be reorganized or absorbed by another chartered institution within a comparatively short time. The Weyburn Security Bank, prior to 1910, was doing a private banking business as the Weyburn Security Company. The three institutions have branches as follows:—

Bank.	No. of branches.	All in
Bank of Vancouver	13	British Columbia
Weyburn Security Bank	10	Saskatchewan
La Banque Internationale	12	Quebec

There are now 25 banks. With the Bank of Saskatchewan in operation and if the Bank of Alberta gets its charter, we shall have 27 banks.

◆

The Canadian Pacific has placed an order with the Lackawanna Steel Company for 30,000 tons of steel rails.

The officers of the New Westminster bank clearing association will be: Mr. G. B. Brymer, Bank of Montreal, chairman; Mr. H. R. Davidson, Canadian Bank of Commerce, vice-president; Mr. J. Gracey, Bank of Toronto, secretary-treasurer and manager.

The Honorable S. N. Parent, chairman of the Quebec Water Works Commission, which has recently had its name changed to the Quebec Streams Commission and has been invested with the powers of a corporation in order to carry out its scheme of constructing a large storage reservoir on the upper St. Maurice, for the purpose of regulating the flow of that river for generating electricity, is in Quebec in connection with this work. The area of the proposed reservoir will be more than 300 square miles and the amount of water to be stored will be about 160 billion cubic feet. It will drain a basin of more than sixteen thousand square miles in area, and give a regular flow of 18,000 cubic feet per second in Shawinigan and other places.

NOVA SCOTIA, HIVE OF INDUSTRY.

Prosperity and Optimism Were Prevalent Last Year—Local Securities—Many Orders Booked for This Year.

(By Arthur S. Barnstead).

The wealth of Nova Scotia depends upon the extractive industries of agriculture, mining and fishing. These are the fundamental sources of wealth the world over and the beginning of all manufacturing and distributive processes. The farmer, the miner and the fisherman perform the opening operations in the great productive series. They obtain the raw material directly from nature and their employment is, therefore, steadier and freer from economic disturbances than that of the workers in the complex series of trades that have been built up on these three fundamental industries.

The season of 1912 was a good one for the farmers of Nova Scotia and resulted in crops only a little below the average. The grain and hay crops suffered somewhat owing to wet and cloudy weather, but these conditions yielded a heavy crop of potatoes and of roots. The apple crop will amount to about 1,000,000 barrels, and there was a large production of plums and small fruits. The numbers of horses and poultry increased during 1912 by 4 per cent., hogs by 2 per cent., and dairy and beef cattlé by 1 per cent.

Modern Methods in Fruit and Fishing Industries

An interesting development occurred during the last year in connection with the fruit industry. 27 local fruit companies incorporated in July under the name of the United Fruit Companies, Limited, of Nova Scotia. Each company participating in this movement subscribed 20 per cent. of its authorized capital toward the capital of the association, which is $50,000. All the subsidiary companies have agreed to pool their outputs of apples, the central association having complete control, selling or consigning as their judgment dictates, engaging steamship space and keeping a complete record of, and assumed responsibility for, the apples supplied by each subordinate concern. The company maintained an efficient system of inspection and guaranteed their pack to be uniformly graded and entirely free from spot. The United Fruit Companies will have shipped about 380,000 barrels and 17,000 boxes of high grade apples.

The fish production totalled about the same as 1911. There was a very fair catch of cod, lobsters and herring, and a small catch of mackerel. The fishing industry of Nova Scotia is now on a stable basis and it is no longer difficult to secure capital for a fish enterprise. The bait supply again fell far short of the requirements, and the cause of this shortage year after year is a matter for the earnest consideration of the proposed fisheries board.

It has been suggested that the introduction of Scandinavian labor into our fisheries would be beneficial to the industry. Many authorities claim that the Norwegians have a better system than ours of catching and curing cod and mackerel. The adoption of their curing methods would, it is claimed, enable us to market our fish in the southern European countries and in Brazil, where at present our stock does not sell well on account of salty surface and careless splitting.

Lumber Worth Over Five Millions

It is estimated that 325 million feet of lumber were exported from Nova Scotia during 1912. The lumbering industry was handicapped by the impossibility of chartering vessels, owing to the scarcity of tonnage, but this has been offset to some extent by the increased local demand from growing industrial centres. The export consisted largely of deals from the eastern part of the province and boards from the western part. The quantity used for domestic consumption amounted approximately to 100 million feet, and a large proportion of this consisted of pit props for the collieries. A large quantity of the pit props used are subjected to a creosoting process at the creosoting plant of the Tar and Chemical Company at Sydney. The plant, the only one of its kind in Canada, is unable to undertake orders for creosoted timber to use in the construction of bridges, piers, etc.

The total production was about 425 million feet and was valued at about $5,200,000. It is impossible as yet to state definitely the amount of timber wealth Nova Scotia at present contains, but in addition to the accumulation of growth, which is the production of past years, there is a large annual increment of growth. The importance of the conservation of this very valuable asset has been strongly urged on the general public during the past few years, and a great forward step was taken in the conservation of timber when the present fire protection system was established by the provincial government in 1904. The Nova Scotia system is admitted to be the best forest fire law on the North American continent. The next forward step in this direction must be the application of practical forestry by planting or re-seeding denuded areas.

The various coal companies throughout the province raised 6,800,000 tons during the year. This is an increase of 591,556 tons over 1911. The total sales reached 5,180,000 tons, a decrease of 376,464 tons, as compared with the previous year. 370,000 tons of gypsum were quarried, an increase of 72,359 tons. The gold production amounted to 4,950 ounces. 970 tons of barytes were produced, 230 tons manganese ore, and 14 tons of tungsten concentrates.

The outputs of coal and ore by the Nova Scotia Steel and Coal Company were larger than in any previous year. 855,000 tons of iron ore, 68,100 tons of pig iron were produced, and 80,600 tons of open hearth steel. The production of pig iron and steel was less than in 1911 owing to the fact that the blast furnace was idle from March 25th to May 9th, during which period it was completely relined. The total shipments from the New Glasgow works exceeded 75,000 tons, and the order books are well filled at this time. The entire quantity of iron ore that will be available for sale during 1913 has already been sold at favorable prices.

During the summer a plant for fluid compressing steel ingots by the Harmet process was established at Sydney Mines. A modern forge fully equipped with steam-hydraulic forging presses of 4,000 tons capacity. This equipment is equal, and in some important respects superior to, any on this continent and places the well known "Scotia" Company in the forefront as producers of forgings.

Steel and Coal Companies' Outputs

The Dominion Steel Plant at Sydney have completed a prosperous year. The works have been in continuous operation and the total output of pig iron for the year ended September 30th amounted to 307,070 tons. 345,751 gross tons of steel ingots were manufactured, 501,458 short tons of coke, and 5,213 gross tons of sulphate of ammonia. 651,434 gross tons of iron ore were used from the company's mines in Newfoundland, and 17,050 tons were imported from the United States. The plant finds it difficult to cope with the orders on hand, and the company is again arranging for increasing the producing power. On September 15th the fifth blast furnace was started, and in addition to their former products, the company now manufacture all kinds of steel wire, steel wire nails, and spikes. These products have been taken up readily by the market, and it is expected that an outlet will be found for this output without seriously interfering with similar outputs of other manufacturers. Like the Nova Scotia Steel and Coal Company, the Dominion Steel Corporation is one of the most self-contained in the world. The company is dependent upon no outside concern for any material, as they mine their own ore, produce their own coal and coke, smelt their own pig iron, and produce their own steel.

The Dominion Coal Company at Glace Bay and Springhill report 1912 to have been the most successful year in the history of the company. This company mined 4,960,000 tons of coal, of which 420,000 tons were produced at Springhill. Their total output was greater by 609,251 tons over their output for 1911. The company now operates 15 collieries in Cape Breton and 2 collieries at Springhill. Construction work during the year included a Baum coal washer, new loading pier at Sydney, a new bankhead at No. 14 colliery, a new power plant and reserve station at Lingan, and a large number of miners' dwellings.

The Acadia Coal Company of Stellarton had an output equal to, if not better than, the previous year, when it reached 466,337 tons. During the year the company completed the installation of a new central power generating station and completed the rebuilding of the surface and pumping equipment of two of their largest collieries. The construction work necessitated an outlay of over $1,500,000. The plant is now in excellent condition and next year a substantially larger output may reasonably be expected.

Operations of Various Companies

The reports from the general manufacturing concerns throughout the province show a generous expansion of business. The Canada Car and Foundry Company at Amherst employ 1,250 men, and will employ 1,600 when the steel underframe and bolster shops are completed and in operation. The output for 1912 had a total value of 4 million dollars, and included 2,250 freight cars, 280 refrigerator cars, 70 passenger, baggage and dining cars, and 12 snow plows. Orders to the extent of considerably more than 2 million dollars are already booked for this year. The Rhodes-Curry Company, Limited, and Malleable Iron Works, both of Amherst, also made large extensions during the year.

The Nova Scotia Car Works at Halifax reported a successful year, 550 men being employed and during 1912 the output consisted of 1,200 wooden box cars, 650 steel cars, 2 postal cars, 2 stock cars and 4 tram cars. Orders are now booked which will keep the plant working at full capacity up to July, 1913, and large additions to the works are being planned to protect future business.

Messrs. Wm. P. McNeil and Company, Ltd., structural steel works, New Glasgow, had a satisfactory year. When a number of extensions and improvements to their plant are completed, they will be able to turn out 1,200 tons of finished material every month. At present this company is engaged on the steel work for the new Eastern Car Company plant at Trenton, Nova Scotia. The main building of this concern will be 1,100 feet long by 360 feet wide, and will be one of the largest mill buildings in Canada.

The Halifax Cold Storage Company at Halifax and Port Hawkesbury, was taken over by the North Atlantic Fisheries, Limited. This company will operate cold storage plants, curing and canning factories, and will carry on business as dealers in fresh, smoked and canned fish. The success that attended the operations of the Halifax Cold Storage Company gives a decided impetus to the progress of the new concern, as the same officials are still in command. The company's plants are capable of handling 20 million pounds of fish per year, equivalent to 1,000 carloads of 20,000 pounds to the car. Plans have been prepared for doubling the capacity of the plants.

Bricks, Tools, Etc.

The Nova Scotia Clay Works, Limited, an amalgamation of brick and tile companies, was incorporated in February. The principal plants are situated at Pugwash, Elmsdale, Shubenacadie, Avonport, Middleton, Bridgetown, and Annapolis, and are favorably located for shipping both by rail and water. The Annapolis plant is the largest in the maritime provinces, with an output of 10 million bricks for 7 months. Since incorporation, the company has manufactured 17 million stock brick and 200,000 feet of farm tiles. The policy of the company is to make their product popular for the construction of residences and small buildings generally. They believe that it would be to the best interest of the public from many standpoints if brick were more largely substituted for wood in the construction of moderate sized houses. The Standard Drain Pipe Company at New Glasgow have completed an addition to their plant which adds 50 per cent. to the output, and they purpose further extensions this year, when they will employ 250 men and have an output of over 3,000 carloads per year.

The Canada Tool and Specialty Company, Limited, of New Glasgow, manufactured rifle sights, taps, cutters, dies and timers to the value of over $30,000, and have orders on hand that will keep the plant busy for three months to come.

The Amherst Boot and Shoe Company, Limited, have completed their most successful year. The sales exceeded one million dollars, and orders exceed those of previous year by 25 per cent. The company is planning large additions to the plant in order to cope with the increased business.

Pulp and Textile Companies Were Busy

The MacLeod Pulp Company, Limited, at Liverpool, operate at present two pulp mills, with a daily capacity of 100 tons, and one card-board mill, with a daily capacity of 20 tons. The total output for 1912 was 2,200 tons of pulp and 4,800 tons of card-board. The total output of 1913 has already been disposed of. At the present time over 70 per cent. of the pulp made is shipped to Great Britain and the United States, but it is the intention of the company to convert all of the pulp into card-board and paper. They also propose to erect a sulphite plant, as at the present time they are compelled to import this commodity from Norway.

The textile and allied industries have had difficulty in supplying the largely increased demands for their products. The volume of business at Stanfields, Limited, Truro, was greater by $250,000 than any other year in their history. The Hewson Pure Wool Textiles found it necessary to enlarge their plant, and half the output for 1913 is already sold. The Dominion Textile Company of Halifax report a busy year, with indications of increased activity during 1913. The Cosmos Cotton Company at Yarmouth ran their mills continuously throughout the year, and marketed 1,960,000 pounds of cotton duck. Recent additions to the plant double its capacity. Orders now on hand will consume all the production for the next four months. The Consumers' Cordage Company at Dartmouth have had an increased output and have large orders on hand. The western markets for the products are steadily extending.

Moirs, Limited, of Halifax, manufacturers of biscuits and confectionery, doubled their capacity during the year, but are unable, nevertheless, to fill the orders from the west. Messrs. G. J. Hamilton and Sons, of Pictou, who are in the same trade, report largely increased business over 1911. The operations of this company do not extend farther west than Quebec, but they are heavily interested in the West India trade.

Local Companies and Their Stock Issues

Local interest in local securities was decidedly greater in 1912 than in 1911. Nova Scotians are awakening to the industrial advantages of this province; $2,500,000 of Nova Scotian capital was subscribed for Nova Scotian industries. In view of this, it is interesting to note that only about $500,000 was subscribed for outside issues. This is an illustration of the present optimistic feeling in Nova Scotia.

There has been a marked preference for higher interest yielding securities. Mortgage rates have tended to increase and 6 per cent. is almost uniform now. The number of commercial failures of any consequence amounted to five. These were all said to be due either to poor management or to insufficient capital. The Nova Scotia fire insurance companies' business increased by about 5 per cent.

All in all, 1912 was the most generally successful year in the history of Nova Scotia. This province has passed through the lean years of a long preparation and the years of prosperity are now at hand. For its size, no other portion of Canada can scarcely show greater industrial activity. And in this expansion the industrial leaders are following the soundest economic principles.

The capital stock of the M. Langmuir Manufacturing Company of Toronto, Limited, has been increased from $200,000 to $400,000.

WATER POWERS WANTED.

The Monetary Times has an inquiry for some small water powers of about 2,000 h.p. They are required by manufacturers of carbide.

JANUARY DIVIDENDS

To holders of stocks and bonds listed on Canadian exchanges there will be paid approximately $20,580,000 during the coming month. On Canadian securities, unlisted and listed abroad, there will be paid about $26,000,000 in dividends.

NEW HARBOR COMMISSIONERS

Messrs. W. G. Ross, F. Robertson and Lieutenant-Colonel A. E. Labelle are the new harbor commissioners for Montreal. They took office on Wednesday.

Mr. Ross is a prominent business man and is a Montrealer by birth. His business career has been a bright one, and as managing director of the Montreal Street Railway from 1905 to 1911, he did much to make that one of the strongest of Canadian corporations. At the present, Mr. Ross holds the following offices: President of the Asbestos Corporation of Canada, director in the Dominion Steel Corporation, in the Quebec Railway, Montreal Light, Heat and Power Company; also many other official connections with noted Canadian corporations.

Mr. Farquhar Robertson, coal merchant, hails from Glengarry county, Ontario, having devoted several years of his life to farming in that district. His first step into commercialism was made when he became manager of a Montreal lumber concern. He started his coal business in 1879. Mr. Robertson is a director of the Montreal Transportation Company, the Prudential Trust Company, and was president of the Montreal Board of Trade in 1909, having been vice-president the year before. He is prominently identified with charitable undertakings, and was three times elected by acclamation to represent St. Andrew's ward in the city council.

Lieutenant-Colonel Alfred E. Labelle was born in Montreal, and has been for more than a quarter of a century one of Canada's most prominent grain merchants. In company with Sir Rodolphe Forget, George A. Grier and Thomas Williamson, he organized the St. Lawrence Flour Mills Company, of which he was chosen managing director. He is the president of the Chambre de Commerce and is prominently identified with the Canadian militia.

UNION BANK OF CANADA

An exceptionally comprehensive review of conditions was given by Mr. John Galt in his presidential address to the shareholders of the Union Bank of Canada. He dealt in detail with factors of development in the prairie provinces, British Columbia and eastern Canada. Crops, immigration, railway expansion, mining, the live stock industry, dairying, mixed farming, lumbering and other features were treated in expert manner and in a way which would appeal to the busy man. His survey of the situation indicates that the Dominion will enter upon the new year with general prosperity and excellent conditions in prominence.

The net profits of the bank for the year ended November 30th, 1912—and the present is the forty-eighth annual statement—amounted to $706,832. This was over 14 per cent. on the average paid-up capital during the year. Altogether there was a sum of $826,388 for distribution. A dividend of 8 per cent. for the year absorbed $298,063. The sum of $242,940 was transferred to the rest account, which is now the substantial sum of $3,300,000, compared with paid-up capital of $5,0000,000. An amount of $100,000 was written off bank premises account and $10,000 was contributed to officers' pension fund. This left a balance of profits carried forward of $75,483.

Comparing the figures in the balance sheet under review, with those of November 30th, 1911, the deposits have increased by $10,400,000, namely, from $45,232,460 to $55,643,353. The subscribed capital stock has been fully paid up during the year and now stands at $5,000,000. The rest account has been increased by $243,000, bringing it up to $3,300,000, or 66 per cent. of the paid-up capital of the bank. The total assets are $11,000,000 greater than in 1911. This is largely accounted for by the increase in the deposits. The statement has been received with much satisfaction.

The bank, which moved its head office from Quebec to Winnipeg recently, increased its holdings of government, municipal, railway and other debentures and stocks during the year by $1,000,000, and its loans and bills discounted current by $9,000,000, bringing these two items up to $3,782,063 and $45,015,074 respectively. This is but one indication of the general expansion in the business of the bank.

RECENT FIRES

(Continued from Page 116).

Montreal, Que.—December 20.—Hughes-Owens Company and Tooke Brothers' premises, corner Notre Dame Street West and Dollard Street. Loss slight. Cause unknown.

December 27.—Chinese laundry, 1a Mentona Street. Loss unknown. Cause stove. Miss M. Seymour's millinery store, 1216 St. Catherine Street East. Loss $4,000. Cause unknown.

December 30.—Standard Paint Company of Canada roofing mill, near Blue Bonnets. Loss $100,000, insured. Cause unknown. O.K. Spice Mill Company, opposite Laval University. Loss $16,000, no insurance. Mr. G. Nicot, loss $500; British American Film Company, loss $2,500; no insurance. Cause, supposed defective wire.

BOND TENDERS INVITED

Monetary Times' Weekly Register of Information for Bond Dealers and Municipal Officials

Saanich, B.C.—A by-law to raise $350,000 is to be submitted to the ratepayers at an early date.

Osage, Sask.—The village will borrow $1,500 for completion of hall. J. E. Kilty, secretary-treasurer.

Otthon, Sask.—The village has been empowered to borrow $2,000 for street and sidewalk purposes. A. Forsyth, secretary-treasurer.

Million S.D. No. 1603, Man.—Until January 15th for $1,000 6 per cent. 10-year debentures. E. K. Minor, Million, secretary-treasurer.

Delisle, Sask.—The council board of the village has been authorized to borrow $1,000 for fire hall. H. N. Freeman, secretary-treasurer.

Prairiedale Rural Municipality, No. 321, Sask.—The municipality has been authorized to borrow $15,000 for permanent improvements. C. .E. Carruthers, secretary-treasurer, Howiedale.

Calgary, Alta.—Until January 14th, 1913, for $25,000 10-year 4½ per cent. school, and $950,000 4½ per cent. 40-year school debentures. A. T. Jewitt, secretary-treasurer, Calgary Public School Board.

St. Agnes R.C.S.D., No. 22, Sask.—Until January 25th for $50,000 5 per cent. 40-year school debentures. E. J. Baker, Moose Jaw, secretary-treasurer. (Official advertisement appears on another page.)

Victoria, B.C.—By-laws as follows will be voted on at the elections by the ratepayers:—Sewers, $700,000; waterworks extensions, $50,000; schools, buildings, $290,000; sea water baths, $125,000; total, $1,215,000.

Watford, Ont.—Application will be made to the Ontario Legislature for a special act authorizing the issue of debentures in order to purchase a site for a post office. Messrs. Cowan and Towers, Watford, are solicitors for the corporation.

Kamsack, Sask.—Until January 15th for $2,000 5½ per cent. 5-year hospital, $5,000 5½ per cent. 15-year road, and $20,000 5½ per cent. 20-year town hall debentures. A. A. Crawford, secretary-treasurer. (Official advertisement appears on another page).

Prescott, Ont.—Application will be made at the next session of the Ontario Legislature for an act to confirm a by-law to issue $35,000 30-year debentures for the construction of a subway and other works in connection with the Grand Trunk Railway terminal.

Saskatoon, Sask.—The finance committee's recommendations are that money by-laws as follows be submitted to the ratepayers at the earliest convenience, viz.:—$100,000 for the purchase of parks and street openings, etc.; $150,000 for electric light and power extensions; $70,000 for house sewer and water connections.; $25,000 for storm sewers; $100,000 for completion of intercepting sewer; $35,000 for the construction of a new sedimentation basin for the waterworks pumping plant; $20,000 for fire-proofing the pumping station; $100,000 for street railway extensions; $70,000 for the purchase of an incinerator and necessary site; $50,000 for the purchase of fire equipment and to cover certain over-expenditures on old by-laws; $20,000 for the erection of a storehouse. In addition to the above money by-laws, the following by-laws should be submitted to the ratepayers at the same time, viz.:—$50,000 for new pipe line across the river; $100,000 for the erection of winter fair building.

CANADIAN WHEAT IN NEW YORK

New Regulation Affecting Canadian Grain Goes Into Effect This Week

The new special rules regulating transaction in bonded wheat for future delivery, among members of the New York Produce Exchange, became effective January 2nd, 1913. The rule is as follows:—

"Wherever the term 'Bonded Wheat' is used, it will be understood as meaning "Canadian Grown Wheat, in Bond, at the Port of New York." All such wheat to be of Dominion of Canada official inspection as to grades. All offers to buy or sell bonded wheat for future delivery shall be in lots of 5,000 bushels, or multiples thereof, unless otherwise stipulated. Lots of less than 5,000 bushels shall not establish an official quotation.

Grades of Bonded Wheat.

"The following grades of bonded wheat are deliverable on contracts for future delivery:—No. 1 Northern, flat; No. 1 Hard, at a premium of 1c. per bushel; No. 2 Northern, at a discount of 3c. per bushel; No. 3 Northern, at a discount of 8c. per bushel.

"These premiums or discounts are subject to change by the Committee on Grain so as to conform with any change made in premiums or discounts in the Canadian markets.

"All contracts, however, shall be governed by the premium or discounts in effect at the time of the making of the contract.

"It shall be the duty of the Inspector-in-Chief, or his deputies, to inspect as to condition, and supervise the weight of all bonded wheat going into store, or afloat in the port of New York. He shall inspect as to condition and supervise the weight of all bonded wheat delivered from store, elevator, or afloat, and furnish a certificate as to condition of such grain.

Certificate from Carrier.

"It shall be the duty of the party delivering bonded wheat from store, elevator, or afloat, to furnish to the parts receiving such wheat a certificate from the common carrier (in case same is requested), stating that said wheat is covered by proper transportation and exportation bond, and on file at this port.

"The rules governing the trade in domestic grain shall govern the trade in bonded grain, except in so far as the special rules provide."

ONTARIO'S VITAL STATISTICS

The report of the Registrar-General of Ontario for 1911 has only just been published. It shows that during the year the department received 117,383 registrations as follows:—

Births	57,235
Marriages	25,807
Deaths	34,341
	117,383

This is an increase in the total registrations over those of 1910 of 3,937, divided as follows:—

Births	1,364
Marriages	1,771
Deaths	802
	3,937

It speaks well for the health of the province that the deaths show a considerably smaller increase than the births.

During 1911 there were registered 34,341 deaths from all causes; an increase of 802 over that of 1910. The ratio per 1,000 was 14.4, being 0.4 less than that of the previous year. Thunder Bay district gives the highest ratio, and Rainy River district the lowest. The latter is due to Rainy River having been bisected to make the district of Kenora. Of the county municipalities, 25 show increases and 22 show decreases.

The following table shows the diseases causing the ten highest rates of mortality:—

	Deaths.	Percentage of total.
Organic heart diseases	2,433	7.63
Tuberculosis	2,353	7.38
Cancer	1,602	5.02
Pneumonia	1,568	4.91
Infantile diarrhoea	1,367	4.28
Cerebral hemorrhage	1,015	3.18
Diseases of the arteries	985	3.08
Bright's disease	814	2.55
Typhoid fever	637	1.99
Paralysis	538	1.68

The city municipalities contributed 12,940 deaths, with a ratio per 1,000 of 17.1, and the towns of over 5,000 population 2,704, with a ratio of 16.6 per 1,000.

BRIGHT WESTERN OUTLOOK

Analysis of Immigration Returns—Industrial Progress —Cheap Power

Monetary Times Office,
Winnipeg, December 31st.

As we turn our faces to 1913, the outlook could scarcely be brighter. Prosperity prevails in all parts of the country and in discussing the situation with financial men, The Monetary Times is informed that the conditions for a good year are excellent.

During the past eight months of the fiscal year, beginning with April 1st, more European immigrants have settled on what is known as scrub or thinly scattered timber land in central Manitoba and elsewhere than ever before in the history of the immigration department. This is the statement of Mr. J. Bruce Walker, head of the immigration department in Winnipeg.

The chief locations made include the section of Manitoba lying west of Lake Winnipeg, the central and northern part of Saskatchewan and the central and northern part of Alberta. Large areas of fertile and heavily wooded lands are also to be found along the valley of northern Saskatchewan and in the Carrot River country.

Only a few years ago, the settlers from the old country would not look at anything but the bald prairie on which to locate, but time and general development of the country have changed these ideas, and the consequence is that, whereas a a few years ago, only a few immigrants settled in these sections named above, to-day these regions are receiving a greater quota of bona fide settlers than ever before. The claim is made that the virgin land covered with scrub timber is far more fertile than that of the flat prairie once that growth is removed and intensified farming is started.

Fifty-four per cent. of the immigrants of the past eight months have located west of the great lakes, while in 1911 the percentage locating in the same section was only 49 per cent.

Westward Travel Is Heavy.

All figures of the immigration department are based on the fiscal year. These figures show that during that time 321,058 people entered the Dominion from various ports, against 281,892 for the year 1911, which is an increase of 11 per cent. The trans-ocean traffic for the same period of time from all sections of Europe numbered 213,023 against 117,560 of 1911 and this in itself showed an increase of 18 per cent.

One hundred and eight thousand and fifty-three came from the United States as compared to 101,686 the previous year, an increase of six per cent. These brought in an aggregate of $1,000 each in cash, settlers' effects and stock. The wealth of the Dominion therefore has been enhanced during the period from April to November by $108,000,000. The number of British immigrants who arrived in the same period was 55 per cent., greater than in the same period of 1911.

Winnipeg's Industrial Expansion.

The past year was one of marked expansion for Winnipeg. The number of new industrial concerns started in Winnipeg last year, of sufficient size and importance to warrant incorporation, is well over one hundred, in addition to numerous lesser manufacturing concerns launched by individuals and partnerships.

Over a million and a quarter dollars have been invested in new industrial buildings or in extensions to old. The authorized capital of industrial exterprises started in Winnipeg during the year will amount to $15,000,000 with an additional sum of $4,000,000, which has been added to the capital of existing industrial companies. The present annual value of the output of Winnipeg's factories exceeds $40,000,000.

Many Opportunities Open.

Among the goods for the manufacture of which there are special openings offering in Winnipeg, and for which the market is almost unlimited, are farm an agricultural implements, including gas and steam tractors, paper and straw board mills, men's clothing, ladies ready to wear goods, foodstuffs, starch, footwear, metal goods, wire nails, hardware specialties, flax and jute manufactures, beet sugar, elevator machinery, automobiles and commercial motor carriages, home and office furniture, leather goods, cereal foods, dairy supplies, building materials, stoves, ranges, furnaces and heating plant.

The low comparative Winnipeg power prices will continue to constitute a great inducement for manufacturers and work[illegible] the city which has taken so strong an initiative in the industrial field of the west. Cheap power and light has done much for other cities, and in Winnipeg it has promoted our industrial growth and has decreased the cost of [illegible] water works operation and general municipal activities. Aside from this it has added to the convenience, comfort, cleanliness, healthfulness and economy of Winnipeg's homes and we are to-day, enjoying electric light at a price that enables the humblest citizen to use it freely in his home and it will continue to afford manufacturers facilities for increasing their production at minimum cost to supply this great western market.

REVIEW OF THE MONTH

Canadian Flotations in London—Investment Offerings —Dividend Changes

CANADIAN FLOTATIONS IN LONDON.

The following flotations of interest to Canadians were made in London during December:—

City of Lethbridge.—£128,100 4½ per cent. debentures at 92.

City of Moose Jaw.—£257,600 5 per cent. debentures at 98.

The following flotations were omitted from the November list:—

Nicola Valley Land and Trust Company, Limited.—£15,000 7½ per cent. participating cumulative preference shares at par.

Grand Trunk Railway.—£1,000,000 4 per cent. perpetual consolidated debenture stock at 95.

Algoma Central Terminals, Limited.—£500,000 5 per cent. first mortgage 50-year gold bonds at 95.

City of Saskatoon.—In the November Review this flotation was reported as £82,302 5 per cent. bonds. This should have read £400,000 5 per cent. consolidated stock.

SPECULATIVE AND INVESTMENT OFFERINGS

The following speculative and investment offerings were among those made in Canada during December:—

Progressive Mining Company, Limited.—Offering of shares at 10 cents. Capital, $500,000; par value of shares $1.

Central Realty Company, Limited, New Glasgow.—$100,000 6 per cent. 20-year sinking fund gold bonds at par, with 20 per cent. common stock bonus.

Dominion Rubber Company, Limited.—$300,000 8 per cent. accumulative preferred stock at par, with 50 per cent. common stock bonus.

Stedman Brothers, Limited.—$100,000 7 per cent. preferred stock at par with 20 per cent. common stock bonus.

Atlantic Sugar Refineries.—$2,500,000 7 per cent. cumulative convertible preferred stock at 95, with 35 per cent. bonus in common stock.

Colonial Coal Company, Limited.—$300,000 6 per cent. first mortgage sinking fund bonds at par with a 25 per cent. bonus of common stock.

NEW LISTINGS

Tucketts Tobacco Company securities, consisting of $2,500,000 of common stock and $2,000,000 of preferred, have been listed on the Toronto Stock Exchange.

The Montreal Tramways Company have listed $890,000 bonds on the Montreal Exchange.

DIVIDEND CHANGES

The Shawinigan Water and Power Company have increased their dividend from 5 to 6 per cent. per annum.

The Shredded Wheat Company have declared a dividend of 1+1 per cent. on the common stock, an increase in bonus of ½ per cent. over last quarter.

The Dominion Textile common stock has been placed on a 6 per cent. basis. The old rate was 5 per cent.

The Ottawa Light, Heat and Power Company have increased their dividend from 7 to 8 per cent.

A dividend of eight per cent. has been declared by the St. Lawrence and Chicago Steam Navigation Company. Last year's dividend was five per cent.

◆

The provincial inspector of mines reports that 44 new coal mines were opened in Alberta during 1912. These are principally in the country between the Red Deer and Athabasca Rivers. The same official estimates that the output of Alberta mines for 1912 will exceed that of 1911 by at least four million tons. Production, particularly in the Edmonton fields, is still far below the requirements of the available markets.

NEW INCORPORATIONS

Over One Hundred New Companies—Aggregate Capital Over Eighteen and a Half Millions

The number of charters granted last week was 102, and heir capitalization totalled $18,618,000.

Grouping the new concerns according to the provinces n which the head offices are situated, we have the following esults: -

Province.	No. of companies.	Capitalization
Alberta	41	$3,180,000
British Columbia	17	6,495,000
Ontario	16	5,530,000
Saskatchewan	14	945,000
Quebec	7	1,610,000
Manitoba	4	675,000
New Brunswick	3	183,000
Total	102	$18,618,000

The largest companies this week are:—

Vestern Canada City Properties, Vancouver	$5,000,000
Canada Interlake Line, Toronto	3,000,000
Vestern Builders' Investments and Loans, Calgary	1,000,000
League of Canadian Automobilists, Bridgeburg	1,000,000
Standard Securities, Montreal	1,000,000

The following is a list of charters granted during the past week in Canada. The head office of each company is ituated in the town or city mentioned at the beginning of ach paragraph. The persons named are provisional direcors:—

Vulcan, Alta.—Irving's, $5,000.

Didsbury, Alta.—Alexander Hotel, $15,000.

Coronation, Alta.—Coronation Curlers, $5,000.

Vermilion, Alta.—Central Alberta Agencies, $10,000.

Frank, Alta.—Frank Co-Operative Company, $10,000.

Camrose, Alta.—Camrose Natural Gas Company, $50,000.

Coquitlam, B.C.—Hynes Stone and Staff Company, $50,000.

Swift Current, Sask.—Swift Current Rink Company $25,000.

Davidson, Sask.—Davidson Development Company, $25,000.

Prince Albert, Sask.—General Finance Corporation, $25,000.

Morinville, Alta.—La Compagnie d'Agriculture de Morinville, $25,000.

New Westminster, B.C.—Westminster Furniture Company, $25,000.

Paddle River, Alta.—Paddle River and District Co-Opertive Society, $10,000.

Moose Jaw, Sask.—Dominion Furniture Company, $40,000. East Anglia, $30,000.

St. Catharines, Ont.—Marshall's $40,000. J. Marshall, G. G. Johnston, H. Hamill.

Victoria, B.C.—Quatsino Timber Company, $75,000 Bayward Brothers, $30,000, (builders).

Bonny River, N.B.—T. R. Kent Company, $35,000. T. R. Kent, O. V. Kennedy, G. M. Kennedy.

Bridgeburg, Ont.—League of Canadian Automobilists, $1,000,000. J. S. Lovell, W. Bain, R. Gowans.

Nanaimo, B.C.—Nanaimo Amusement Company, $100,000. Pacific Coast Packing Company, $50,000.

Brantford, Ont.—K. V. Bunnell and Company, $40,000. A. K. Bunnell, E. V. Bunnell, A. E. K. Bunnell.

Ingersoll, Ont.—Bonesteel and Handford, (undertakers), $10,000. T. E. Handford, D. A. Bonesteel, A. Staples.

Transcona, Man.—Transcona Centre Investment Company, $125,000. E. H. Bate, E. W. Bassett, J. D. Matheson.

Beaconsfield, N.B.—Maritime Properties, $99,000. A. B. Aitken, London, England, E. A. Smith, L. V. Lingley, St. John.

Farnham, Que.—Invincible Wheel Company of Canada, $150,000. M. A. Phelan, Westmount; W. Bovey, R. Fleet, Montreal.

Regina, Sask.—Marshall, Knight and Company, $75,000. Geddie, McKay and Smith, $100,000. Prairie Security Company, $250,000.

Moncton, N.B.—Scotch Settlement Fox Ranching Company, $49,000. Dr. J. A. MacNaughton, W. Steeves, Moncton; S. Brown, Hampton Falls, N.H.

Medicine Hat, Alta.—Medicine Hat Concrete Products Company, $50,000. Alberta Steel Products Company, $100,000. A. P. Day Investment Company, $30,000.

Saskatoon, Sask.—Toil Corporation, $50,000. Cope-Fletcher Furniture Company, $100,000. McFarlane's $100,000. Hygienic Laundry Company, $50,000. Motor Agencies, $25,000. Solid Investment Company, $50,000.

Hamilton, Ont.—Inglewood Club, $200,000. W. J. Southam, R. L. Innes, G. H. Southam. Famous Players Film Company, of Canada, $20,000. J. L. Lazarus, L. Mack, I. Raphael. St. James Park, $50,000. W. Lees, O. D. Peat, L. F. Stephens.

Ottawa.—Ottawa Varnish Company, $40,000. J. M. Young, Y. C. Hickman, A. A. Ayres. Ottawa Artificial Ice Company, $250,000. T. Lewis, J. F. Smellie, A. C. Travers Lewis. Rideau Townsites, $150,000. G. P. Brophy, W. J. Baskerville, J. F. Booth.

Winnipeg.—Exchange Taxicab and Auto Livery, $200,000. J. E. Harrison, W. S. Jones, J. H. O'Connor. Canadian Metal Shelter Company, $200,000. J. K. Sparling, W. F. Hull, A. Stewart. St. Francois Xavier Investment Company, $150,000. C. M. Mohr, K. G. Richards, H. N. Baker.

Calgary, Alta.—Western Distributors, $25,000. Calgary Electrotyping Company, $50,000. Enterprise Film Company, $200,000. Properties, $60,000. Tom Campbell Company, $50,000. Sunset Investors, $200,000. Alfalfa Land Company, $100,000. Standard Electric Company, $25,000. Home Bread Company, $10,000. Rosebud Townsite, $50,000. Johnston and Johnston, $50,000. Uplands, $25,000. Western Builders' Investments and Loans, $1,000,000. Fyshe, McNeill, Martin, Trainer, $200,000.

Toronto.—H. and G. Blachford, (boots and shoes), $100,000. H. P. Blachford, C. E. Blachford, F. A. Blachford. Debaker Sales Agency, $40,000. J. R. Roaf, M. Smith, C. W. Evans. Canada Interlake Line, $3,000,000. J. R. Marshall, A. B. Turner, H. A. Burbidge. Citizen's Land Company, $40,000. H. A. Clark, H. E. Redman, H. V. W. Laughton. Chemical Company of Canada, $50,000. N. Macdonnell, G. B. Coyne, W. A. Bew. Federal Engineering Company, $500,000. G. H. Kilmer, J. A. McAndrew, H. H. Davis.

Montreal.—National Optical Company, $50,000. G. C. Papineau-Couture, L. Fitch, Miss V. W. L. Henry-Anderson. Hyde and Sons, $100,000. F. Hyde, G. Hyde, Outremont; W. Roberts, Montreal. Concrete Products, $200,000. J. A. Ewing, L. G. Norris, Montreal; A. O. Dawson, Westmount. Canada Lumber Sales Company, $60,000. A. P. Beaupre, J. H. Poulin, A. St. Marie. Canadian Watson Solar Window Company, $50,000. F. G. Bush, G. R. Drennan, M. J. O'Brien. Standard Securities, $1,000,000. T. S. Owens, H. R. Drackett, G. A. Coughlin.

Vancouver, B.C.—Salmon River Lumber and Shingle Company, $100,000. Port Essington Water Company, $15,000. British Overseas Trust Company, $250,000. ◆

At the annual meeting of the Winnipeg Builders' Exchange, the financial report of the secretary, Mr. A. M. Rose, showed the exchange to be in flourishing condition. The election of officers resulted in the re-election of Mr. W. J. Davidson as president; Mr. F. Hinds, 1st vice-president; Mr. J. McQuarrie, 2nd vice-president; Mr. Thomas D. Robinson, treasurer; and the following to the board of directors: Messrs. W. P. Alsip, J. W. Morley, H. C. McMartin, and R. W. Paterson. The board is composed of twelve members, four retiring each year.

Mr. J. T. Wilkinson, the well-known Vancouver insurance man, is gone on a visit to Ormonde, Fla., where he will attend the annual meeting of the officers and agency directors of the New York Life Assurance Company, which will last from January 13 to January 16. He will go via California and will visit Mexico on the homeward trip, going as far south as the city of Mexico. Mr. Wilkinson is invited to attend the conference in his capacity as president of the $200,000 club, which is the highest honor which can come to any field man. His total for the year from July 1, 1911, to June 30, 1912, was $433,721 higher than that of his nearest competitor for the honor.

Union Bank of Canada

ANNUAL GENERAL MEETING

Held at Winnipeg, December 17, 1912

The 48th annual general meeting of the shareholders of the Union Bank of Canada was held at the banking house in Winnipeg on Tuesday, 17th December, 1912.

The chairman read the annual report of the directors as follows:

The directors beg to present to the shareholders the following statement of the result of business for the year ending 30th November, 1912, together with a statement of the assets and liabilities of the Bank.

G. H. BALFOUR,
General Manager.

During the year the head office of the bank was transferred from Quebec to Winnipeg.

During the past year forty-three branches and agencies of the bank have been opened in the following provinces:—Ontario, 13; Alberta, 9; British Columbia, 4; Manitoba, 5; Saskatchewan, 12.

Two branches in Ontario, which proved unproductive, have been closed. The total number of branches is now 285.

The customary inspections of the head office and of all branches and agencies of the bank have been made.

JOHN GALT,
President.

Winnipeg, 17th December, 1912.

The president, Mr. John Galt, addressed the meeting as follows:

I beg to move the adoption of the report, seconded by Mr. William Price, of Quebec, and Mr. R. T. Riley, of Winnipeg, our vice-presidents.

The financial position and the net profits of the past year will, I trust, meet with your approval. The present year marks an epoch in the bank's history, and it is, therefore, fitting that I should make a few remarks on the present position of the bank—its policy and the scope of its operations.

On July 1st the head office was removed from the city of Quebec to the city of Winnipeg. Such an important event calls for a review of the progress of the bank in past years and an explanation of the reasons which, in the opinion of your directors, necessitated this change.

The great growth of our institution is coincident with, and largely due to, the development of the west. The following figures will show how rapid this growth has been.

On the 31st of May, 1904, only eight and one-half years ago, when the present general manager took charge, our capital was $2,500,000; reserve fund, $1,000,000; and total assets, $20,602,110. To-day these figures are: Capital, $5,000,000; reserve fund, $3,300,000; and total assets over $69,000,000; or double the capital, over three times the reserve fund, and well over three times the total assets. The policy of the Union Bank has certainly been consistent. It was the first bank to establish a chain of branches in the west, and as railways and population spread westward we followed, and to-day, west of and ncluding Fort William, we have no less than 187 branches. This policy was criticized in earlier days, but it has since been adopted by all the large banks, and the results have amply ustified it.

We have opened this year a number of new branches, but we can assure you that this has not been done without careful consideration and a close examination of local conditions. One not conversant with western life would find it difficult to realize the change made each year in a few months by the ncoming thousands of new settlers. Vast areas of vacant and are brought under cultivation, new lines of railway are built, divisional towns established, and villages with stores and hotels spring up with magical rapidity. To these communiies a bank is essential, and one of the chief merits of our Canadian banking system is that it lends itself to the prompt establishment and equipment of branches whenever they are equired.

Mixed Farming.—Too much stress cannot be laid upon the mportance of mixed farming. It insures for the farmer a teady income all year round. Should his wheat crop be unfit for sale, it can be fed, with other coarse grains and roots, to his live stock. The world's demand for cattle is increasing, and we should be able, not only to supply our own needs, but also to export on a large scale. We must look to our agriculural products to pay the interest on our obligations, and inally to liquidate them.

Speculation in Land.—A good deal has been said about peculation in land. The increase in land values has added enormously to the assets of western business, and has to some extent formed a basis for extended credit, but this is not felt o be a drawback when the value is real and convertible. We consider that a business standing which is strengthened and enhanced by property holdings is entitled to a reasonable enargement of credit for legitimate business operations. The danger lies in speculation, and this bank should, in the future, as in the past, set its face steadfastly against this evil.

It is gratifying to note that there is every indication of continued prosperity in Canada. The character of our business shows that trade conditions are on a healthy basis, and we expect to have full scope for the employment of our money under advantageous conditions. We look forward to the future with a full degree of confidence.

In conclusion, let me say that your directors feel the responsibility which rests upon them, that they will do their utmost to safeguard the interests of the shareholders and depositors, and to properly fulfil the obligations which rest upon a great bank of taking care of the savings of the people, and of employing them prudently and safely in fostering the legitimate and active undertakings of commerce, of manufacturing and of farming.

The general manager, Mr. G. H. Balfour, addressed the meeting as follows:

Gentlemen,—It affords me much pleasure to welcome so many shareholders as are present at this, the first annual meeting to be held in the new home of the bank. The large number s an evidence of the interest manifested in the welfare of the institution by its western shareholders.

The reasons for making the change in the head office have been fully explained by the President.

The wisdom of the course adopted has been always fully concurred in by me personally, and, indeed, its necessity had become very apparent during the past few years owing to the rapidly increasing volume of business transacted by the bank in these western provinces.

The President has given you some figures bearing on the general expansion of the bank's position during the past eight years.

It may, however, prove interesting to you to learn in this connection that, whilst the bank had eighty-four branches in 1904, on the 30th of November, 1912, it had two hundred and eighty-five branches, and the number of officials employed had increased from 420 to 1,387 in the same period.

These figures must bear convincing testimony to the steady progress and expansion made in the past eight years.

Of these 201 new branches, 132 have been opened west of the Great Lakes.

Comparing the figures in the balance-sheet, now under review, with those of November 30th, 1911, it will be noted that the deposits have increased by $10,400,000, namely, from $45,232,460.80 to $55,643,353.98. These figures are considered very satisfactory and encouraging.

The subscribed capital stock has been fully paid up during the year, and now stands at $5,000,000.

The rest account has been increased by $243,000, bringing it up to $3,300,000, or 66 per cent. of the paid-up capital of the bank.

The total assets are $11,000,000 greater than in 1911. This is largely accounted for by the increase in the deposits above referred to.

Bearing in mind the exceptionally heavy expenses incurred during the year incident to the transfer of the head office from Quebec to Winnipeg, and to the opening of so many new branches, we are well satisfied with the result of the year's operations, namely, a net profit of slightly over 14 1-8 per cent. on the average capital paid up.

I may say that the full cost of opening a branch is written off at the end of the first half-year of its operations. This is a very heavy item in the aggregate when a number of branches are opened in any one year.

In the matter of steel chests alone, the bank has up to date invested more than $350,000, all of which has been paid for out of its profits.

Coming to the assets, it will be seen that the holding of gold and government notes is $700,000 more than last year, being additional cash reserves held against increased liabilities in the nature of larger deposits.

Notes and cheques on other banks in Canada whilst $1,000,000 in excess of 1911, merely represent the daily accumulated items for exchange with other banks.

The additional $700,000 due by agents in the United Kingdom pertains to money loaned in London by our branch there.

The bank has increased its holdings of government, municipal, railway, and other debentures and stocks during the year by $1,000,000, and its loans and bills discounted current by $9,000,000, bring these two items up to $3,782,063.70 and $45,015,074.74 respectively. This is in the nature of a general expansion in the business of the bank.

It was then moved by Mr. John Galt, seconded by Mr. William Price and Mr. R. T. Riley, that the report of the directors, now read, be adopted and distributed amongst the shareholders.

Mr. R. T. Riley spoke as follows:

"I have followed with as much interest as anyone present the very able address of the president—like everything else that he has undertaken, it has been well done and you can accept with confidence every statement made and be assured he has the endorsation of all his colleagues on the board.

"I am glad we have with us to-day some of our friends from Quebec, Montreal and Toronto, who doubtless hold the proxies of many of our eastern stockholders. The bulk of our stock is held in the east, and I wish to emphasize the fact that when the wise men of the east referred to by Mr. Galt saw the star of prosperity arising in the west and followed it, they did not abandon everything for this new vision—far from it—nor have their successors—for the business of the Union Bank in the east is larger to-day than ever before and will in no way suffer by reason of the removal of the headquarters of the bank to a point 1,500 miles nearer the centre of its activities, but there will be a well balanced extension all over the Dominion of Canada, with the centre rather than the extreme east as headquarters.

"The six months' experience your Winnipeg directors have had of headquarters work has been sufficient to give them some idea of their new and increased responsibilities—responsibilities not accepted without some hesitation—for a bank is something more than an organization for making money for its shareholders. It is a highly organized and intricate piece of machinery that is at the disposal of the public to facilitate the conduct of business—a public utility enjoying special privileges, and it is just as much the duty of the directors of a bank to see to it that these privileges are not abused as it is to protect its shareholders who, after all, own but a small percentage of the enormous sums of money passing through their hands.

"Like the president, I take a very hopeful view of the future. Our shareholders will never regret the confidence shown by electing a majority of their directors in this city. The west has always been well advertised—never so well as at the present time. It was never quite so 'wild and woolly' as reputed, nor is it now as extravagant and speculative as described by some. It is true the westerner spends some of his money freely and foolishly, probably because he makes it easily—but there is underlying the western community an element of good Scotch conservatism introduced by the Hudson's Bay factors—the Lord Selkirk colonists—and this good Scotch granite has been well built into the foundations of our commercial life here, and we shall endeavor to carry out the advice of our president, the exact phraseology of which I cannot remember but which, interpreted into the vernacular, is 'Be sure you're right; then go ahead.'

"I have much pleasure in seconding the adoption of the report."

Mr. William Price, of Quebec, expressed the pleasure that it gave him as the eastern vice-president, in visiting Winnipeg, to meet with the western shareholders, and stated that the Eastern Board in handing over the control to the Western directors, did so with the utmost confidence that the affairs of the Bank would be in good hands, be capably administered, and the future development of the business carefully fostered on safe lines.

The motion was then carried.

It was moved by Mr. W. R. Allan, seconded by Mr. Stephen Haas, that the meeting now proceed to the election of directors for the ensuing year, and that the ballot box, for the receipt of votes, be kept open until a quarter past 1 o'clock, or until five minutes have elapsed, without a vote being offered, during which time proceedings be suspended.—Carried.

The Hon. W. H. Montague, P.C., spoke as follows:

The president and gentlemen:

I have been asked by a number of the shareholders to propose a resolution. I am quite sure that the shareholders of the Union Bank have been very much gratified to receive the statement of affairs presented at this meeting. This statement of affairs shows the bank to be in an exceptionally prosperous condition, and it demonstrates as well that a most progressive policy has been pursued during the past year. The more closely the statement is examined the better the results appear to be.

As the president has suggested, the universal prosperity of Canada, coupled with the marked progress which is being made in every branch of our industry and commercial life, combine to make Canada at the present time ideal soil for the growth of an institution such as the Union Bank is. Nevertheless, sir, we recognize to the full that the splendid results which have been achieved during the past year could only have been achieved by an institution whose board of directors were skilled and wide awake business men.

I move, seconded by Mr. James Fisher, K.C., that a very hearty vote of thanks be presented by the Shareholders to the honorary president, the president, and the board of directors of the Union Bank of Canada, for the manner in which they have discharged their duties.

Mr. Jas. Fisher, in a few well-chosen words, seconded the motion, which was then carried.

It was moved by Mr. M. Bull, seconded by E. E. A. DuVernet, K.C., that the thanks of the shareholders are hereby tendered to the general manager, assistant general manager, superintendents, inspectors, managers and other officers of the bank for their devotion and zeal in the service of the bank during the past year.—Carried.

Mr. G. H. Balfour, general manager, and Mr. H. B. Shaw, assistant general manager, replied briefly on behalf of the staff.

The scrutineers appointed at the meeting reported the following gentlemen elected as directors for the ensuing year: Hon. John Sharples, Mr. John Galt, Messrs. Wm. Price, R. T. Riley, Wm. Shaw, George H. Thomson, E. L. Drewry, F. E. Kenaston, W. R. Allan, M. Bull, Samuel Barker, E. E. A. DuVernet, K.C., Stephen Haas, Lieut.-Col. John Carson, F. W. Heubach.

At a subsequent meeting of the newly-elected board, the Hon. John Sharples was elected honorary president; Mr. John Galt, president; Mr. William Price and Mr. R. T. Riley, vice-presidents.

F. W. S. CRISPO, Secretary.

LEGAL NOTICE

THE A. MACDONALD COMPANY, LIMITED.

PUBLIC Notice is hereby given that under the First Part of chapter 79 of the Revised Statutes of Canada, 1906, known as "The Companies Act," letters patent have been issued under the Seal of the Secretary of State of Canada, bearing date the 7th day of December, 1912, incorporating Harry Riley and William Robert Anderson, law clerks; John Fraser MacGregor and William Hamilton Walter, accountants; and Everett Bristol, student-at-law, all of the city of Toronto, in the Province of Ontario, for the following purposes, namely:—(a) To carry on the business of wholesale and retail merchants and for that purpose to import, manufacture, buy, sell, produce and deal in all kinds of goods, wares and merchandise, including groceries, provisions, bread, flour, biscuits and farinaceous compounds, hardware, dry goods, leather goods, canned goods, farm, garden and dairy produce, spices, condiments, pickles, jams, jellies, preserves, table delicacies, fruits, sugars, syrups, meats, live stock and dead stock, products of the sea, lakes and rivers and other articles of commerce; (b) To construct, acquire, hold, let and sell elevators, storehouses, mills, factories, bakehouses, shops, buildings, machinery and appliances; (c) To manufacture and deal in cans, boxes, baskets, jars, cartons, containers, labels and all kinds of sundries and supplies for canners, manufacturers shippers and dealers; (d) To establish warehouses, stores, agencies, depots and other markets for carrying on the business of the company; (e) To acquire, maintain, operate and carry on warehouses, stores, cold storage warehouses, elevators, mills, factories and other plant and equipment; (f) To acquire by purchase, lease, hire, exchange or otherwise and hold real or personal property, water lots, water privileges and powers and rights and interests therein, and to build upon, develop, cultivate, farm, settle and otherwise improve and utilize the same; (g) To construct, acquire, own, manage, charter, operate, hire and lease all kinds of steam and sailing vessels, boats, tugs and barges and other vessels, wharves, docks, elevators, warehouses, freight sheds and other buildings necessary or convenient for the purposes of the company; (h) To acquire by purchase, lease, hire, exchange or otherwise any rights or privileges which may be necessary or useful for the carrying on of the business of the company; (i) To construct or acquire by lease, purchase or otherwise and to operate works for the production, sale and disposal of steam, electric, pneumatic, hydraulic and other power or force, and to produce, create, develop, acquire by lease or otherwise, and to control and generally deal in and use, sell, lease, or otherwise dispose of such steam, electric, pneumatic, hydraulic and other power for any uses and purposes to which the same are adapted, provided always that the rights, privileges and powers hereby conferred upon the company in this paragraph in acquiring, using and disposing of electricity, when exercised outside the property of the company, shall be subject to all the laws and regulations of the provincial and municipal authorities in that behalf; (j) To apply for and maintain, register, lease, acquire and hold or to sell, lease and dispose of and grant licenses in respect of or otherwise turn to account any patents of invention, improvements or processes, trade marks, trade names and the like necessary or useful for any of the purposes of the company; (k) To lease, sell, improve, manufacture, develop, exchange, turn to account or otherwise dispose of any or all of the properties and assets of the company for such consideration as the company deems fit, including shares, debentures or securities of any other company; (l) To enter into any arrangement for sharing of profits, union of interest, co-operation, joint adventure, reciprocal concession or otherwise with any person or company carrying on or engaged in or about to carry on any business or transaction which this company is authorized to engage in or carry on, or to amalgamate with any such company; (m) To acquire by purchase, concession, exchange or other legal title the good-will, property, rights and assets and assume the liabilities of any person, firm or company transacting any business similar to that conducted by this company, together with the buildings, stock-in-trade and assets generally with such business, and to purchase, acquire and hold the stock or shares of stock in any other corporation carrying on business similar to that which this company is hereby authorized to carry on, or any business similar thereto, notwithstanding the provisions of section 44 of The Companies Act, and to pay for the same wholly or in part in bonds, debentures or other securities or fully or partly paid shares of the company, and to sell, lease or otherwise dispose of the same or any part thereof; (n) To acquire the stock, bonds or debentures of any railroad, elevator or transportation company carrying on business within the Dominion of Canada, notwithstanding the provisions of the said section 44, and to purchase, build or construct any elevator, railroad siding or branch line of railroad on lands owned or controlled by the company which may be necessary or convenient for the business of the company; (o) To issue paid-up shares, debenture stock, debentures, bonds or other securities of the company in payment or in part payment for any property, rights or easements which may be acquired by or for any services rendered to or work done for the company, or in or towards the payment or satisfaction of debts or liabilities owing by the company, or for raising money for any other purpose of the company; (p) To raise and assist in raising money for and to aid by way of bonus, loan, promise, endorsement guarantee of bonds, debentures or other securities or otherwise any other company or corporation and to guarantee the performance of contracts by any such company or corporation, or by any other person or persons with whom the company may have business relations; (q) To invest the moneys of the company not immediately required in such manner as may from time to time be determined; (r) To distribute among the shareholders of the company in specie and property of the company and in particular any shares, debentures or securities in any other companies belonging to the company, or which the company may have power to dispose of, but so that no distribution amounting to a reduction of capital be made except with the sanction, if any, for the time being required by law; (s) To carry on any other business, whether manufacturing or otherwise, which may seem to the company capable of being conveniently carried on in connection with its business, or calculated directly or indirectly to enhance the value of or render profitable any of the company's property or rights; (t) To lend money to customers and others having dealings with the company and to guarantee the performance of contracts by any such person; (u) To draw, make, accept, endorse, execute and issue promissory notes, bills of exchange, warehouse receipts, bills of lading, warrants and other negotiable or transferable instruments; (v) To sell or dispose of the undertaking of the company, or any part thereof, for such consideration as the company may think fit and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of the company, and to sell, improve, manage, develop, exchange, lease, dispose of, turn to account or otherwise deal with all or any part of the property and rights of the company; (w) To do all or any of the above things as principals, agents, bailees, contractors, trustees or otherwise and either alone or in conjunction with others, and to do all such other things as are incidental or conducive to the attainment of the above objects; (x) The powers in each paragraph are to be in no wise limited or restricted by reference to or inference from the terms of any other paragraph. The operations of the company to be carried on throughout the Dominion of Canada and elsewhere by the name of "The A. Macdonald Company, Limited," with a capital stock of seven million dollars, divided into 70,000 shares of one hundred dollars each, and the chief place of business of the said company to be at the city of Winnipeg, in the Province of Manitoba.

Dated at the office of the Secretary of State of Canada, this 11th day of December, 1912.

THOMAS MULVEY,
Under-Secretary of State.

24-2

BICKNELL, BAIN, STRATHY & MACKELCAN,
Solicitors for
THE A. MACDONALD COMPANY, LIMITED.

HOLLINGER GOLD MINES

The circular sent with the monthly dividend, at the rate of 3 per cent. on capital stock, or 15 cents a share, to shareholders of the Hollinger Cobalt Mines, Limited, says in part:—

"Compared with the provisional statement, issued upon October 26th, the statement shows a profit of $94,613.92 for the period October 27th to November 30th. The profits were really somewhat greater for this period, but actual returns from the smelters and certain corrections in plant and accounts payable, involving a readjustment of the figures, cause a slight reduction to appear in the profits. It must be kept in mind that these financial statements are subject to adjustment, particularly in connection with the estimated values of bullion, precipitates, slags, etc.

"Work in the mine progressed satisfactorily up to November 15th, and there were no disappointments in development or in the production of gold. It would have been possible to maintain the output of gold, (in view of the miners' strike), had we chosen to draw the broken ore from our partly finished stopes, but this would have put the mine into bad shape for future work, and it was decided that the shareholders' best interests would be served by temporarily reducing the output to a point which would meet dividend requirements and at the same time keep the mine in workable condition. We are now getting the new force of underground men organized and in a few weeks will be back to normal working conditions."

◆

Objection has been raised at Prince Albert, Sask., by several large property holders and owners of the principal large blocks as to the present fire insurance rates, the basis on which they are established being claimed to be puzzling, and an agitation is on foot to have the underwriters take the matter up with the council and the Board of Trade.

Confederate twenty dollar bills are being passed in Victoria, and detectives are watching for the source. These valueless slips of paper issued by the south during the civil war in the United States have a plain blue black with "twenty" printed in large letters. The face of the bill is pink, usually faded almost white, and there is a black band across the left end. A picture of a building in the centre and a man's head in the lower right hand corner are the other marks.

DEBENTURES FOR SALE

DEBENTURE TENDERS

TOWN OF KAMSACK

Sealed tenders will be received by the undersigned up to uary fifteenth, 1913, for the purchase of:—

$2,000.00 Hospital Grant debenture bearing interest at the rate of 5½%, repayable in five equal annual instalments of principal and interest of $468.35 and payable at the Canadian Bank of Commerce, Kamsack, Sask.

$5,000.00 Road improvement debenture bearing interest at the rate of 5½%, repayable in fifteen equal annual instalments of principal and interest of $498.13 and payable at the Canadian Bank of Commerce, Kamsack, Sask.

$20,000.00 Town Hall debenture, bearing interest at the rate of 5½%, repayable in twenty equal annual instalments of principal and interest of $1,673.60 and payable at the Canadian Bank of Commerce, Kamsack, Sask.

Debentures to bear interest from date of issue of pons.

Tenders will be opened at eight o'clock on the evening he 15th January, 1913.

The highest or any tender not necessarily accepted.

A. A. CRAWFORD,
Secretary-Treasurer

Kamsack, Sask.,
6th December, 1912.

TENDERS FOR DEBENTURES.

The Board of Trustees of the Calgary School District No. 19 of the Province of Alberta, invites sealed tenders for the purchase of:—

$25,000 School Debentures, principal repayable in 10 equal consecutive annual instalments, with interest at 4½ per centum per annum.

$950,000 School Debentures, principal repayable in 40 equal consecutive annual instalments, with interest at 4½ per centum per annum.

Tenders, which must be addressed to the undersigned, will be opened by the Chairman of the Board on Tuesday, the 14th day of January, 1913, at 8 p.m.

A. T. JEWITT,
Secretary-Treasurer.

City Hall, Calgary, Alberta.

TENDERS FOR DEBENTURES

Sealed tenders marked "Tenders for Debentures," will be received by the undersigned up to 5 p.m. January the 25th, 1913, for the purchase of $50,000 debentures, repayable in forty equal annual instalments, with interest at 5 per cent.

This issue is for the purpose of purchasing site and erecting thereon a four-room school.

The highest or any tender not necessarily accepted.

EDW. J. BAKER,
Secretary-Treasurer.

The St. Agnes Roman Catholic
Separate School District No. 22, Moose Jaw.

CABLE RATES REDUCED

The British Postmaster-General announces some further uctions in cable rates. The rate for deferred telegrams to wfoundland and the United States will be reduced by 1½d. word for messages sent via the Anglo-American Cable npany direct to the United States, and the Western Union le rates for day and week-end cable letters to same coun- es will also be reduced, and the periods of delay decreased. the case of cable letters, the rates for places in the east of nada an the United States will be reduced from 6s. for 21 rds to 3s. for 13 words, and instead of being delivered on second day after their despatch will reach addresses the after.

The new rate for week-end cable letters will be 4s. 6d. for 25 words, and be delivered on Monday instead of Tuesday, as at present.

The rates for both classes of telegrams to other places in Canada and the United States will vary according to the distance.

A service of week-end cable letters will be inaugurated with Australia, New Zealand, the South African Union, Rhodesia and Nyaasland. The charge for week-end cable letters to Australia and New Zealand is 18s. for 24 words and 9d. for every word beyond this limit. This rate will include the charge for delivery by post from the offices of the cable companies in Australia, New Zealand and South Africa.

UTILITIES COMMISSION AND TRAMWAYS COMPANY

Montreal is Watching With Interest What Appears to be a Test of Powers

Monetary Times Office,
Montreal, January 1st.

For a long time past the city has looked forward to the Montreal Tramways Company and the municipality getting together and straightening their differences. The delay which occurred following the acquisition of the company by the present control was considered natural, owing to the reorganization and new financing to be accomplished, but it was not supposed that negotiations with the city would be drawn out later than 1911. Now that 1912 has passed into history and 1913 has begun, and matters do not appear to have advanced, one of the local dailies has taken up the agitation and is finding good material regarding the long delay and the resentment on the part of the citizens. A most important point is to fix the responsibility, and this, it would seem, is not easy to do.

Request for Information.

News just received from Quebec seems to place the Tramways Company in fault on one point at any rate. Some time since, the Public Utilities Commission of Quebec province, requested the company to furnish it with certain information. This, it seems, the company has failed to do. The result is that the Commission's president, Lieutenant-Colonel F. W. Hibbard, has issued an order calling upon the company to appear before the Commission at Quebec on Wednesday, and show cause why it should not be held in default to comply with the order and why the commissioners should not take steps to obtain the information and details as it is by law authorized to do, and at the cost of the company. The original order was issued by the commissioners on October 8th, it having been decided to conduct an enquiry into the affairs of the company with the object of bringing to an end the present situation. In November, the date by which certain details and information was to be forthcoming, was extended till December 2nd, the enquiry being fixed for January.

Powers of Commission.

The commission has power to enter upon and take possession of any portion of the company's property, and may take over the direction of the company's functions and employ or dismiss the employees for such time as may be necessary to obtain the required information and the costs and expenses of this proceeding shall be at the discretion of the commission.

The present situation is all the more interesting because it, to an extent, places the commission on test, considerable criticism having been levelled at it from time to time. It looks a little as a trial of strength between the company and the commission. Montreal is looking forward with much interest to see what answer the company will make and what the outcome will be.

CANADIAN BANKER KNIGHTED

"Few can realize the amount of good he is doing the Dominion while ably discharging the duties of his high office," was a well-known statesman's summing up of the services rendered by Mr. F. Williams Taylor, who has received the well-deserved honor of knighthood, among others in the New Year's list.

Sir Frederick commenced his banking career in 1878 and rose step by step until in 1905 he was appointed acting manager of the Bank of Montreal in London, and in the next year assumed the managership. Last year he was awarded the gold medal of the Society of Arts for his comprehensive paper on Canadian banking. His recent address on Canadian loans in London, printed in detail in a recent issue of The Monetary Times, received much publicity, and added considerably to the confidence of English financiers in the stability of the Dominion.

Sir Frederick has been a frequent and esteemed contributor to the columns of The Monetary Times, and an exhaustive and instructive article from his pen will appear in the annual number of this journal next week. Sir Frederick has received congratulations from a host of admirers and friends both in Canada and England.

Canadian journalism has received imperial recognition with the knighthood bestowed on Mr. J. S. Willison, editor-in-chief of the Toronto News. The Canadian legal profession was also included in the high honors, the recipient being Mr. A. R. Angers, a well-known Quebec legislator, who was knighted Sir Auguste, is also a director of the Credit Foncier.

Sir James Whitney becomes a K.C.M.G.

PULPWOOD EXPORT RESTRICTIONS REMOVED

Quebec Government Has Changed its Attitude—Four Big Companies Will be Favorably Affected

Monetary Times Office,
Montreal, January 1st.

The change of face of the Gouin Government concerning the export duty on pulpwood from the province of Quebec has not received much comment. Perhaps the "Street" has no particular view on the subject, being contented to see a number of stocks develop activity and strength as a result of the change. Praise was showered upon the Quebec Government when Sir Lomer Gouin announced the policy of prohibiting the export of pulpwood cut on Crown Lands. Certain pulp and paper interests had for a long time been working to bring about the decision by the government. It was stated that the United States was short of pulpwood and that Canada held the key to the position.

What Was Argued Should Not.

It was declared that Canadians permit the export of their natural resources, more especially when these were exported in a raw state to furnish employment to thousands of employees on the other side of the International boundary line. The effect of the policy, so it was claimed, would compel mills in the United States to come to Canada, where the manufacture of paper could be carried on at a much lower cost than in the United States. It would now appear that the regulation has not worked just as expected.

The policy of the United States—which was made light of at the time as being ineffective—really appears to be the fly in the ointment. The action of that government permitted the import into the United States of paper manufactured in Canada from wood grown on private lands, but placed a duty against that produced from wood grown on Crown Lands, because the export of Crown Lands wood had been prohibited by the Quebec Government. The result was that the owners of the private lands received all the advantage, inasmuch as wood from these lands could be exported into the United States and the paper made in Canada from wood grown on these lands could also enter the United States free of duty. As for the Crown Lands wood, it could not be exported as wood and if it were made into paper the paper came under a tariff which placed the manufacturers of it at a considerable disadvantage as compared with those who made paper from private lands wood.

Order-in-Council Passed.

An Order-in-Council has now been passed by which the export restrictions have been removed, in part, at least, thus allowing paper which formerly paid duty in the United States, to enter free. Four companies have been mentioned as affected by the removal, namely the Laurentide, Price Brothers, the Wayagamack and the Belgo-Canadian. Hereafter, it would seem, the paper manufactured by these companies will come under the clause which provides free entry into the United States, the order prohibiting the export of the wood cut on their limits having been removed.

SOME GOOD ADVICE

During the course of an address in Toronto, Rev. Principal Gandier, said:—"This is Canada's growing time and it is also her time of peril. The expenditure of hundreds of millions of borrowed capital in great transcontinental railways and other public works has produced great prosperity. It has made the people rich, and they are lavish and extravagant in their spendings. Manufacturers have become wealthy, and great multitudes have made large fortunes in real estate gambling without adding anything to the wealth of the country.

"The fever of speculation is rife," Principal Gandier went on. "Our young men are unsettled. They are not content to give years to the mastering of some trade or a useful profession, and multitudes of native and foreign-born alike have no other thought than to exploit the country's wealth. They are intoxicated with the wine of continued prosperity, hardened by covetousness, and lost in self-indulgence.

"It is no easy task to reach their hearts and touch their consciences. Never did this country call so insistently as now for men of leadership, men who cannot be deceived by the glitter and glare of materialism. The country's prosperity is exhilarating its people to a degree of intoxication, and you who have come to share with us the great work God has allotted the Church in Canada are especially welcome. Young Canada needs the best preachers and teachers the mother country can spare."

Monetary Times Statistical Review and Outlook Number

NEARLY 300 PAGES—READY NEXT WEEK

¶ This issue will contain a full statistical and general review of the past year, and a comprehensive survey of possibilities for the coming twelve months. Accuracy and completeness have not been sacrificed to a desire to appear on the first day of the new year. The Monetary Times Annual has no estimates for 1912; it prints the actual figures, and is complete in every sense of the word.

¶ The leading feature is a series of articles especially written for this issue by representative residents of Great Britain, the United States, France, Germany, Holland, Denmark, Japan, Argentina, and other countries. These stories and their editorial preface show how Canada is elbowing its way into the international arena.

¶ The Premiers of the Dominion again contribute a message respecting the past year, and the outlook for 1913 in their respective provinces. Amongst the numerous other prominent contributors are Sir Edmund Walker, Sir Edmund Osler, M.P., Honorable W. H. Hearst, Professor O. D. Skelton, Mr. W. R. Lawson, of London; Sir William Whyte, Mr. N. W. Harris, of Boston; Sir Frederick Taylor, of London; Mr. Henry Clews, of New York; Mr. A. Barton Hepburn, of New York; Mr. George E. Drummond, Mr. C. R. Hosmer, Colonel Sir Henry Pellatt, Mr. R. S. Gourlay, Sir George Ross, Honorable J. Barrett, of Washington; Mr. J. L. Englehart, and Honorable P. T. McGrath, Newfoundland.

¶ Every phase of Canadian finance, business and general development is covered adequately by special contributors and by staff writers, This issue is of immediate interest and of permanent reference value.

"YOU WILL FIND IT IN THE MONETARY TIMES ANNUAL"

The chair will be taken at 12 o'clock noon.

By order of the Board.

ALEX. LAIRD,
General Manager

Toronto, 29th November, 1912.

NATIONAL LAND AND FRUIT PACKING COMPANY IN TROUBLE

English capital will not welcome the news of an order authorizing the winding up of the National Land, Fruit and Packing Company, Limited, which was granted at Toronto this week, while Mr. G. T. Clarkson was appointed interim liquidator. The company, which had offices at and a warehouse and factory on Fourth Avenue, Mimico, had authorized capital of £250,000.

It was formed in 1910 "chiefly for the purpose of producing and marketing apples grown in Ontario, and for this purpose acquired established orchards containing over 140,000 bearing trees, constituting what is believed to be the largest apple producing property in the world under one ownership."

"Every pound of apples," said the prospectus, "is commercially valuable in some form when apple growing is conducted on a large scale under one management. The company propose to establish a number of manufacturing plants close to each group of properties, and all apples which are not marketable in the ordinary manner will be sent to these factories and treated by evaporation or other processes. The by-products, such as peelings, cores, etc., are shipped abroad and sold at good prices. Evaporated apples find a ready sale in practically all markets, especially in Western Canada, at prices which result in almost as good a net return to the company as from the best green apples when exported and sold in the usual manner. Substantial additional revenue will also be realized from the production of cider, vinegar and pulp waste. The importance of utilizing this otherwise waste product will be appreciated from the fact that the company expects to treat by manufacture upwards of 12,000 tons of apples this season."

In June, 1911, the company offered in the London market 150,000 7 per cent. cumulative participating preference shares of £1 each. The prospectus estimated the net profit on the first season's crops at £43,517, "or more than four times the amount required to pay 7 per cent. on the whole of the preference shares."

The directors and officers of the company are:—Messrs. H. Pollman Evans, Toronto, president; president Union Life Assurance Company. T. Rolph, Toronto, vice-president; vice-president the Home Life Association of Canada. Hon. George E. Foster, M.P., Ottawa. D. A. Burns, Toronto; president Imperial Loan and Investment Company of Canada. W. M. German, K.C., Welland, Ontario; member of Dominion Parliament, County of Welland. E. L. Taylor, K.C., Winnipeg, director Acme Loan and Savings Company, and G. L. Campbell Dauncey, London, England.

◆

Arrangements have been completed under which a factory for the manufacture of women's ready-to-wear cotton goods will be established at Edmonton. The plant will start on a small scale, employing only about fifty hands at the commencement, but will be equipped with the most modern machinery and appliances, and the promoters have every confidence that the business will develop rapidly. Suitable property has been acquired in the neighborhood of Namayo Avenue, in the heart of the most densely populated portion of the city, and the necessary building will be erected as speedily as possible.

TO WIND UP BRITISH PACIFIC COAL COMPANY

A stormy meeting of shareholders of the British Pacific l Company was held recently at Vancouver, when criticisms he directorate were not wanting. The purpose for which meeting was called was stated in the official notice as ows:—

“That it is desirable to reconstruct the company and, ordingly, that the company be wound up voluntarily and Frederic R. Campbell, accountant, be and he is hereby ap- ted liquidator for the purpose of such winding up.

“That the said liquidator be and he is hereby authorized onsent to the registration of a new company, to be named British Canadian Coal Company, Limited, with a memor- um and articles of association which have already been ared and which have been approved of by the directors his company.

“That the draft agreement submitted to this meeting and essed to be made between this company and its liquidator he one part, and the British Canadian Coal Company, Lim- , of the other part, be and the same is hereby approved, that the said liquidator be and he is hereby authorized, uant to section 236 of the Companies’ Act, to enter into agreement with such new company (when incorporated) in terms of the said draft, and to carry the same into effect such modifications as he thinks expedient.”

Mr. Morrow, a director, explained that the company was of funds. Considerable development work had been done a 557-foot crosscut had revealed six seams of coal. A tram- had been nearly completed and a wharf had been built distance of 700 feet. The engineer had been at fault in estimates of the cost of these two works, and the cost been much beyond what was expected. It was intended to t to ship coal after the tramway and wharf had been con- cted, but the government inspector had stepped in and ered the construction of an air shaft before further mining carried on. There was no money available to construct this shaft, and so operations had come to a dead stop. He declared if the company could have shipped coal, it would have brought in sufficient revenue to keep things going. It was very difficult to raise money. The company was unable to sell more stock, because some of the shareholders were disposing of their stock at next to nothing.

The meeting was adjourned until January 11th.

DECEMBER MUNICIPAL BOND SALES

Total Was Smallest Since January a Year Ago—Five Provinces Were in the Market

The municipal bond sales in Canada for December, as compiled by The Monetary Times, amounted to $491,590, compared with $1,396,664 for November, and $1,243,593 for the corresponding period last year.

Five provinces were in the market. The largest issues were made by Melville and Brandon.

The following are the particulars by provinces:—

Saskatchewan	$170,400
Ontario	205,190
Manitoba	100,000
Alberta	11,000
Prince Edward Island	5,000
	$491,590

The following are the monthly totals compared with 1909, 1910 and 1911:—

	1909.	1910.	1911.	1912.
January	$2,540,862	$ 881,838	$ 420,337	$ 2,133,531
February	4,074,125	1,272,977	1,037,287	2,596,378
March	1,615,368	1,169,730	6,271,025	1,926,716
April	4,035,988	6,805,078	3,910,288	927,160
May	5,185,530	5,964,896	3,946,047	1,928,748
June	2,243,569	2,187,588	3,983,670	1,690,344
July	1,989,442	1,536,424	1,594,566	1,967,476

AS TO STATISTICS GENERALLY

The growth of life assurance within the recollection of the present generation is a circumstance to be reckoned in discussing statistics. Indeed, the recent development of insurance of all kinds has made, and is making, great demands upon statistical studies and conclusions. Statistics have been called the science of counting, but this definition is too narrow. An author, Mr. Bowley, thinks it may be rightly called the science of averages. But the definition given by Mr. W. I. King, M.A., declares it to be: "The method of judging collective, natural or social phenomena from the results obtained by the analysis of an enumeration or collection of estimates."

The growth of the science of accounting and the demand for uniform systems of accounts for all municipalities emphasizes the need of correct statistical methods. Again, numerous commissions have lately sprung into being, whose duties vary from the government of cities to the regulation or investigation of all private or governmental activity. The decrees of these commissions must rest largely upon statistical information. Every insurance company must base its rates upon computations derived through the study of large masses of data, and new statistics and new calculations must continually be made, for conditions of life are ever changing. An example of this is the novel subject of the insurance of working men against unemployment. It is truly said that "practical statesmen and men of affairs are not the only ones who find in statistics a most valuable ally. . . . The biologist thereby verifies the laws of variation and heredity. The economist seeks to establish laws of population, of wages, of prices, or to show the connection between financial crises and unemployment. The sociologist would demonstrate the relationship of sales of alcoholic liquor to crime, poverty, suicide." As one author puts it: The proper function of statistics, indeed, is to enlarge individual experience.

It is a common thing to find, even in these days, people distrustful or contemptuous of statistics. The writer recalls an instance where, calling upon a merchant in the province of Quebec not many years ago to ask for some trade figures for use in a compilation then being made, the merchant asked: "What good is it? Do I get any benefit?" The reply was that the benefit would be rather that of the community than of the individual. The opinion of the merchant was that such figures would be useless—"Mais, quelle sottise, c'est tout-à-fait inutile."

One class of people is disposed to think, when confronted with a mass of tables designed to prove so-and-so, that "figures will not lie"; another class, a little more learned, are prone to call all statistics tissues of falsehood. There are true and false statistics. An amusing example of failure to observe intelligently, appears in the book of a recent writer on Socialism, the main thesis of which is based on an erroneous table taken from a government report, the errors in the table being so glaring as to be at once evident to any one in the least familiar with statistical data.

The importance of accuracy in statistics is steadily becoming more apparent in many directions. In manufactures, in engineering, in commerce, in transportation, as well as in scientific pursuits, statistical information is needed in a thousand ways, and incalculable dangers and losses may proceed from inaccurate compilations. It thus comes about that great care and minute pains are taken to secure economic or sociologic data. In order to secure advance information as to grain crop conditions of the world, the large speculators on the Chicago Board of Trade have employed a number of enumerators or correspondents, the results of whose counts or estimates they compile. This procedure entails a heavy expense, and is beyond the means of most scientific enquirers. The great universities are coming more into view as compilers of valuable technical information for use in the sciences and in business. By means of the censuses of different nations and statistical bureaux there has become available a great mass of figures and facts suitable for expediting the world's progress. These facts and figures, by the labors of independent enquirers, have been so analyzed and their essence applied that many things and enterprises, hitherto remote and difficult, have been made easy in the modern world of traffic.

BACK TO THE SIXTIES

Canada revealed an astonishing appetite for money last year. It has done so for several years. As to the coming year, no sign of slackening is apparent. The cause of development means a continuous and heavy supply of funds. Capital from abroad in hundreds of millions of dollars is swallowed quickly by legitimate enterprises. Still more is wanted. For a half century forward we shall be asking for money to develop mines, timber, and industries, for money to finance many other necessary enterprises. Yet, a glance at the files of *The Monetary Times* of forty years ago, reveals the fact that in January, 1869, our banks were complaining of lack of business. The report of the meeting of the Banque Jacques Cartier, held in Montreal, at that date, tells a story in striking contrast to that of prosperity chronicled in our present issue. The Hon. J. L. Beaudry, president of the bank, which long ago ceased to exist, told the shareholders of smaller profits, of serious fluctuations in general business, and of failures which "succeeded each other with alarming rapidity." The result of the harvest was below the average. "Here," said the president, "as elsewhere, after many years of prosperity, an annoying reaction has made itself felt, and confidence strongly shaken, in paralyzing business, has produced an unproductive accumulation of capital. To such an extent is this the case that never in Canada was so much capital seeking employment."

Since those days, despite periodical depressions, much business history has been written. This year bank profits have been good, general business excellent, failures few and the harvest satisfactory. The reserve fund of the bank mentioned was equal to nine per cent. on its capital. To-day, that fund in the case of many banks, is considerably over fifty per cent.

Every page of the old issues exhibits an interesting comparison with happenings of these times. Good farm lands in the township of Dysart, in the county of Peterborough, Ontario, were being offered for sale by the Canadian Land and Emigration Company at $1.50 per acre. The Niagara District Bank, in January, 1869, declared a dividend of 4 per cent., which compares with many bank dividends in these days of three times that percentage, and more. The Toronto Board of Trade then, as now, were opposing the construction of the Georgian Bay Canal, passing a resolution to the effect that the shipping and commercial interests of the Dominion or of the Province of Ontario did not require that undertaking. Since then, Sir Robert Perks has become interested in the project and has hopes one day of building the canal.

The Bank of England rate on January 1st, 1869, was 3 per cent. Money was plentiful in the Montreal market, and our banks were supplying commercial wants "at 7 per cent. for good paper." The Montreal money market report of *The Monetary Times* this week forty-four years ago, stated that towards the spring "our moneyed men must find some new channel for investment, but what direction it will take it is impossible to say."

The only prospectus printed in the issue of our journal under review was that of the Ontario Peat Company. The company's property was situated in the townships of Humberstone and Wainfleet, Welland, Ontario. The prospectus quoted an engineer's report estimating the quantity of peat contained in these lands at "three millions of tons at the very least." The document certainly reflected the optimism of the prospectus writer of the sixties. "Peat," said the document, "can be laid down on the banks of the canal (Welland) at the cost of from $1 to $1.25 per ton, and can from thence be forwarded by water to market in all directions, at small cost, and without transhipment; to say nothing of the facilities and advantages afforded by no less than five railways, one of which, the Buffalo and Lake Huron, passes within twenty chains of the property. In addition to these advantages, the fact may be noticed, that about thirty vessels pass through the canal every day during the season of navigation, the steamers requiring fuel for their own use, and the sailing vessels seeking cargoes, and requiring ballast westward to Chicago and other points. The demand for this fuel for private consumption will be very great when its superior qualities become more widely known. Already railways and steamers are beginning to use it instead of wood and coal, with the most satisfactory results, experience having proved that one ton of peat is equal to about one and one-third cords of the best hard wood."

With a view to the full and proper development of the property, it was proposed to organize it with a capital of $120,000, in 2,400 shares of $50 each. Of this sum $50,000 was to be retained by the directors for working capital, the balance to be applied to the purchase of the real estate.

Forty years ago was not too far back for the promotion of doubtful companies in Canada, and *The Monetary Times* then was busy as it has been since in showing unscrupulous promoters in their true light. In 1869, the Honeysuckle and Bumblebee Mining Companies were making things interesting in Nova Scotia. These concerns were exposed by this journal, which said in its issue at that time: "The promoters of one of these companies pocketed eighty thousand dollars for an area that cost them (palm grease excepted) about two thousand five hundred dollars!"

Private banks were in evidence in the days of sixty-nine. Commodities were quoted at prices so low that, compared with those of to-day, the increased cost of living looks even more formidable. Just as our style of prosperity has changed since bankers were lamenting the lack of work for their money, so also has the feminine style of dress changed, for one of the regular advertisers in our early issues was "Robert H. Gray, manufacturer of hoop skirts and crinoline steel." Mr. Gray's industry was carried on in Toronto, from which city *The Monetary Times* has been published continuously every week since 1867, the year of Canada's confederation.

* * * *

If Professor Fisher's plan for standardizing the dollar is a hit at the cost of living, the affirmative vote is unanimous.

UNITED STATES STEEL CORPORATION IN CANADA

Probable Effect of Establishment of Canadian Plant—Its Present Organization in the Dominion—Iron and Steel Imports

The fact that the United States Steel Corporation has for several years been acquiring real estate at Sandwich, Ontario, led to the theory that at some time or another that corporation would establish a plant there. The time has apparently arrived, as, according to a dispatch from New York at a meeting of the directors of the United States Steel Corporation it was decided to build a new plant at Sandwich, costing approximately $20,000,000, to manufacture practically all classes of steel. The company has about 1,500 acres of land, with 1½ miles of waterfront opposite Detroit, Michigan. The corporation will probably erect a number of blast furnaces in addition to wire, rail, structural and bar mills. Tinplate and tube works may also be erected. All the details have not yet been arranged but it is likely that a bond issue to meet part of the cost of construction of the new plant will be negotiated. No date has been set for the beginning of construction, but work will probably be started as soon as all arrangements have been made. To operate the plant, a new subsidiary of the United States Steel Corporation will be organized in Canada.

Room for all, Says Plummer.

Mr. J. H. Plummer, president of the Dominion Steel Corporation, discussing the above announcement, said:—

"There is room for us all in Canada, and it is certainly better from the general standpoint that the trade should be in the hands of strong people. The Dominion Steel Corporation is not afraid of competition from the United States Steel Trust or anybody else."

Mr. J. R. Wilson, a Montreal director of the Dominion Steel Corporation, and also identified with the Canadian Steel Foundries, said: "One may draw his own conclusions as regards competition. For instance, in the buying of ore the Dominion Steel Company pays about $1.75 per ton, while the United States Company pay $3 to $4 for the same, and yet the United States company, with their vast knowledge, experience and money, can and are selling their finished product at $5 per ton lower than any other company, even at the recent advance of steel prices.

"Though I believe the United States Steel Corporation will do us no material harm, it is true there will be a great deal sharper competition immediately the plant begins to operate at Sandwich. Any competition will be felt largely in the West, where the country is growing and the demand is large, but in the East I do not believe the competition will be felt for the present."

Complains of Dumping.

In the annual number of The Monetary Times, published this week, Mr. Thomas Cantley, of the Nova Scotia Steel and Coal Company, complains of the extent to which Canada was utilized last year as a dumping market, illustrated by the fact that of the entire export of pig iron by the United States in 1912, 90 per cent. was thrown into Canada, while of finished products an enormous tonnage was disposed of in the same market at prices in many instances 20 to 25 per cent. below that at which they were selling raw pig iron five years previously.

Canadian steel manufacturers are anticipating early revision of the tariff. Any changes made will be announced in the budget speech which is not due, however, for several months yet. Mr. Cantley says that notwithstanding the enormous home demand, coupled with good trade and high prices in Great Britain, Germany and other European countries, owing to the ill judged action of the United States producers last year and the inadequate customs tariff applying to a considerable percentage of steel products imported from the United States. Canadian mills and forges find their earnings much less than they should have been under normal conditions.

Sandwich, where the United States Steel Corporation will establish its Canadian plant, is the capital of Essex County, Ontario, on the Detroit River. About two miles northeast of the town is Windsor, the terminus of the great western division of the Grand Trunk Railway. The town is on the line of the Sandwich, Windsor and Amherstburg Electric Railway and has a population of approximately 2,300.

United Steel's Present Canadian Interest.

The United States Steel Corporation is already doing considerable business in Canada through The United States Steel Products Company, which has charge of the corporation's export business. At least one plant in Canada. The Canadian Steel and Wire Company of Hamilton, Ontario, is already controlled by The United States Steel Corporation, but it is not a very large plant, and up to the present time almost solely has been manufacturing farm fencing. This plant is under the management of R. S. Rider, and is not operated through The United States Steel Products Company.

The head office of The United States Steel Products Company is in the Hudson Terminal Buildings, New York City, with Canadian sales offices in the Bank of Ottawa Building, Montreal, and at 220 King Street West, Toronto. The chief products sold are those of the Carnegie Steel Company, The American Steel and Wire Company, the American Bridge Company, the Illinois Steel Company, the National Tube Company and the Lorain Steel Company. The Montreal sales force has been specializing on Carnegie Steel products and the steel pipe made by the National Tube Company. The Toronto sales force has been specializing on the Carnegie Steel products and the triangular mesh concrete reinforcement made by the American Steel and Wire Company. Mr. C. B. Rittenhouse, Mr. C. L. Kelley and Mr. George A. Childs are the managers of the Montreal office. Messrs. Fred and C. H. Bruncke manage the Toronto office. The principal sales made up to the present time in Canada by the United States Steel Products Company have been structural steel shapes, bars, rods, steel sheet piling, wire mesh concrete reinforcement and steel pipe. It is not believed that any great quantity of wire rope, nails and the many other products of the United States Steel Corporation, have as yet entered Canada.

Steel Imports from United States.

The imports of iron and steel and their manufactures from the United States have almost doubled during the past few years, as the following table shows:—

Imports from United States.	Dutiable.	Free.
1908	$39,074,238	$6,663,160
1910	39,609,013	6,944,686
1911	56,874,605	7,598,002
1912	71,885,228	8,093,006

The iron and steel imports from the United States upon which duty was paid have increased since 1908 by $32,810,990 or 83.9 per cent. Those which came in free have increased $1,429,846 or 21.4 per cent.

The largest items of our iron and steel imports from the neighboring republic last year were as follow:

Agricultural implements	$4,181,842
Bar iron	2,334,208
Castings, various	1,010,113
Railway locomotives	187,[illegible]20
Gasoline engines	2,[illegible]00,655
Fittings for iron or steel pipe	050,244
Hardware	640,826
Hoop, bands, scoll or strips of iron or steel	730,410
Iron or steel billets	1,376,657
Iron and steel sheets, flat	668,859
Iron or steel sheets, rolled	1,173,[illegible]6
Iron or steel plates, etc	592,772
Bridge parts	445,757
Wire rods for wire making	125,26[illegible]
Iron in pig	1,49[illegible],278
Portable engines	6,00[illegible],815
Threshing machine separators	1,403,7[illegible]0
Machines, various	25,217,041
Angles, tees, beams, girders, etc.	4,456 646
Rolled iron or steel plates	874,606
Skelp iron or steel	2,021,185
Steel rails	2,422,722
Tools and implements	1,003,817
Tubing	1,550 462
Bridge plates	878,[illegible]
Wire	2,888,753

The imports of iron and steel from the United Kingdom last year were valued at $13,802,461.

Big Merger Story Indefinite.

A Canadian press despatch from Montreal says:—"An American syndicate, backed by a billion dollars and headed by Mr. C. M. Schwab, is after the Canadian steel companies. It is known that influential capitalists have been approached in the matter and that a handsome offer has been made to J. H. Plummer for control of the Dominion Steel Corporation. The proposed combination comprises The Bethlehem Steel Company, The Midland Steel Company, The Pennsylvania Company, The Cambria Steel Company, and Labelle Iron Works, the Dominion Steel Corporation and the Steel Company of Canada. There is no doubt whatever about the offer to Mr. Plummer, but it is also said that he declines to recommend a sale."

In response to an inquiry addressed by The Monetary Times to the Steel Company of Canada, Hamilton, Mr. C. S. Wilcox, president, says: "We have had no communication with United Steel Corporation on subject mentioned." Mr. Thomas Cantley, of the Nova Scotia Steel Company, wires: "Have not been approached by United States Steel Corporation."

Senator Curry telegraphs The Monetary Times as follows: "The United States Steel Company have not approached our company, directly or indirectly, with a view to absorbing any of our companies."

Mr. J. H. Plummer has not yet replied to the inquiry of The Monetary Times, but it is generally understood that the plans of the syndicate have been laid before him and before other leaders in the steel industry in Canada.

The scheme has been taken up by a powerful group of United States capitalists, and they are now actively at work on it. The Morgan firm is understood to have named the price at which it would underwrite the bond issue. The projected capitalization of this merger is $1,100,000,000, divided, it is understood, into $200.000,000 bonds, $500,000,000 preferred and $400,000,000 common stock. Whether or not it will be actually consummated, is another story.

◆

ACTIVITY ON MONTREAL STOCK EXCHANGE

Most of the Stocks are Inclined to Rise—Causes of Some of the Movements

Monetary Times Office,
Montreal, January 8th.

The Montreal stock markets are experiencing somewhat unexpected activity. The movement started with Richelieu and Ontario towards the end of the year, this stock advancing from around 110 or 111 to 117 in a few days, and then to 118 or 119, around which prices it has held. Afterwards, Montreal Power began rising, and from around 225 quickly ran up to 230. Later, the rise being continued, Power made 236 and then ran up a couple of points. Meantime, Shawinigan was playing is part, advancing from 137 to 148. Brazilian did not lag behind and from 88 and 89 ran up to above 90 and then made 95, and is now 98 to 99. Ottawa Power rose from 170 to 180, and during the past few days has made practically 190. Detroit, which not long ago was around 70, is now close to 80, and Laurentide has had an eight-point advance to 230. Tucketts, Canadian Cottons and Textile have had their turn for a few points, and Tram Power has experienced a rise, while Tramways has gone out of sight, probably on account of scarcity of stock rather than on its merits. McDonald, National Brick and Wayagamack have all advanced, as has practically every stock of any general interest.

Interesting as are these occurrences, they are not more interesting than the stories which are prevalent in brokerage circles regarding the cause of the movements.

Power and Shawinigan.

Take the case of Power, for instance, and Shawinigan, both of which stocks have already advanced more than ten points. No definite statements have been heard in connection with these stocks other than that they are going higher and that this advance will be more than justified by the news which will shortly be announced in connection with the financial reorganization of Cedar Rapids. It may be remembered that this latter power was secured a few years ago by Mr. D. Lorne McGibbon who later sold control to Montreal Light, Heat and Power and the Shawinigan Water and Power Company interests. Last week, a meeting of the company was held at which the shareholders authorized the directors to proceed to increase the authorized bond issue to $15,000,000 from the previous $10,000,000. Only about $1,500,000 of these bonds have been issued so far, the common stock issue being possibly $8.000,000. A trust company is engaged in preparing an announcement of the rights of shareholders of Montreal Light, Heat and Power and of Shawinigan Water and Power to subscribe to the new issue.

As for Brazilian, it is claimed that an active buying movement has developed in London and that a number of large buying orders have already been filled here. Also, it is said Toronto interests are buying. Ottawa Power has become prominent with an advance of about 20 points. Buying by insiders is still in progress, and it is expected that in a few days the remaining ten points separating the market from 200 will be crossed. One broker predicts 225. These predictions are given for what they are worth. Something of importance is taking place in Ottawa Power and an official announcement will shortly be made.

Detroit and Laurentide.

The cause of strength in Detroit is that an increased [illegible] is expected. Brazilian is a [illegible] stock and being a public utility with earnings said to be considerably more than enough to cover the dividend, expectations of higher [illegible] be explained.

Laurentide may have a further rise on the strength of the water-power situation as well as on account of the improved position of the company as a result of the removal of the prohibition against the export of pulpwood from its limits. Also, the announcement is made that the Laurentide Company has secured ownership and the power rights of the Canada Iron Corporation in the St. Maurice River, thus placing itself in a position to develop 80,000 horse-power instead of the 50,000 horse-power previously anticipated. It is assumed that when the company gets ready to finance the project, rights of some character will be forthcoming to shareholders.

It is thought that the earnings of Tuckett's amply justify the declaration of a dividend. Or, to put the matter more accurately, should the earnings continue at their present rate, a dividend will be justified during the summer.

Cottons and Textile.

Canadian Cottons is said to be in line for a further increase in price, owing to liberal earnings. Although no dividends are being paid on the common stock of the company, it is said that not less than 8% is being earned, and as the stock is quoted around 35, it is considered that an advance is justified on the outlook.

Dominion Textile has always been a heavy stock to move, so that its slight advance in the recent movement is not at all surprising. Two textile garment manufacturing concerns are also active—Tooke's and Converter's. The latter is paying 4% and is selling under 50, while Tooke's is not on a dividend basis but is selling at a little short of 60. It is claimed that the latter will go on a dividend basis next spring, the earnings being enough to justify this. As for Converters, there is every reason to think that it will shortly receive an increased dividend, the earnings of the company being at least twice the amount required to pay the present 4%. Accordingly, it is expected that the price of both stocks will advance.

A number of other stocks could be mentioned, of which it may be said that the future holds out good prospects and that by the end of the present year, all being well, they will be selling at more than at present.

◆

ROYAL BANK'S REPORT

Previous mention has been made in The Monetary Times of the report of the Royal Bank of Canada for the year ended November 30th, 1912. The report and statement were presented to the shareholders of this institution at the annual meeting at Montreal on Thursday. They indicated substantial growth of the bank in all directions. The net profits for the eleven months ended November were $1,527,324. The sum of $7,432,617, which was available for distribution, was appropriated as follows: Dividends, $943,585.97; transferred to officers' pension fund, $75,000; written off bank premises account, $300.000; transferred to reserve fund, $5,503,812, and balance of profit and loss account carried forward, $610,219.36. The reserve fund now totals $12,560.000, being $1,000,000 greater than paid-up capital.

The directors reported the purchase of the business of the Bank of British Honduras, Belize, B.H., on advantageous terms. This bank had a capital of $100,000, surplus of $80.000, and deposits of approximately $400.000.

The full report of the meeting of the Royal Bank appears on other pages, and is well worthy of perusal. The bank again made excellent progress last year.

◆

PERSONAL NOTES

Mr. C. E. Gault has been elected a member of the governing committee of the Montreal Stock Exchange.

Mr. E. L. Jarvis, of St. John, N.B., has been appointed general agent of the Anglo-American, Montreal-Canada Fire Insurance Companies for the Maritime Provinces.

Mr. H. B. MacDougall has been elected vice-chairman of the Montreal Stock Exchange in place of Mr. C. S. Garland, who has transferred his seat to Mr. Chester W. Root of the firm of Messrs. C. Simpson Garland and Company.

Mr. W. R. Brock has been elected honorary president and chairman of the board of directors of the Canadian General Electric Company, and Mr. F. Nicholls has been elected president to fill the vacancy created by Mr. Brock's election to the honorary presidency.

Mr. Joseph Hopkinson, who for the past three years has been with the firm of Webb, Read and Hegan, Winnipeg, and previous to that for six years with the firm of Murgatroyd, Shuttleworth and Haworth, England, has opened offices at 405 Nanton Building, Winnipeg, where he will practice as a chartered accountant.

EVERY DOLLAR IS WORKING OVERTIME

Development of Western Canada's Resources and of Dominion Generally Says a Well-known Canadian Banker

Monetary Times Office,
Winnipeg, January 7th.

Western Canada is most prosperous, and the land under ltivation by reason of the immense area covered, is assured ear after year of bountiful harvests, even should unfavorable imatic conditions occur. With a wheat crop approximating o,000,000 bushels in each of the past two years, with but a actional part of the cultivable land under plow; with the de of immigration ever increasing, not only in quantity, but quality; with unprecedented railway expansion in every rection. Winnipeg, the focal point of Western Canadian ansportation, may be said with certainty to be as yet only the beginning of things.

Mr. C. W. Rowley, of the Canadian Bank of Commerce, eaks of the past year and the great possibilities of Western anada's future in the following terms:—

"One only has to take up the papers and read the splendid atements of all the financial, railways, industrial and public ilities corporations to see that the country is prosperous, and see that the resources of all are actively, with advantage d fully employed, and that the growing pains of the country e as apparent to-day as they have been during the past few ars. Let us hope that the British investor takes a larger terest in active industrial enterprises as well as making instments in some of the many gilt-edged financial stocks high class bonds, and thus take a more permanent interest this country, which at present is but an infant in all its mmercial life, and in all other respects except its potential ealth and size which are now awaiting development and ltivation.

pportunities are Being Grasped.

"When using the word 'cultivation,' diversified farming meant, not 'wheat mining' as Sir William Whyte so truly scribes the present methods in Western Canada.

"Our cousins from the middle south are not at all slow in asping the great opportunities of investment this country fers. One has only to look at the make-up of many of the ms doing business throughout Canada to see that they are rgely interested in all active mercantile development. Inuded in this class are brokers, grain merchants, elevator ners, coal barons, lumber manufacturers, line lumber yard en, farm implement dealers, etc., etc., as well as stockholds in mortgage, trust and security companies, banks, etc., c. Add to this the capital of the United States' settlers, nich for the eight months ending November 30th, 1912, nounted to $162,000,000, and is about ten times as much as e combined capital of all other settlers. We need, however, ore British settlers, and in this respect Canada presents a eld in practically any capacity to any person who desires work and also offers boundless opportunities for women of ility and resource.

dustrial Increases are Marked.

"The past year has shown a steady increase all over anada in industrial plants, size and number, larger busisses for wholesale and jobber, extensions of railways, more d better equipment of same with the result of a very free ovement of crops, increase in all class of buildings and imovement in construction. In Winnipeg especially a decided iprovement in school buildings and school work is noticele, with the ultimate object of developing and making more eful the future generations and assimilating some thirty tionalities into good citizens making for a United Canada d Empire.

"Extensions and improvements in agricultural colleges, over Canada, are also needed, and an increase in the imber, so that instruction and assistance may be given ong the line of intensive and diversified farming in order at the present cultivated area will double its yield. This n be done, as exemplified in the Dakotas, Minnesota and her states.

"The waterways of Canada can also be greatly improved d made to carry much of her merchandise. The Panama anal should mean much to this country generally, and escially to British Columbia, the Maritime Provinces and uebec. It will not have much effect on the through freight affic of the railways. On the other hand, the increased affic of the interior and carrying the same to market or the aboard, will, if one can judge from the past, give them active nployment for their equipment.

"Good roads, improvement and increase in good hotels, ill do much to stimulate the influx of travel, which in turn eans the increase of foreign capital. Every dollar in Canada , and has been, working overtime for some years, and the isiness me generally should consider seriously the flotation of securities in connection with their businesses in order to have them properly capitalized and working easily with sufficient liquid assets and capital for the necessary expansion so that commercial development is on sound, broad lines for the present and the future. From the active demand for money and the increased cost of living (which necessitates a larger income to live than before) it seems apparent that the borrower must pay an increased rate for his money, as evidenced recently by sales of securities in London, New York, Toronto and Montreal, and does not mean a loss of confidence in this country."

◆

FIRST WITH THE NEWS AGAIN

The Monetary Times last week was able to announce exclusively:—

(1) The proposed amalgamation of the Guarantee and Sterling life insurance companies.

(2) The proposed stock issue of the Niagara Falls Power Company, and

(3) The fact that negotiations were actually in progress for the absorption of the Canada Interlake Line by the Richelieu and Ontario Navigation Company.

The Monetary Times is not only a paper of opinion and of reference value, but it is also first with the news.

◆

FORECAST OF ONTARIO COMPENSATION REPORT

"I shall not recommend any scheme that will involve the right to lump sum payments. It is desirable that there should be opportunity given to the Board to authorize that," said Sir William Meredith, at a hearing of the Ontario Workmen's Compensation Commission this week.

"This legislation is social. There is no disguising that fact. The very basis of it is to prevent the injured workman becoming a charge upon the community.

"If this were not so, one of the primary objections of the scheme would be defeated. If we allow compensation in a lump sum it might be squandered, and if that were permitted, it would defeat our primary object.

"I am at the present time against any such step that will keep any manufacturer or a railway out of the act. It is my advice that at the beginning it would be desirable not to include the railways, but they could be brought in and subjected to the operations of the Board after some experience as to how best they are to be grouped.

"There can be no legislation that will imply any guarantee upon the province.

"It is estimated that the Compensation Act will affect 400,000 people, and mean the expenditure of $250,000, a large portion of which must be shouldered by the province."

◆

GUARANTEE AND STERLING LIFE COMPANIES' MERGER

As exclusively announced by The Monetary Times last week, the Guarantee Life Insurance Company of Canada, promoted by Controller McCarthy, and the Sterling Life Assurance Company of Canada, promoted by Mr. J. W. Garvin, B.A., of Toronto, are to merge. The amalgamated company will be known as the Sterling Life Assurance Company of Canada, with Controller McCarthy as president, Mr. W. B. Unsworth as secretary-treasurer, and Mr. J. W. Garvin as managing director. The Sterling Life shareholders will elect five directors at the organization meeting to be held in the near future, and the subscribers of the Guarantee Life will elect four.

As the Dominion Insurance Act provides that as soon as $250,000 of the capital stock is subscribed and 10 per cent. paid thereon, the organization meeting shall be held, it is expected that the joint company will organize not later than March 1st, and that it will begin the sale of life insurance about June 1st.

As much of the company's money will be invested in the Western provinces subsidiary boards of directors are being formed in Winnipeg and Vancouver, and the capital stock is being sold generally throughout the Dominion.

When the flotation is concluded the amalgamated company will have a subscribed capital of $100.000, with $250,000 paid thereon on capital account, and $125,000 paid into the treasury on premium account. The provisional directors of the Guarantee Life are: Controller McCarthy, J. McLenaghen, W. B. Unsworth, W. C. Gall and G. F. Scott, all of Toronto; and of the Sterling Life, A. E. Munn of Orillia, and W. H. Shaw, W. W. Hiltz, N. R. Lindsay, W. H. Elliott, Dr. G. B. Smith, A. P. Poussette, K.C., and J. W. Garvin, of Toronto. The company has offices at 302 Kent Building, Yonge Street, Toronto.

PULP AND PAPER SITUATION

United States Manufacturers Complain, and Canada is the Burden of Their Sorrow—Dominion is Making Rapid Strides

The paper makers of the United States are dissatisfied with matters generally. The past year has been reported as one of small profits. The outlook is thought unsatisfactory and Canada figures as one of the adverse factors. According to a Wall Street authority prices have been unsatisfactory, especially in the case of the news printing industry. While prices have been maintained by some manufacturers, there is no disposition towards an upward tendency. It is the statement of the industry that in all standard grades of paper early steps should be taken for readjustment of prices. Manufacturers assert that the prices have been practically stationary for the past 10 years while cost of materials and labor have increased considerably.

How this Reciprocity Works.

Through the so-called reciprocity legislation the paper pulp manufacturers of the United States are confronted with the interpretation of the Treasury Department of Section II. of the reciprocity act, which is in effect to-day, in spite of the fact that Canada did not accept the proposition made by the United States as to reciprocal relations. The result of this ruling has been extremely detrimental to United States, manufacturers allege, and has caused large importations into the United States of wood pulp and printing paper. These importations reached high water mark in 1912, and their is no sign anywhere of their cessation. After the passage of this act, in 1911, capitalists, knowing from the United States tariff board's report that paper could be manufactured in Canada at $5.35 a ton cheaper than it could in the United States, invested largely in new mills in Canada, some which have just begun to operate and others will soon have their product on the market. The desirability of the United States market has led to most of the extra production being shipped to the United States, so that at present importations are coming in at the rate, it is said, of 125,000 tons a year.

Government and Private Wood.

Under this interpretation of the act, the Canadian manufacturer can ship his paper and pulp into the United States free, if he declares that it was manufactured from unrestricted wood, that is, wood from land of private ownership as distinguished from wood from government land. The result is that large amounts of Canadian paper, made from government wood, is shipped into the United States free of duty because the manufacturer declares it was made from private wood. Under the old Payne-Aldrich tariff schedule, the duties were assessed at the rate of $5.75 per ton on paper made from restricted wood and $3.75 on paper made from unrestricted wood. Under the ruling of the United States treasury department these duties have been eliminated on the bulk of the importations. When United States paper is shipped into Canada the Dominion Government levys a duty of $6 a ton, while 75% of the paper imported into the United States from Canada comes in duty free.

The attitude of the United States Government has led foreign governments to claim, under their favored-nation treaties, the same privileges accorded Canada. The United States general appraisers have held that the favored-nation clause is not binding. If the Customs Court should reverse this decision, the manufacturers of the United States believe that the paper market there would be flooded with a surplus production of all foreign countries. During the latter part of November a suit was instituted to test the constitutionality of this interpretation in the Board of United States General Appraisers by the Cliff Paper Company, of Niagara Falls. At present the paper market in the United States is receiving large quantities of paper and pulp from Sweden, Norway and Germany. The foreign manufacturers are paying duties on these importations under protest and are waiting the outcome of this test suit. It is estimated that should the Government lose the wood pulp case it would have to refund, to the importers, a sum well over $3,500,000.

Canada Is Making Strides.

Canada has certainly made strides during the past year or so in paper manufacturing. Mr. E. B. Biggar, of Toronto, a Toronto pulp and paper authority, says that Canada's growth of the two industries has exceeded that of any single nation in the world since wood became a raw material for paper making. A remarkable feature of this development has been the number and capacity of the new mills devoted to news-print, these mills representing the last word in mill designing, in capacity of paper machines and in rapidity of production. The following is a list of these news-print paper mills:—

	Daily capacity in tons of paper.
Powell River Company, B.C.	200
Dryden Timber and Power Company, Ont.	40
Spanish River Pulp and Paper Mills, Ontario	155
Ontario Pulp and Paper Company, Sturgeon Falls, Ont.	45
Sault Ste. Marie Mill, Ontario	200
International Falls Mill, Fort Frances, Ont.	100
Ontario Paper Company, Thorold	120
Price Brothers and Company, Jonqueires, Que.	150
Edwin Crabtree and Sons, Quebec	20
Smaller new mills and additions to old mills, say	170
	1,200

Thus there has been an increase of 1,200 tons per day in news-print. It is not strictly correct to say that this is the work of a calendar year, for some of these new mills were started in the latter part of 1911, while two of them are not yet finished and will not be in operation till the middle of 1913, but the increase which can be credited to 1912 will still be about a thousand tons per day.

Other Mills to Obtain Concessions.

Mr. John Norris, chairman of the committee on paper of the American Publishers' Association, says that the action of removing the restriction upon the exportation of pulpwood from the Crown lands of four large mills, viz.: Laurentide, Belgo-Canadian, Price Brothers and Company, and Wayagamac, insures the admission into the United States free of import duty of all the products of those mills, which have a producing capacity of 480 tons per day of news print and 50 tons per day of kraft paper.

"It is inevitable," he says, "that the other and smaller mills in that province will obtain a similar concession when they ask for it and that the news-print paper mills in Ontario will be forced by competition to obtain equal concessions from that province. British Columbia removed its restrictions last summer for the Powell River Mill.

"The action of the provincial governments is calculated to stimulate new production in Canada to supply the large and increasing market in the United States. The high duty which the United States has imposed on news-print paper made from Crown land wood, viz., $5.75 per ton, put a premium of $2 per cord on freehold wood in Quebec and placed a corresponding burden on the paper makers in Northern New York for all the wood they brought from Quebec.

Abolition of Import Duties.

"The abolition of import duties on the products of Crown lands removes the competition of the Canadian mills for wood from Canadian freehold lands. The action of the Provincial Council is a distinct advance toward a healthier condition of the paper industry, helpful to Canadian producers, and helpful to American paper makers who have been forced to pay the cost of the retaliatory methods of both governments. It is a substantial beginning toward the sweeping away of every restriction upon the interchange of wood and pulp and paper on both sides of the border."

The United States and Canada international paper situation is therefore decidedly interesting.

Mr. William Price, of Price Brothers, paper manufacturers, believes that the latest action of Sir Lomer Gouin in removing the embargo on paper cut from Crown lands will mean an increase of $1,000,000 per year to the manufacturers of Quebec Province. "In adopting this policy," Mr. Price stated, "the provincial Government has followed in the steps of the McBride Administration."

◆

SMALLER FIRE LOSS AT SYDNEY

During the past year the Sydney, N.B., fire department responded to one hundred and five calls of fire, the largest number of calls yet registered in one year. Seventy-one of these were bell alarms, the remaining thirty-four being telephone or messenger calls.

Of the bell alarms, eleven were in ward one; eighteen in ward two; nine in ward three; thirteen in ward four; twenty in ward five. Of the still alarms, six were from ward one; ten from ward two; nine from ward three; nine from ward four; one from ward five.

Thirteen of the alarms were false and four were unnecessary calls and three were of incendiary origin.

The fire loss for the year was smaller than last, being only $14,960. The fires causing the largest losses were as follows:

Unique Theatre	$8,000
Mr. Condon, Victoria Road	2,000
Hospital	1,600
J. H. Treen	8,000

STORED IN VANCOUVER ISLAND

Are Valuable Resources Awaiting Development—Growing Cities—Shipping and Other Facilities

BY ERNEST McGAFFEY.

As it is axiomatical that cities thrive as the surrounding untry develops, so it follows that the railway and trunk ad policy inaugurated by Sir Richard McBride and the ovincial government has been of vital importance to Van uver Island. The Premier of British Columbia has stimu ted development in these lines so greatly that it is no ex gration to say that railways and roads head the list of the ctors leading to progress all over the island.

The advent of the Canadian Northern Railway not only eant the opening up of large areas of virgin territory, but carried with it an immediate stimulus to the halibut and hale fisheries, with important capitalization and extension these industries. It also made accessible vast timber acts, iron deposits, etc.

The aggressive activities of the Canadian Pacific Rail ay through its island line of the Esquimault and Nanaimo ailways promises to revolutionize conditions along the east ast of Vancouver Island, and particularly along that por on of it represented in the rich Comax and Courtenay untry, a district not surpassed on the island for excellence a dairying and mixed farming centre. The entry of this e into the Alberni Valley and to Alberni and Port Alberni as also of great importance, as opening up a magnificent nber belt, and connecting with the west coast by way of e Alberni Canal. Coal, copper, and fisheries are also tribu ry to the Alberni district, and general tourist traffic has en increased by this branch.

All along the Alberni Canal the various communities Uchucklesit, Bamfield, Sechart, Ucluelet, Clayoquot, and her settlements, have felt the impetus afforded by the in ming of the Esquimault and Nanaimo Railway to the Al rni district.

Development along the line of the Esquimault and Na imo Railway from Victoria to Nanaimo is shown at every int. Probably the most apparent results are at Duncan, dysmith, and Nanaimo. At Duncan, in the Cowichan Val , much progress has been made recently in this model rming community.

mmunities Give Proof of Progress.

At Ladysmith, there are from 3,500 or 4,000 people, and future as a manufacturing and shipping point is assur , with its fine natural harbor, rail facilities, and adjacent ssibilities as a fruit-growing district.

Nanaimo is awakening to its possibilities. Its pay-roll ns into the hundreds of thousands from the near-by coal ines, large sawmilling interests and fisheries. Other in rests include stone quarries, timber, fisheries, manufac res, and an adjoining district of splendid possibilities r mixed farming, truck gardening, fruit growing, poultry ising and stock-farming, and fine shipping facilities. The ty has now about ten to twelve thousand population, and increasing rapidly in numbers.

Cumberland is also evidence of Vancouver Island's ad ncement, and with the Esquimault and Nanaimo Railway's tension, it will have connection with this line through the esent railways running from Cumberland to Union Bay. the central city of a coal-mining district, Cumberland will ow. Fine water-power on the Courtenay River and lum ering districts are near it.

Comox, Sidney, Courtenay, Chemainus, and other towns the east coast, Port Alberni and Alberni show steady owth. Port Alberni is the terminus of the Esquimault d Nanaimo Railway, and Alberni is only two miles further land. Both towns have good harbors; they will merge in ne.

ictoria's Fine Harbor.

Victoria is one of the leading ports of the Dominion. er new outer harbor, to be built by the Dominion govern ent, requires an initial outlay of $1,500,000, and will take 0,000,000 to complete it and the inner harbor improve ents.

Victoria's harbor is practically free from fog, and easy access and departure. Freight and passenger traffic has ubled in the past three years; in 1911 over 5,500 vessels rthed in its harbors. It is the coming terminal of five anscontinental railway systems, viz., Canadian Pacific ailway, Canadian Northern Railway, Grand Trunk Pacific, d Great Northern and Great Eastern Railway. As a manu cturing, commercial and residential city, its future is ight, and its tributary territory contains valuable natural sources ncluding the following:—

A supply of merchantable timber equivalent to about a llion feet per year for a hundred years. Then there is 1, 0,000 acres coal deposit controlled by one corporation. Iron is found at Sooke, Bugaboo Creek, Sarita, Nootka, Campbell River, Quatsino and other points.

Vancouver Island produced, according to the Tyee Copper Company manager's estimate, "about one-half of all the copper that has come from the entire Pacific coastal district during the five years ending April, 1910. There is five hundred thousand horse-power of water-power available, though present development is less than 50,000 horse-power

There is a supply of marble, brick clay, fire clay, gold and silver, quicksilver, talc, and various other metals and natural products, sand, gravel and building materials.

There are two cement plants, one fully equipped and running, and the other soon to be ready.

Agriculture, horticulture, fruit and berry growing, poultry-raising and live-stock breeding are profitable and being developed.

Valuable fisheries are also among the island's resources; whale fishing is carried on at Sechart and Kyuquot, controlled by Messrs. Mackenzie and Mann. Salmon is abundant. Halibut is caught in large quantities on the west coast. At Nanaimo the large herring industry is under the control of Japanese.

◆

WALL STREET'S VIEW OF BANK ACT REVISION

"In Canada banking reform has never been an acute political issue. The people have been generally satisfied with the banking system," says the Wall Street Journal, "largely because the note issue was elastic and accommodation could be obtained by solvent merchants at rates which were reasonable and which were nearly uniform throughout the Dominion. With the development of the country, the bankers have gotten together at each ten-year revision of the banking law and have consulted with the government as to changes called for by the progress of the country.

In spite of the fact that Canada has long been held up as the great example of successful note issue through a plurality of banks, there has been a steady tendency toward practical centralization, such as has occurred under similar conditions in Mexico. This tendency was clearly pointed out by Professor Joseph French Johnson, in his admirable monograph for the National Monetary Commission, in which he exhibited a sort of cross-section of Canadian banking by examination on the spot. The Bank of Montreal stands at the centre of the system and takes the initiative when important steps are necessary to avert the consequences of a failure or to maintain confidence. The reforms which are now pending between the bankers and the government tend still further toward the centralization of responsibility, by providing for central gold reserves and a more rigid system of audit, the latter under the direction of the banks in the main, but capable of being taken in hand by the government in case of need.

"It is not quite clear from the published reports what purpose the gold reserves are to serve except to create a certain fund of gold and Dominion notes, in the hands of trustees to strengthen the assets of the bank. Additional bank notes are apparently to be issued upon the central gold reserves, but if the amount cannot exceed such reserves, the only element of elasticity involved is the substitution of notes for coin, without any increase in the net circulation. Apparently, however, the provisions of the law of July 20, 1908, are not to be disturbed, permitting issues of notes during the crop-moving season under special tax to the amount of 15 per cent. of paid-up capital and reserve funds.

"In the stress of 1907 the bank note circulation was inadequate for moving the crops and a special dispensation was granted by the government for the issue of additional notes upon the deposit of securities, guaranteed by the Bank of Montreal. It was this expedient which led to legal sanction for emergency issues in the future under the act of 1908. The difficulty at that time appeared to be that the increase of banking capital had not kept pace with the expansion of the Northwest. The banks continued to establish branches in the new country wherever they were required, and to lend at reasonable rates to borrowers, but the demand for currency outran the legal limit of issue upon existing capital. This evil will be remedied in part perhaps by the notes which may be issued upon imports of gold, and a still greater security than heretofore will be introduced into the system as a whole by the manner in which the banks will be knit together by the more thorough method of auditing which is to be established."

◆

The Dominion Atlantic Railway, which is controlled by the Canadian Pacific Railway, will be practically reconstructed. At Yarmouth, the terminus of the Dominion Atlantic Railway, a new 520-foot modern wharf, with a warehouse will be built. Along the line ten wooden bridges will be replaced by modern steel structures.

RECENT FIRES

Monetary Times' Weekly Register of Fire Losses and Insurance

Hull, Ont.—January 2.—Notre Dame College. Loss $75. Cause, lighted match.

Vegreville, Alta.—December 27.—Prairie fire burnt stretch two miles long.

Kenora, Ont.—December 25.—Mrs. Parker's residence. Loss and cause unknown.

Victoria, N.B.—January 3.—McKinley house at Kingsclear. Loss and cause unknown.

Maple, Ont.—December 31.—Mr. S. Jarvis's saw mill. Loss and cause unknown.

Ashton, Ont.—December 29.—Mr. W. M. Collins' barn. Loss $1,800. Cause unknown.

Cobalt, Ont.—January 2.—Coniagas Mine blacksmith's shop. Loss $100. Cause unknown.

Ryley, Alta.—December 25.—Grand Trunk Pacific station. Loss about $6,000. Cause unknown.

Ottawa, Ont.—January 2.—Miss Clarke's book store, Elgin Street. Loss $500. Cause unknown.

Belmont, Man.—January 7.—Bank of British North America branch. Loss, $10,000. Cause unknown.

Humboldt, Sask.—December 22.—Mr. E. B. Rittenhouse's residence. Loss unknown. Cause, hot ashes.

Goderich, Ont.—December 31.—Mr. R. Davidson's residence, Bayfield Road. Loss and cause unknown.

North Portal Estevan, Sask.—Canadian Pacific Railway freight car. Loss unknown. Cause, car heater.

Laird, Sask.—January 2.—Mr. P. J. Leclair's building. Loss $3,000. Insurance $2,500. Cause unknown.

Nanton, Alta.—December 24.—Opera house owned by Mr. Ginther, Medicine Hat. Loss and cause unknown.

Alberton, P.E.I.—December 21.—Mrs. G. Murphey's two barns, Fahey Road. Loss and cause unknown.

Hazelton, B.C.—January 2.—Hudson Bay Company's store. Loss $50,000. Cause, supposed incendiary.

Mimico, Ont.—December 29.—Mr. J. H. McKelvie's residence, Church Street. Loss $3,000. Cause unknown.

Orillia, Ont.—January 7.—Canada Refining & Smelting Company's main building. Loss and cause unknown.

Lytton, B.C.—December 28.—Roman Catholic Church, Mr. A. Stephenson's residence. Loss and cause unknown.

South Battleford, Sask.—January 4.—Gaiety Theatre, Occidental Hotel, pool room, etc. Loss and cause unknown.

Ottawa, Ont.—January 6.—Mr. F. Lantier's residence, 94 Ellen Street. Loss slight. Cause, defective chimney.

Watford, Ont.—December 23.—Mr. Adams' residence, Erie Street. Loss unknown. Cause, defective chimney.

Moose Jaw, Sask.—December 29.—Mr. H. E. New's residence, 72 Alder Street. Loss slight. Cause, chimney fire.

Prince Albert, Sask.—December 31.—Mr. W. H. Gunn's residence, Sixth Avenue West. Loss $350. Cause unknown.

Shawinigan Lake, B.C.—December 26.—Messrs. Sylvester Brothers' residence. Loss $1,000. Insured. Cause unknown.

Chatham, Ont.—December 31.—Messrs. Cowan's shoe store, King Street. Loss $30,000. Insurance, $24,000. Cause unknown.

Lloydminster, Sask.—December 28.—Messrs. Crossley & Despard's livery barn. Loss and cause unknown. 7 horses were burned.

Georgeville, Que.—December 30.—Lake Hall boarding house on Lake Memphremagog. Loss $3,000. Cause, defective stove pipe.

St. Boniface, Man.—January 2.—Manitoba Rolling Mills. Loss, $200,000. Insurance, about one-third of loss. Cause, overheated furnaces.

Tamworth, Ont.—January 2.—Mr. T. Brown's barn. Loss and cause unknown. Mr. J. DeMarsh's barns. Loss and cause unknown.

Portage la Prairie, Man.—December 27.—Mr. [illegible]'s residence, Saskatchewan Avenue East. Loss unknown. Cause, wood placed in stove.

Lamont, Alta.—December 30.—Mr. J. Williams' residence. Loss includes $600 cash. Woodman's Hall. Loss $3,000. Insurance $1,500. Cause unknown.

Niagara Falls, Ont.—January 4.—Ontario Power Company's transformer building. Loss $10,000. Cause, short circuit brought about by violent storm.

Hamilton, Ont.—January 5.—92 King Street, occupied by Union Lunch, Ruby Cigar Factory and a millinery shop. Loss $3,000. Cause, supposed electrical defects.

Abbotsford, B.C.—December 28.—Alanson's hardware store, the Brooks general store, and the British Columbia Telephone Exchange office. Loss and cause unknown.

Waterford, N.B.—December 28.—Mrs. Worth's millinery store. Mr. A. Graham's residence. Mr. A. Bernard's residence. Loss, $8,000. Only insurance was Mrs. Worth, $500 on stock. Cause unknown.

Red Deer, Alta.—December 30.—Mr. R. L. Gaetz's residence. Loss, building $250; contents $100. Insurance, building, $1,500; contents $600; Canadian Fire and London and Lancashire Companies. Cause, defective furnace pipe.

Peterboro, Ont.—January 4.—Mr. T. C. Elliot, 112 McDonnell Street. Loss $9,000. Insurance, building $2,000; contents $2,000. Cause, supposed electrical defects. Chimney fires, 502 Water Street and 785 George Street. No loss.

Wapella, Sask.—January 2.—Queen's Hotel, Mr. J. Harris proprietor; jewelery store, Mr. H. Aikens proprietor; a drug store owned by Mr. J. McDonald and a small tailorshop. The large warehouse of the Imperial Oil Company was also destroyed. Loss, $150,000. Cause unknown.

West Lorne, Ont.—December 30.—Mr. H. Revell's barn, Tyrconnell. Loss, $300. Cause, tramps.

Woodstock, Ont.—January 1.—Frame play-house, owned by Mrs. G. Bain, 48 Wellington Street. Loss, building, $50; contents, $20. No insurance. Cause unknown.

January 2.—Messrs. Hay & Company's premises. Loss, $10. Cause, sparks. Canada Furniture Manufacturers, Limited. Loss, building, $25; contents, $100. Cause, spontaneous combustion.

Calgary, Alta.—December 30.—Canadian Pacific Railway power house at Ogden. Loss and cause unknown. Canadian Pacific Railway oil house. Loss $150. Cause, gasoline explosion. Underwood block, room occupied by Miss Ward. Loss unknown. Cause, gasoline explosion.

Brandon, Man.—December 25.—Rumley Products warehouse. Loss $200. Cause, defective heater.

December 30.—Mr. F. Muncey, 1118 Rosser Avenue. Loss unknown. Cause, overheated pipe. Imperial Dye Works, 319 Tenth Street. Loss unknown. Cause, hot ashes.

New Westminster, B.C.—December 29.—Mr. J. Lord's, 2nd and 3rd Avenue. Loss, building $200; contents $25. Cause, range; Mr. J. W. Cunningham's residence, 906 5th Street. Loss $150. Cause, defective hearth. Mr. A. Miller, Royal Avenue and 8th Street. Loss unknown. Cause, chimney fire.

St. Anthony, Kent County, N.B.—December 23.—Mrs. Allain's residence. Loss unknown. Insurance $300. Mr. P. Herbert's store. Loss $700, no insurance. Mr. Robichaud's loss $150. Insurance $1,000, Scottish Union. Mr. M. A. Cormier's loss was $100. Insurance $1,000, Royal. Cause, defective chimney.

Arcola, Sask.—January 4.—Mr. J. R. Mears' store, hardware and furniture. Loss, store building, $8,000; contents, $15,000; insurance, $12,000. Standard Aerated Water Company's plant and contents. Loss, Standard Aerated building, $3,000; machinery, $3,000; contents, $2,000. Building insured for $2,500. Cause unknown.

Edmonton, Alta.—December 23.—Edmonton Motor Boat Company's premises, 327 Ross Street. Loss $5,000. Cause, supposed incendiary. Collier rooming house, 42[illegible] Clara Street. Loss unknown. Cause, overheated pipes. Misericordia hospital. Chimney fire.

December 27.—Mr. Sims' tent residence and contents. Loss $300. Cause unknown.

Fort William, Ont.—January 3.—Mr. A. Vaccher's, 532 McIntosh Street. Loss, building $250; contents $250; covered by insurance. Cause, overheated stove.

January 4.—Mr. Tyrenty Kohut's residence, 1930 Home Avenue. Loss, building $200; contents $150. Cause, overheated stove pipe. Mr. J. Maseczuk, 1028 Home Avenue. Loss $100. Caused by previous fire.

Victoria, B.C.—December 24.—2532 Vancouver Street. Loss and cause unknown.

December 25.—525 Fishguard Street. Loss, $150. Insured with Aêtna, London, Liverpool and Globe Companies.

December 29.—Mr. J. Chisholm, residence, Carlin Street. Loss, $4,500. Insurance, $2,000. Mr. Tebo's residence, adjoining. Loss, $400. Cause, supposed incendiary.

Vancouver, B.C.—December 22.—Mr. G. Canary's dwelling. Loss, building, $350; contents, $334. Insurance, building, $1,000; contents, $500; National Union. Cause, probably match thrown in old fireplace. Adjusted by J. S. Rankin, Vancouver.

December 25.—Mr. T. J. Conway's residence. Loss, contents, $55. Insurance, Commercial Union, $400. Adjusted by J. S. Rankin, Vancouver.

December 30.—668 Powell Street. Loss and cause unknown. One death.

December 31.—Standard Tailoring Company, 68 Hastings Street West. Loss, $100. Cause, live coals.

Winnipeg, Man.—December 26.—Christ Church rectory, 285 Henry Avenue. Loss, unknown. Cause, defective chimney. 331 Union Avenue, Elmwood. Loss slight. Cause, Christmas decorations set alight.

December 27.—Mr. F. Delucas' café, 527 Notre Dame Avenue. Loss $500; covered by insurance in British and North Western Fire Insurance Company. Cause, Christmas decorations set alight.

December 30.—105 Alfred Avenue. Loss, $50. Cause, children playing with matches. 709 Pritchard Avenue. Loss, $100. Cause, hot stove pipe fell among matches.

January 7.—Canadian Pacific Railway baggage coach and contents. Cause, overheated stove pipe.

Montreal, Que.—December 30.—Mr. J. A. H. Dequoy's residence, 104 La Salle Avenue, Maisonneuve. Loss $500. Cause, furnace.

January 3.—Mr. Charbonneau's residence, 209 Maisonneuve. Loss and cause unknown.

January 6.—Messrs. Hutchison and Sticht's factory. Loss unknown. Cause, spark from boiler.

January 7.—Asile St. Vincent de Paul, Visitation and Lagauchetiere Streets. Loss $500. Cause unknown.

January 8.—West End incinerator. Loss $15. Cause, explosion of discarded picture film.

St. John, N.B.—January 3.—Messrs. Beatty & Johnson, Main Street. Loss $9,000. Insurance $5,000, $2,000 with Mr. G. O. D. Otty, $1,000 with Mr. Frank Fairweather, $1,000 with Mr. C. E. L. Jarvis, and $1,000 with Mr. Percy Clarke. Cause unknown. Messrs. Robertson, Foster and Smith, Limited, Dock Street. Loss and cause unknown. Messrs. J. H. Poole and Son, 18-26 Nelson Street. Messrs. W. Thompson & Company's stock of hides. Mr. G. S. DéForest's cheeses. The insurance on the building amounted to $10,000 in the Phoenix. Messrs. Robertson, Foster and Smith carried on their stock $15,000 in the Royal, $3,500 in L'Union, and $4,000 in the Liverpool and Manitoba. Mr. George S. DéForest, cheese, insured for $5,000 in the Phoenix. The loss on this has been estimated at $700. There were some hides also stored in the warehouse, owned by Mr. J. D. Dickinson, of Woodstock. These were insured in Messrs. Wm. Thomson and Company's office for $15,000. Loss and cause unknown; Mrs. Connolly's shed, 78 Moore Street. Loss slight, cause unknown; Canadian Pacific Railway House. Loss slight. Cause, oil thrown on fire.

January 5.—The American Steam Laundry, the Lordly Upholstering Establishment, the Fiber Roofing Company, and the small warehouse of the Tudhope Tire Company. Loss $28,000. Cause unknown; 2 tenement houses. Loss $2,000. Cause unknown.

Toronto, Ont.—December 25.—33 Queen Street West Loss, $25. Cause unknown. 82 Queen Street West. Loss, $50. Cause, mice and matches.

December 26.—11 Priscilla. Loss, stock, $100; building, $75. Cause, children and matches. Mr. J. Pickman's auto. Loss, $200. Cause, spark from engine.

December 28.—Rear 40 Arlington Avenue. Loss, contents, $375; building, $75. Cause, lantern. Two horses were burned. Messrs. G. H. Hees & Company, 276 Davenport Road. Loss, contents, $50; building, $50. Cause, washing brushes with gasoline. 357 Adelaide Street West. Loss, contents, $50; building, $75. Cause, defective chimney.

December 30.—311½ Dundas Street. Loss, stock, $50; building, $25. Cause, defective wire. 147 Nairn Avenue. Loss, contents, $100; building, $200. Cause unknown.

January 3.—54 Bulwer Street. Loss, $15. Cause, lighted match.

January 1.—Messrs. Maxwell and Stoddard's garage. 475 Spadina Avenue. Loss, stock $500. Cause, dropped match.

January 4.—Mrs. E. White's millinery store, 84 Queen Street East. Loss, $2,500. Cause, explosion of coal stove.

January 5.—Mr. R. Chadwick's, 1st floor, 247 Gerrard Street E. Loss, stock $50, building $500. Mr. R. Whittaker, 2nd floor. Loss $50. Cause, defective grate.

January 6.—264 Brock Avenue. Loss, stock $50, building $10. Cause, Christmas tree caught fire.

January 7.—13 Taylor Street. Loss, building $250; contents $150. Cause, defective stove pipe.

January 8.—115 University Avenue. Loss $25. Cause, thawing water pipe.

January 9.—Mr. Gough's residence, Clendennan Avenue. Loss and cause unknown.

◆

Application will be made to the Dominion Parliament at the present session for the incorporation of a life insurance company under the name of the Empire Life Insurance Company. Messrs. Borland, McIntyre and Borland, Saskatoon, are solicitors for the applicants.

Fort William's fire loss during 1912 was $106,423. In the 12 months, 122 alarms were sent in, and of these five were false. The amount lost by property owners last year was about $26,000. The Nault fire and the Arena fire was the cause for the loss being greater this year. The Nault fire cost the insurance companies approximately $50,000 and the Arena $25,000. The fire department had 118 runs last year. The great majority of the fires were caused by defective chimneys and minor causes. Gasoline played a prominent part in several of the fires.

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED.

Milltown, N.B.—Mr. J. Roy's residence. Loss $2,474. Insurance $1,600, Hartford Company. Cause, supposed chimney.

Montreal, Que.—December 30.—Mr. Donald McLennan's residence, 413 Argyle Avenue, Westmount. Loss and cause unknown.

St. John, N.B.—Mrs. Corlett's residence. Loss $170. Insurance, $500 Guardian. Cause, improperly protected stove pipe hole.

Jeffrey's Corners, N.B.—Mr. J. Lynch's grist mill. Loss $1,250. Insurance $450, New York Underwriters. Cause, supposed furnace.

Pititcodiac, N.B.—Mr. N. Hanlun's residence and contents. Loss $1,300. Insurance $940, Sun and Canadian. Cause unknown.

Green Point, N.B.—Mr. George C. Fournier's lobster storage and contents. Loss $1,600. Insurance, $800, Yorkshire. Cause unknown.

St. John, N.B.—Mr. S. P. Gerou's steam launch. Loss $8,000, insurance $3,000, Guardian and Norwich Union Companies. Cause unknown.

New Michel, B.C.—December 19.—H. Muellor. Loss, $1,500, contents $1,500. Insurance, building $1,000, Phœnix of London; contents, $1,000 Phœnix, $500 Guardian. B. Griffiths. Loss, building $1,200, contents $1,000. Insurance, building, $1,000 Phœnix. Cause unknown. Adjusted by J. S. Rankin, Vancouver.

Montreal, Que.—December 28.—Roofing mill and stock of Standard Paint Company of Canada at Blue Bonnets. Estimated loss $100,000. Insurance, Factories Insurance Company, $15,000; Factories Underwriters Policy, $30,000; Missisquoi and Rouville, $2,500; Lumber Insurance Company, $2,500; Central Canada Manufacturers Mutual, $7,500. Placed in New York, $100,000.

Sussex, N.B.—Block owned by Mr. George W. Fowler, M.P. His loss is estimated at $12,000, with insurance of $8,000. Mr. George Suttren, jeweler, suffered about $9,000 damage, with insurance of $5,500. Other losers are: Mr. Walter S. Fairweather, $2,000, on furniture; insurance, $1,250. Dr. A. B. Teakles, dentist, loss $2,000; insurance $1,500. Mr. George Hallett, photographer, loss $800; insurance $400. The Bank of New Brunswick suffered considerable damage from water.

Winnipeg, Man.—January 2.—Manitoba Rolling Mills. Rolling mill building total loss, value $40,000, insurance $25,000. Machinery, including boilers, pumps and machine shop equipment, value $110,000. Loss cannot be estimated until machinery is examined. Insurance $35,000. Patterns, total loss. Insurance $5,000. The insurance, amounting to $65,000, is placed through Oldfield, Kirby and Gardner, $52,000, Brydges and Waugh, $3,000, and Allan, Killam and McKay, $10,000. The following are the companies involved: North British, Norwich Union, Caledonian, Yorkshire, Western, New York Underwriters, North American, Liverpool, London and Globe, St. Paul, and the American Central.

Moncton, N.B.—The appraisal on the Marr and Melanson buildings and stock has been completed. The appraisers on the Marr buildings were Mr. A. C. Chapman for Mr. Marr, and Mr. R. C. Donald for the company. On the main building the full amount of insurance carried, $3,000, was allowed, while on the show cases and furniture in this building Mr. Marr was allowed $300 damages. On the small building at the rear, burned to the ground, $250, and on the barn and building occupied by H. C. Cameron, he received $50 and $75 respectively. This makes a total of $3,675. Of the $3,000 on Mr. Marr's big building, $2,000 was in the Sun and $1,000 in the Rimouski. The Melanson Company loss on building was adjusted at $200, by Mr. L. B. Read, of Moncton, acting for the Fidelity Underwriters and Northern, and Mr. E. Fairweather, of St. John, for the Anglo-American and United London and Scottish. The Melanson Company's loss on stock was adjusted by Messrs. E. Fairweather and C. E. L. Jarvis, of St. John. The amount was $200. Other companies having insurance on the Melanson Company stock were the Liverpool, London and Globe, and Hudson Bay Company, $500 each.

◆

NEW BRUNSWICK LIFE UNDERWRITERS

The annual meeting of the Life Underwriters' Association of New Brunswick was held on January 4th, in Bond's restaurant. Mr. W. B. Scarcliff, the retiring president, entertained the members at lunch, after which officers were elected as follows:—Mr. F. S. Farris, Excelsior Life, president; Mr. C. A. Owens, Federal Life, vice-president; Mr. R. L. Sipprell, Dominion, secretary; Mr. W. W. Titus, National, treasurer; Messrs. W. B. Scarcliff, London; G. W. Merritt, Great West; J. W. V. Lawlor, New York; G. C. Jordon, Sun, and P. A. Bohan, Metropolitan, executive.

The membership of the association is increasing.

MARINE INSURANCE ON ST. LAWRENCE ROUTE

Twenty-six Casualties Occurred During the Past Season—Attitude of Lloyds Underwriters

The St. Lawrence route last year, was the subject of considerable discussion among marine underwriters. Hon. J. D. Hazen, Minister of Marine, issued an invitation to Canadian shippers to prepare a plan of marine insurance, and said that the Dominion government would give a workable scheme substantial financial aid. A plan has not yet been prepared. The reply of Lloyds to this suggestion was that the steady increase in rates is due to the fact that underwriters cannot make the business pay; in other words, that their rates of premium are based on actual experience, and that even at the admittedly high level of premiums now ruling losses are very frequent and the business extremely hazardous

Competition Would Cut Rates.

As regards this attitude on the part of Lloyds underwriters, is stated, that if their views were wholly fallacious marine insurance rates to the St. Lawrence would have been cut down long ago by Continental competitors, who are nothing if not enterprising in such matters. Underwriters say, however, that whereas the cost of insurance against marine risks has been reduced on almost every other route in the world, as the result of Continental competition for the business, few attempts have been made to divert St. Lawrence risks from the London market, the experience of those underwriters who have endeavored to cater for such business at "cut-prices" being too well known to tempt others to follow their example.

List of Casualities.

The following table shows the number of accidents which occurred on that route during the past season of navigation:—

Name of Vessel.	Nature of Casualty.	Place of occurrence.	Whether investigation held or not and cause.
S.S. "William Hackett" ..	Sprung a lead and foundered	Grand River	No investigation held.
S.S. "Manchester Importer"	Stranded	White Island	Invest. held, Invest. could not be held, vessel having sailed. Report not sent in in time to Department.
Government Tug "Carmelia" and Coal Barge "Accomodation" belonging to Government	Collided	Off Sorel	Investigation held. Engines of tug not reversing when required.
S.S. "Empress of Britain" and S.S. "Helvetia"	Collided in fog—"Helvetia" sunk	Off Gaspé Coast	Investigation held. Excessive speed in fog.
Schooner "James Grey" ..	Sprung a leak and foundered	Magdalen Islands	No investigation held.
S.S. "Lake Champlain" ..	Grounded, no damage	Off Longue Pointe	Investigation held. Lights being obscured.
S.S. "Hungarian"	Steering gear having jammed the vessel grounded. No damage	St. Lawrence River	No investigation. Not necessary.
S.S. "Virginian"	Run into by tug "Lord Strathcona." Slight damage	Quebec	No investigation. Error of judgment.
S.S. "Bengore Head"	Stranded	Flowers Island, Strait of Belle Isle	Investigation held. Carelessness of Officer in charge.
S.S. "Mapleton"	Stranded	Opposite Longueil	Investigation to be held at close of navigation.
S.S. "Inishowen Head" ..	Grounded	Upper Traverse	Investigation pending.
S.S. "Manchester Importer"	Struck quay wall, slight damage	Quebec Harbor	Investigation pending.
S.S. "Bellona"	Stranded	Upper Traverse	Investigation held. Result not made public up to date.
"G.T.D." Wrecking Schooner	Collided with Lightship. Considerable damage ..	Upper Traverse	Investigation pending.
S.S. "Royal George"	Stranded	Isle of Orleans	Over confidence and reckless navigation of pilot.
Schooner "Ste. Celestine" .	Wrecked	Mille Vaches	Investigation pending.
S.S. "Gladstone"	Stranded	Isle of Orleans	Investigation held. Result not made public up to date.
S.S. "Boethic"	Grounded	Hare Island Shoal, River St. Lawrence	Investigation pending.
S.S. "Ausonia"	Grounded, no damage	Lower St. Lawrence	No investigation held, but pending.
S.S. "Laurentic"	Grounded. Damage not known	Below Quebec	No investigation held, but pending.
Schooner "Will"	Cut in two by S.S. "Montreal"	Off Isle of Orleans	Investigation pending.
S.S. "John J. Ketchum" ..	Grounded	Near Varennes	Investigation to be held at close of navigation
S.S. "Manchester Inventor"	Collided with iceberg	Strait of Belle Isle	No investigation held. Ship repaired at St. Johns, Nfld., and proceeded to United Kingdom.
S.S. "Panther"	Grounded	Lower St. Lawrence	Investigation to be held at close of navigation.
S.S. "Omaha"	Ashore. Slight damage ...	Near Bersimis	No investigation held, but pending.
S.S. "Canada"	Collided with fishing boat ..	[illegible]	

The season was a severe one for underwriters the world over, and as the above table indicates, the St. Lawrence did not escape its share of accidents, though fortunately there was no loss of life entailed by any mishap occurring between Montreal and the Gulf. There were no serious accidents above Quebec, though the Lake Champlain and the Hungarian were both aground on mud banks for a short time. Below Quebec marine accidents were as a rule more serious. They included the grounding of the Manchester Importer on White Island, for about half an hour, collision with submerged ice by the Manchester Inventor, some miles to the east of Belle Isle, a collision between the Empress of Britain and the collier Helvetia, between Cape Magdalen and Fame Point as a result of which the Helvetia was sunk, the collision of the Corsican with an iceberg [illegible] miles east of Belle Isle which necessitated her being fitted with a new stem, the grounding of the Bellona in the Upper Traverse, and of the Gladstone and Royal George on the Isle of Orleans.

A change in the pilotage system may be made during the current year. The insurance rates were not raised as a result of the accidents tabulated above.

ENERAL BANKRUPTCY COURT ADVOCATED

r. James Bicknell, K.C., Suggests Its Establishment and a Bankruptcy Law for the Dominion

As a result of the important paper read by Mr. James cknell, K.C., at the annual meeting of the Ontario Bar ssociation, supporting the establishment of a general nkruptcy Court and bankruptcy law for the Dominion, a mmittee of five has been appointed to draft a communi-tion to commercial bodies urging their co-operation. Mr. cknell pleaded for a uniform law.

"Creditors in Toronto and Montreal," he said, "should able to know that the remedies against a defaulting btor resident in Halifax are equally as good and as readily ailable as the remedies against a debtor in Vancouver.

"The administration of the bankruptcy laws should be mmitted to the Superior Courts of the various Provinces, d the judges of the various county and other local courts ould be Referees in Bankruptcy.

"Upon the commission of an act of bankruptcy the editors should have a summary and speedy remedy against e entire estate of the debtor.

tisfactory Account of Transactions.

"If a debtor is not able to give an adequate, reason-le and satisfactory account of the transactions causing s failure his future earnings should be impounded for the nefit of his past creditors until they have been sufficient pay a reasonable percentage upon the dollar of his editors' claims.

"A central bureau should be established in each pro-nce, presided over by a Superior Court judge, by whom bankruptcies would be supervised, thus ensuring both iformity and honesty of administration. The bankruptcy w should be available to all debtors, both traders and non-ders.

"Every debtor should be compelled to submit a full atement of his assets and liabilities and the reasons for s failure at the first meeting of his creditors, and should ereafter be examined in open court before a judge in the esence of his creditors, and should thereupon be called to swer all questions which might be put to him by counsel any of his creditors with regard to his affairs, and any evarication or failure to make a satisfactory explanation ould be punishable as contempt."

rliament Could Create Court.

"In the development of Canadian commerce transconti-ntal systems of railway transportation have been found cessary," Mr. Bicknell argued. "Similarly under the eration of the banking laws large banks have been created th their head offices in the monetary centres and branches read over the entire Dominion."

Mr. Bicknell stated that the Dominion Parliament has wer to constitute a Court of Bankruptcy having jurisdic-on over the entire Dominion, and continued: "That a nkruptcy law does not tend to increase the number of ilures is apparent from the comparison between the num r of failures in Canada during the past three years as ainst the number in the United States and England.

"In the United States in 1906 there were 15,690 failures, England and Wales during the same year there were 806, and in Canada in 1909 there was one failure to every 500 of the population, so that it would appear that there ere twice as many failures in a country without a bank-ptcy law as in analagous countries possessing such an actment.

"The particular point to be observed is that every debtor ust be compelled to submit to a public examination before judicial tribunal respecting his conduct, and he must be mpelled to explain the reasonable and probable causes of s failure in business: all undischarged bankrupts should incapable of obtaining credit and should be incapable holding public office and positions of trust."

◆

GREAT BRITAIN'S PRODUCTION

The British board of trade census of production shows, king all industries, including agriculture and the fish-ies, the output of the United Kingdom in 1907 was be-een £1.433.000.000 and £1.448.000.000.

Out of this total of nearly £1,500,000,000 sterling, over 400,000.000 worth of goods were exported, leaving the tput of British goods for the home market at more than 1,000,000,000.

The total income of the country is estimated at about 2.000.000.000, and £671,000,000 of this is received by the come tax paying class.

The imports of the United Kingdom are valued at £232,-0.000, and the total value of goods consumed in the United ingdom was between £1,633.000.000 and £1.833,000,000.

RAILROAD EXPENDITURE WILL BE HEAVY

All the Important Roads Have in Hand Lengthy Construction Programmes

President E. J. Chamberlin, speaking of construction work on the Grand Trunk Pacific Railway, says the problem from now on to completion will be wholly one of labor. "We expect to have the line in operation for through traffic by the beginning of 1915. It is just a question of getting the requisite amount of labor into the territory in which we are building; it is simply a matter of displacing so many million tons of earth and getting enough men to do it expeditiously. At present we have about 10,000 men at work."

This year the Canadian Northern Railway will construct 978 miles of road to complete the Transcontinental line. This mileage includes 350 miles from the summit of the Rockies to Lytton, B.C., and 300 miles along the north shore of Lake Superior.

Canadian Northern in Ontario.

Work will be commenced by the Canadian Northern Railway between Toronto and Hamilton during the spring. The right of way between Hamilton and Niagara Falls is being secured.

The company hopes to finish the road from Toronto to Niagara at the same time as the Canadian Northern Railway transcontinental. Provision for through connection with New York, via an American line, and bridge connection at Niagara Falls, remains to be made.

Satisfactory headway is being made in completing the line between Toronto and Ottawa.

The line between Ottawa and Montreal will be ready next spring, and early summer should see a Canadian Northern Railway passenger service between Toronto and Montreal.

Four Track System.

The Canadian Pacific Railway will shortly commence work on a four track system between Brandon and Fort William.

Forty million dollars will be expended in Montreal by the railways within the next two or three years. This large outlay is being undertaken by the Canadian Northern, the Grand Trunk, and the Canadian Pacific Railways, with the Canadian Northern assuming over half the expenditure. With the formal acceptance of the plans for the tunnelling of the mountain, the Canadian Northern Railway expect to commence operations early in the spring upon this task.

The Grand Trunk Railway expect to spend between $9,000,000 and $10,000,000 in the elevation of their tracks and in the building of a new station at Montreal.

Six New Lines.

The Canadian Pacific will apply for an act authorizing it to construct six new lines and extending time for completion of five others, already authorized.

It will also incorporate the Quebec, Portland and International Short Line, from La Patrie South to the International Boundary, following North River to Newport, Vt., to the main central in Eaton. This is supposed to be part of the plan for shortening the distance between Montreal and Portland over Main Central.

A new railway project is announced through application to incorporate the All Red Line Railway, from the Eastern boundary of the Province of Quebec westerly to Winnipeg, with branches to Ottawa, Port Arthur and Fort William.

◆

ANOTHER STEAMSHIP LINE FOR MONTREAL

That a new line of steamships will come to Montreal in the spring is the announcement of Mr. L. E. Geoffrion. Inquiries in shipping circles leads to the belief that the new line will be La Compagnie Generale Transatlantique. The French line applied for harbor accommodation last year, but none was available. Later they applied for a berth alongside the new shed, No. 16, on the Victoria Pier.

In connection with Montreal harbor matters, the Minister of Marine and Fisheries is considering a powerful type of Russian icebreaker with a view of maintaining winter navigation to at least as far as Quebec. He thinks that Montreal will never handle the grain trade she should but will see much of it diverted by way of Buffalo until the channel has been sufficiently improved and insurance rates lowered so as to make it worth while for shipowners to send their ships there in ballast for the sake of the heavy cargoes they can always take away.

Carmangay, Alta., has organized a volunteer fire brigade and its fire hall has been completed and equipped.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

International Nickel Company.—The International Nickel Company will double the capacity of its plant at Copper Cliff. Inside of two years, it is said, the plant will be turning out 100,000 tons.

Northern Ohio Traction and Light Company.—Gross passenger earnings of the Northern Ohio Traction and Light Company for the year 1912 were $2,494,791, an increase over 1911 of $23,426.

Western Canada Power Company.—A London cable states that it has become known there that certain negotiations have been opened up by which the British Columbia Electric expects to secure the controlling interest in the Western Canada Power.

Cape Breton Electric Company.—Earnings of the Cape Breton Electric Company, Limited, for the seven days ending December 21st, 1912, and for the corresponding period of preceding years were: 1912, $4,907; 1911, $4,871; increase, $36.

Nova Scotia Steel and Coal Company.—The Nova Scotia Steel and Coal Company has decided to open a new colliery at Sydney Mines, bringing its total up to six. The company's coal output, by this means will be increased from 850,000 to 1,000,000 tons annually.

Muskoka Navigation Company.—After having failed to pay any dividend for thirteen years, the Muskoka Navigation Company, Limited, at their annual meeting, held at Toronto, declared a dividend of five per cent. The reports presented were of a very satisfactory nature. Mr. Hugh C. McLean was re-elected president of the company, and the other officials were retained.

Duluth-Superior Traction Company.—As a result of the strike which commenced on September 9, earnings of the Duluth-Superior Traction Company for the year 1912 show a decrease of $49,439 from those of 1911. Gross passenger earnings for the year were $1,059,907 compared with $1,109,346, a decrease of 4.5 per cent. During December earnings were normal, and showed a good increase over December, 1911. December earnings were $98,395, against $93,908, an increase of $4,486, or 4.8 per cent.

Porcupine Townsite Mines Company.—An agreement between the shareholders of the Porcupine Townsite Mines Company and an English syndicate has been ratified by the former by which the Townsite Company will cease to exist and a new company will be formed in London with a capital of £75,000 in 300,000 shares of five shillings each. The stockholders in the Canadian company will receive one share for each ten shares now held. With $100,000 in the treasury the English company will start operations in the spring.

Canada Cement Company.—The Canada Cement Company, Limited, are promoting a line of steamers for the purpose of carrying coal from Cleveland to Montreal, and taking return cargoes of cement to the upper lakes as it requires a large quantity of United States coal at the different cement plants. The new company is to be known as the Canada Cement Transport, Limited, Mr. Levy McMillan being appointed marine superintendent of the Canada Cement Company, with jurisdiction over the steamship department.

St. Lawrence Refineries, Limited.—Bids of 87 have been made, it is said, for the common stock of the St. Lawrence Sugar Refineries, Limited, and of 101 for the preferred stock. It should be remembered, of course, that these bids would not go on record as the stock does not appear on the regular stock exchange list or on the unlisted department's list, so that the bids would simply be of a private character between brokers. If these bids were made it would indicate that the people who want the stock must be convinced of its earning powers, the price of the common being high for a non-dividend payer and the preferred being also high for a preference stock.

Macdonald Company, Limited.—At a meeting of the directors of the A. Macdonald Company, Limited, held at Winnipeg, Mr. G. P. Grant, president of the Dominion Bond Company, of Toronto, was elected president; Mr. T. H. Watson, of Toronto, vice-president, and Mr. H. C. Cowdry, secretary-treasurer. Mr. W. P. Riley, of Port Arthur, Ont., head of the Riley-Ramsey Company, was elected general manager, and it was decided to acquire his company. Following the directors' meeting, it was announced that there would be no change in the policy of the Macdonald Company. Announcement is said to be expected shortly of the declaration of a dividend. It is said that the company will pay 5 per cent.

Nipissing Mines, Limited.—During the month of December the Nipissing mined $460,052 net and shipped ore of an estimated net value of $261,396. Something of the extent of the Nipissing operations may be seen from the fact that during the month of December alone 440,000 ounces were mined from one vein, the Meyer. Another vein produced 130,000 ounces, another 54,000. During the month the high-grade mill treated 164 tons of ore and shipped 422,495 ounces of bullion. It is interesting to notice that in shaft 86, near Cart Lake, a small open vein containing more or less high-grade silver has been cut, and that the management thinks this may be the main vein. The character of the Seneca-Superior vein has made finds in this section of potential importance.

La Rose Mines, Limited.—During the past twelve months La Rose made a profit on operations of a million dollars: Production for the year 1912:—

Tons.	Ounces.	Gross.
3,327	2,900,000	$1,800,000
Approximate expenses		800,000
Profit		$1,000,000

At the end of the year La Rose had a surplus of $1,750,000, made up as follows:—

Cash on hand	$1,500,000
Ore in transit	250,000
	$1,750,000

Toronto Railway Company.—The Toronto Railway Company's receipts from passengers in 1912 amounted to $5,373,874, an increase of $572,556 over 1911. Calculating on an average fare of something in the neighborhood of four cents, the passengers carried during 1912 numbered about 132,000,000, as compared with 120,997,844 in 1911, and 109,415,264 in 1910. In other words, passenger traffic was ten per cent. bigger in numbers and in receipts than it was during 1911.

Toronto's total receipts from street railway percentage for the calendar year were $798,958.56, as compared with the following amounts for other years:—

1906.......................	$348,963.48
1907.......................	419,606.91
1908.......................	447,397.67
1909.......................	507,827.49
1910.......................	596,297.35
1911.......................	687,650.00
1912.......................	798,958.56

Besides the above percentages, the city of Toronto also receives a mileage rental of $800 per single track mile. For the past year the mileage checks total $90,950.40. In 1911, these receipts totalled $84,458.00; in 1910, $83,040.00. Adding mileage and percentage together, Toronto received from the company for 1912, $889,908.96.

EMPIRE TRADE MAP

A new map of the world has been compiled by Mr. Ben H. Morgan, F.R.S.S., F.R.C.I., of London, England. It shows at a glance the location of the world's principal primary products, the services of transport and intercommunication, while inset maps indicate to the export merchant and manufacturer where he can establish his agencies and branch houses with a view to working the British Empire's principal markets. The practical value of the map is obvious, while its educational possibilities and resultant advantages to the manufacturer, trader and citizen of empire, old or young, are invaluable.

Mr. Morgan's map is another link in the chain of services wielded by him for the good of the Empire. Messrs. W. and A. K. Johnston, geographical printers, have engraved and printed the trade and industrial map of the world, which will have a large demand.

BOND TENDERS INVITED

Monetary Times' Weekly Register of Information for Bond Dealers and Municipal Officials

Coderich, Ont.—The hydro-electric by-law carried.

Elmira, Ont.—The hydro-electric by-law was carried.

Owen Sound, Ont.—The hydro-electric by-law was passed.

Beaverton, Ont.—The hydro-electric by-law was carried.

Galt, Ont.—A by-law to raise $15,000 for water works exensions carried.

Richmond Hill, Ont.—A good roads appropriation of $7,00 was carried.

Winchester, Ont.—A money by-law to equip the town for ydro-electric power was carried.

Waterford, Ont.—The municipality of the village of Waterord carried a hydro-electric by-law.

Brampton, Ont.—A by-law authorizing the expenditure of $7,000 for the fire brigade was carried.

Berlin, Ont.—Two by-laws providing new $18,800 fire hall nd $6,000 municipal sheds were carried.
